## *Project proposal*

«Training of experts of the transport and trade companies of CAREC member countries in essentials and modern methods of transport logistics»

- Current situation

- Project goals

- Project tasks

- Methodology

- Outcomes

# Current situation

1. Geographical position of Central Asian countries allows them to serve as a transport and economic bridge between the countries of West, the East, North and South.
2. Today trade and industrial companies of CAREC member countries have need of providing various services connected with transportation, storage, processing, customs clearance, freight insurance etc. and have come to understanding that transport logistics strategy should be the natural element of strategic planning of business just as marketing, financial, industrial and other strategies.
3. In the countries of region there is an acute shortage of professionals in transport logistics, but not in all educational institutions in Central Asian countries there are training programs and disciplines on transport logistics.

# Project goals

1. Providing knowledge of theory and practice in transport logistics to the specialists of transport companies and teachers of higher educational institutions.
2. Development of continuous training system for transport logistics specialty in the institutes with transport focus.

## Project tasks are:

1. To introduce a new Transport Logistics discipline into the training program of the institutes;
2. To develop training programs;
3. To conduct seminars in international transport logistics;
4. To arrange study-tours and trainings on probation in foreign logistics companies to study and gain knowledge and skills of organizing the transport process at international freight carriage;
5. To conduct round tables with involvement of industrial, transport and trade companies;
6. To create a specialized website;
7. To develop and publish training materials on transport logistics; to publish and distribute the information on international experience in freight carriage among the institutes.

# Methodology

**The project will be realized in two stages.**

**Stage one** is designed for the entrepreneurs and specialists of transport companies.

**Stage two** is designed for the teachers or institutes focusing on transport

## **Stage one** includes the following activities:

1. Conducting training seminars on transport logistics in international freight carriages sphere;
2. Arrangement of study tours and tours on probation in foreign logistics companies to study and gain knowledge and skills of organizing the transport process at international freight carriage;
3. Creation of a specialized website;
4. Translation into the native languages of CAREC countries of training materials on transport logistics and international freight carriages; publication and distribution of the information among the institutes;
5. Conducting of round tables with involvement of industrial, transport and trade companies with the view to discuss general problems and the ways of developing transport logistics in Uzbekistan.

## **Stage two** includes the following activities:

1. Development of training programs;
2. Introduction of a new Transport Logistics discipline into the training program of the institutes;
3. Organization of the training process in logistics in all types of transport – railway, sea/river, air and automobile transport;
4. Conducting of training courses in transport logistics including the sphere of international freight carriages;
5. Establishing of direct contacts among Uzbekistan and foreign institutes with transportation focus;
6. Creation of a specialized website;

7. Compilation, translation and study of international and national legal framework of CAREC countries, international statutory acts that regulate international freight carriage and transit;
8. Provision to teachers of deeper knowledge of external economic activity – the rules that define foreign trade freight transportation; affreightment of sea, river and air transport in line with national legislation and laws of foreign countries;
9. Study of the legal basis for transport contracts, rights and obligations of their parties, pretension issues and the problems of action proceedings on disputes concerning freight carriages by different types of transport means;
10. Conducting of a round table with involvement of the institute teachers and specialists of industrial, transport and trade companies for identify the needs for transport logistics training programs.

# Outcomes

Knowledge and skills in transport logistics which will be used in practice by transport companies.

Introduction of a new discipline into the training process of the institutes and creation of a continuous process of training the principles of transport logistics and training of new specialists.

Two groups of beneficiaries will have gained professional knowledge of transport logistics – these are the specialists of transport companies and institute teachers.
