# Valuing Services in Trade

Sebastian Saez Daria Taglioni and Claire Hollweg

June 25, 2014

## How?

methodology and instruments

Ingredients of countryspecific assessments:

- (i) indicators to raise awareness;
- (ii) use of **toolkit** to support comprehensive, systematic analysis; and
- (iii) customized

  analytical work on specific policy

# VALUING SERVICES IN TRADE A Competitiveness Diagnostic Toolkit

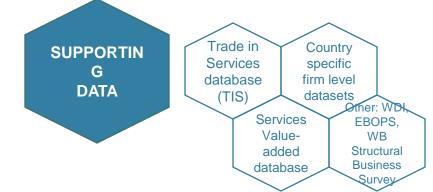

# MODULE 1 Focus on trade outcomes (performance, diversification, sophistication, and tradability)

# Quantification of services sector contribution to the competitiveness of the whole economy (services linkages)

MODULE 2

# MODULE 3 Assessment of potential for trade in services expansion and growth.

# MODULE 4 Diagnostics of the services sector (and trade) and policy

# Module 1

### MODULE 1

Focus on trade outcomes

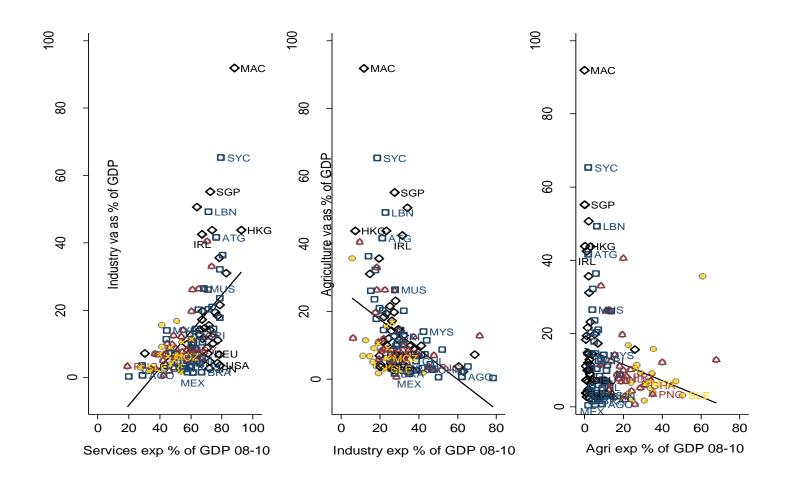

- Size and scope of services and historical analysis
- Using Trade in Services Database (TIS) and Services Value Added Database
- Using firm level data where possible!

Starts with basic country assessments

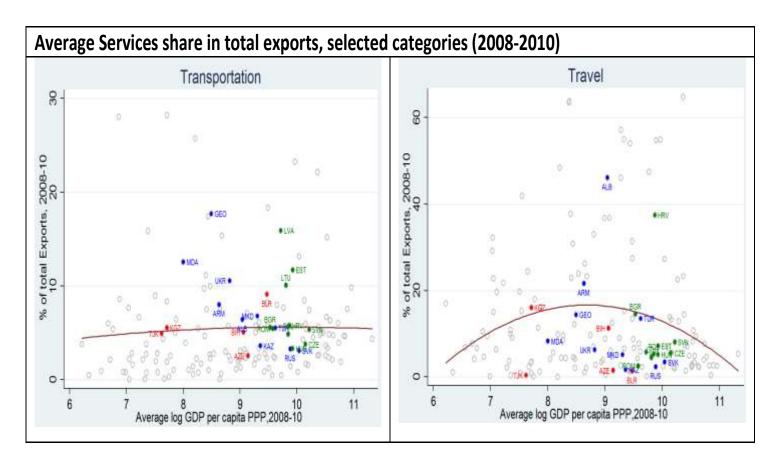

- Size: services trade relative to GDP; relative to value added; relative to peer countries; RCA, etc.
- Scope: export diversification; export growth; export sophistication, etc.

In what follows we present some examples

Although exports of goods increase, the share of industry in GDP declines. Similarly, although the share of exports of agriculture products to GDP increases, the share of agriculture value-added decreases. In contrast, larger shares of services exports in GDP appear to be associated with larger shares of value added in GDP.

# **Export sophistication and**

Export Sophistication and Income: 2002-04, 2006-08 2002-04 2006-08 Sophistication, 14 Sophistication, 14 Average Services Average 10 10 8 10 log GDP per capita, PPP 2006-08 log GDP per capita, PPP 2002-04 Source: IMF BOPS (BPM5)

# **Module 2**

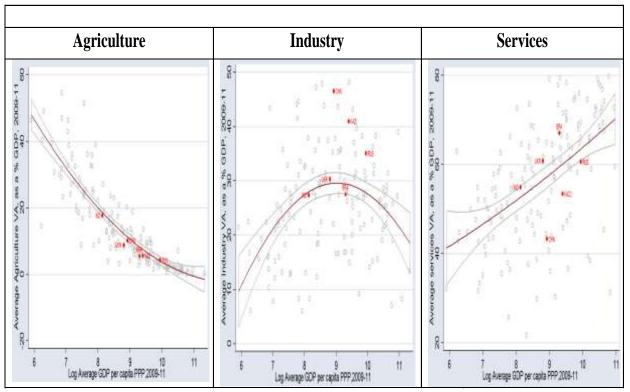

### MODULE 2

### **Services Sector and Overall Economic Performance**

### Focus on role of services in the domestic economy:

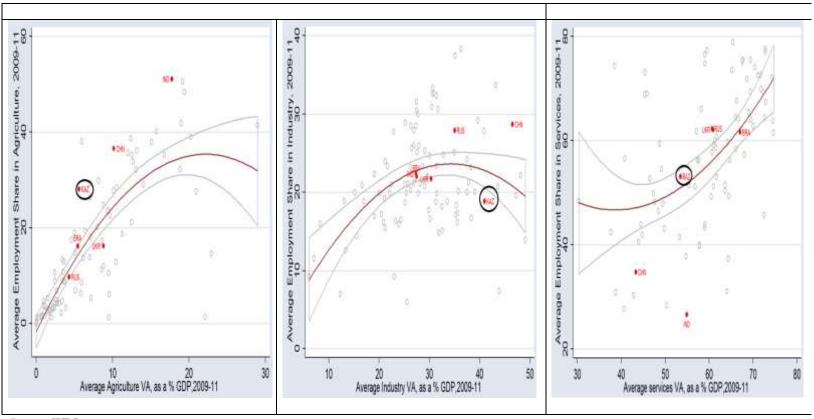

- A country's value added from services activity is a precondition to developing a services export sector.
- Cross-country comparisons of basic indicators, such as the share of a country's value added from services activity, provide a first assessment of the existence and importance of a domestic services sector.
- Concentrates on the value added services hold when they are domestically produced or exported.

### New data on trade in value-added

Across income groups, the share of value added in exports is much larger for services than for goods. For both machinery and other private services, high-income countries export most value added, although lower-middle-income countries are not far behind. For both machinery and business services, lower-middle-income countries export more value added than upper-middle income countries.

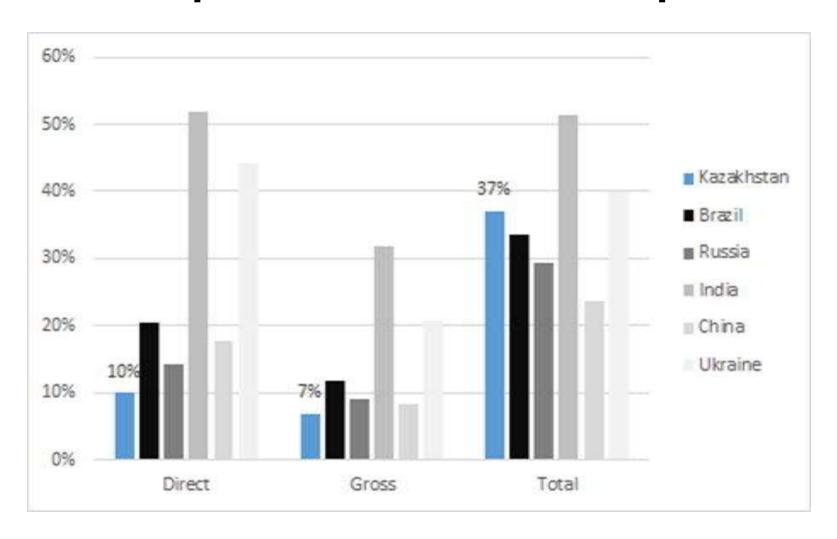

## New data on trade in value-added

Gross values and backward linkages are more important for goods, whereas net values and forward linkages are more relevant for services. Forward linkages indicate how much value added is carried by other sectors—that is, how important each (services or goods) sector is as an intermediate input for other sectors. Backward linkages show how much value added a sector carries from other sectors—that is, how much the sector embodies inputs that it will further process.

# How important are services exports?

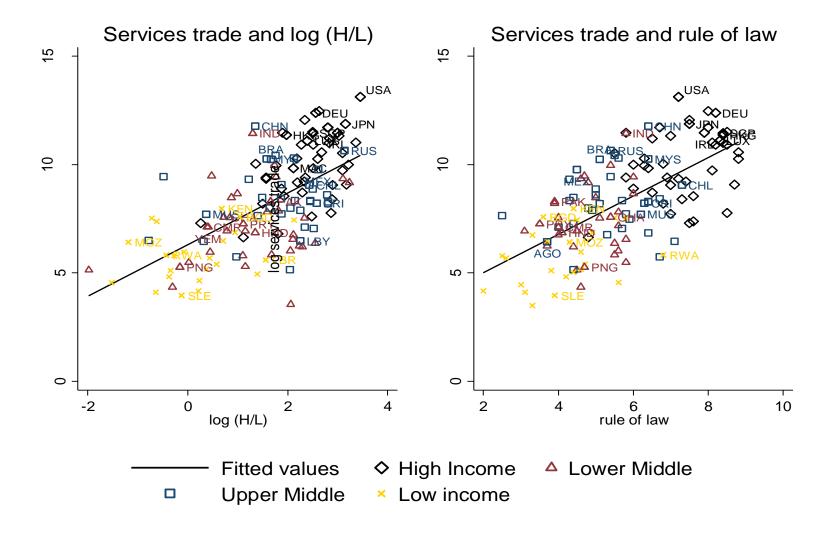

# Module 3

### MODULE 3

### Focus on trade potential

- Assesses different methods for trade potential
- Measures the "tradability" of a services (mode of delivery, employment, as inputs, through comparative advantage determinants)
- Gravity model using new database on bilateral services flows built for this toolkit

# **Analytical Approach**

# **Module 4**

### **MODULE 4**

### Focus on diagnostic analysis

- Assessing different policies affecting services trade
- Discusses issues at stake (i.e. market failures) of services
- Gives policy options with its constraints and risks
- Also discusses levers for change

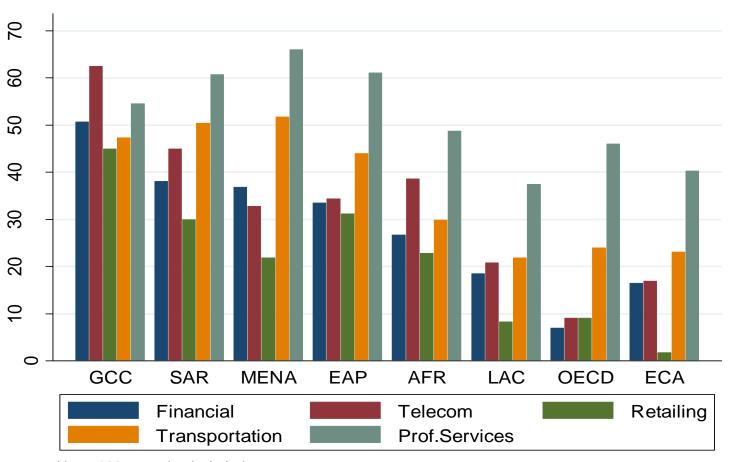

### Categories of policies

- Regulatory policy barriers.
- Trade barriers.
- Horizontal, or "domestic enabling factors".

# **Typology of trade barriers**

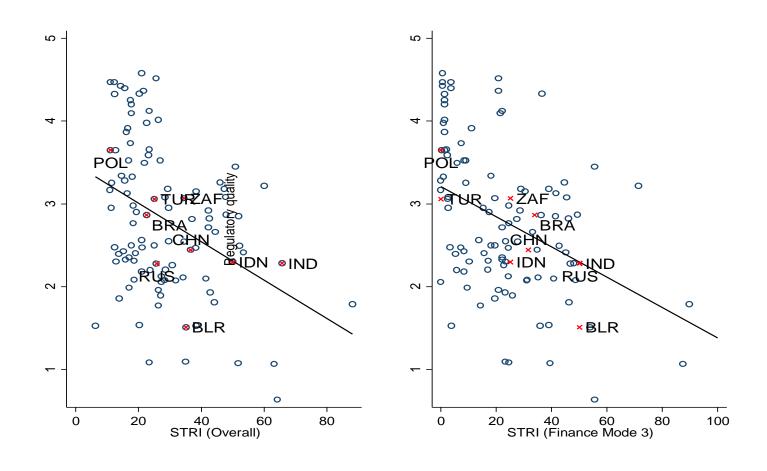

Type of	Direct / indirect effect?
barrier?	
Market access	Direct: discrimination of entering domestic market to foreign firm. Usually these restrictions are quantitative in nature
National	Direct: legal (de jure) restrictions against foreign firm, or indirect
treatment	discrimination through workings of applied non-discriminatory barrier (de facto)
Domestic regulation	Indirect: usually based on non-discriminatory regulations which do not explicitly target the foreign firm, but constitutes a <i>de facto</i> trade barrier
"Other" regulations	Indirect: not specifically categorized in any trade agreements, but may constitute nevertheless a barrier to trade by including a wider range of restrictions. These measures can be categorized as "conduct", i.e. on the ongoing workings of the firm.

# STRI index for country groups

Note: 103 countries included.

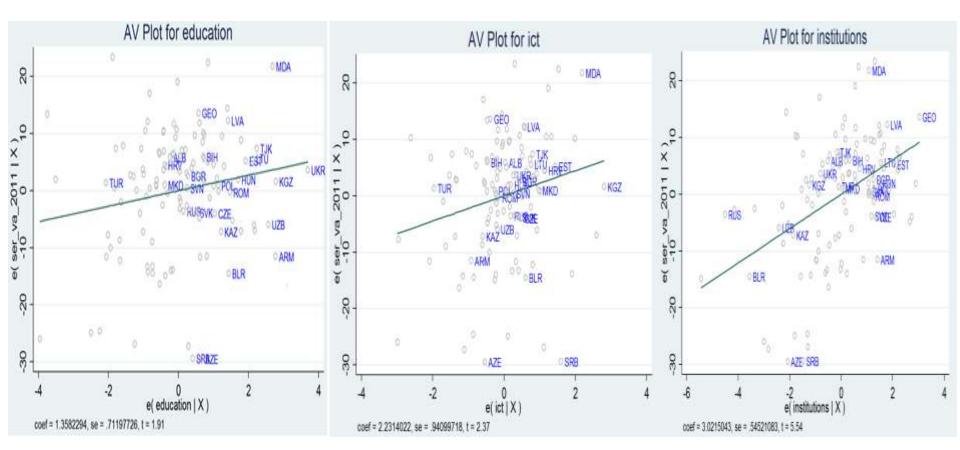

# Relationship between Services Trade Barriers and Regulation (2010)

# Typology of enabling factors

Policy area	Objective
Institutions	Arrangements of optimal governance of relationships
	between private economic parties, rather than those
	between private parties and the government
	(Acemoglu and Johnson, 2003)
Governance	Increasing the ability of governments to formulate and
	implement sound policies and regulations that allow
	and promote private sector development
Business environment	Compete and attract FDI in order to profit from export
	expansion and increased domestic competitiveness
	through MNC establishment.
Labour skills / human capital	Factor capacity increase to allow for sophisticated
·	services exports; climbing up the ladder of comparative
	advantage in services or from goods to services;
Management & Entrepreneur skills	Enhance the adoption and use of modern technologies
	which are essential for producing a service or good.
Trade-related Infrastructure	Reducing cost related to the delivery of goods and
1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	services, i.e. transportation costs, export costs,
	transaction costs or searching costs

### **Non Regulatory Determinants**

Source: KAM database and World Development Indicators.

### **New databases**

### Bilateral Services Trade Database

- Updates Francois et a. (2009), but with data gaps
- Merges data from OECD, UN, Eurostat and IMF
- "Best-available estimate" using mirror techniques
- 248 countries; 1981-2009; around 20 EBOPS sectors

### Services Value-added Database

- Provides value-added structures and trade linkages
- Using input-output matrixes from GTAP
- Developed and developing countries; 1992-2007
- Now we are updating to include 2011
