

People's Republic of China: Civil Aviation Development Eleventh Five-Year Plan

ABSTRACT

Based on the 11th Five-Year civil aviation development guiding principles and goals, the Plan depicts the blueprint of the development of the People's Republic of China's civil aviation for the next 5 years from 6 aspects:

- (i) promoting the comprehensive development of civil aviation,
- (ii) vigorously enhancing the safety level of aviation,
- (iii) accelerating the construction of civil airports,
- (iv) building modern air traffic control system,
- (v) implementing the strategy of invigorating the industry through science and education and the strategy of enhancing the industry through talent, and
- (vi) deepening reform and opening up.

Meanwhile, the Plan introduces the completion status of the key indicators in the 10th Five-Year Plan; formulates the key indicators for the 11th Five-Year Plan on Civil Aviation; describes priority projects in 2006–2010 in relation to aviation safety, airport construction, air traffic control, education and training, as well as science and technology development.
