I. INTRODUCTION

A. Purpose

1. This study responds to a request from Senior Officials involved in the Central Asia Regional Economic Cooperation (CAREC) Program¹ for a consolidated picture of development projects in the CAREC region. This study focuses on the transport and trade facilitation sectors in 2000-2008. It seeks to provide as detailed a picture as possible of planned project outputs since 2000, and of future plans (investment, technical assistance, other). The study focuses on actions funded by multilateral, bilateral, and other development agencies active in the CAREC region. The information would provide an opportunity for all parties to share information and experience about their work in the region, seek more effective ways of coordination and explore options for further collaboration.

2. The study has three main purposes, to:

- (i) **Establish a database of planned project activities from 2000** and to present it in an easily accessible manner for the information of all interested parties. The starting point is the objectives set for each project. To be most effective, the database will need to be updated regularly with information about missing projects, achieved outputs of each project and new projects as they are planned and approved;
- (ii) **Present a preliminary analysis of the data** to identify gaps and areas of potential overlap in funding agency activities and plans. The identification of gaps and overlaps could help identify future priorities and opportunities for collaboration, and areas where activities might benefit from more effective coordination;
- (iii) **Identify some broad management and other issues** that may help improve the effectiveness of development activities in the region for the consideration of CAREC countries and funding agencies. If the database were to be extended to include a lessons-learned section, those issues are likely to increase.

3. The study is not a situational analysis of the transport and trade facilitation sub-sectors. It presents what funding agency-supported projects set out to do. What they achieved is not identified. Consequently the study is not an assessment of the status of each country with regard to the various

The purpose of this study is to compile a compendium of funding agency activities in the CAREC region during the period 2000-2008 in the transport and trade facilitation sectors.

The study includes:

- (i) **a data base of implemented and planned projects for the period 2000-2008 and beyond;**
- (ii) **a preliminary analysis of the data, identifying possible gaps and overlaps, and development opportunities;**
- (iii) **an identification of issues which might act as constraints to the efficiency and effectiveness of regional development activities.**

¹ The CAREC Program is a partnership of eight countries (Afghanistan, Azerbaijan, Kazakhstan, Kyrgyz Republic, Mongolia, People's Republic of China, Tajikistan, and Uzbekistan) and six multilateral institutions (Asian Development Bank, European Bank for Reconstruction and Development, International Monetary Fund, Islamic Development Bank, United Nations Development Programme, and World Bank). Its work is focused on four priority areas: transport, trade facilitation, trade policy and energy.

issues impacting on transport and trade facilitation. Undoubtedly, substantial progress has been made on a number of issues.

B. Organization of the Information

4. The database remains incomplete. It lacks entries for some funding agency interventions and outputs achieved. It also lacks basic information on government policy, legislative and regulatory frameworks governing the broad areas addressed by the study and the government-funded programs directed at implementing transport and trade facilitation policies. The data base therefore remains a work in progress.

5. The data and preliminary analyses are included as appendices. The appendices pay particular attention to gaps and overlaps in funding agency interventions and planned interventions. Opportunities for additional funding agency assistance are identified in the appendices and prioritized in this section of the study.

6. There are five appendices:

- (i) Four sections address the transport sub-sectors: road, rail and maritime, and air;
- (ii) The fifth addresses trade facilitation.

7. Each appendix includes a table of reported funding agency interventions in the sub-sector. The information provided includes project name, project number, details of planned outputs, implementation dates and funding. The information is organized by funding agency. To assist reference, each project is given a discrete study number. The sections on rail and roads are accompanied by maps showing the rail and road corridors being supported by four regional organizations: CAREC; Eurasian Economic Community (EurAsEc); Transport Corridors Europe, Caucasus and Central Asia (TRACECA); and United Nations Economic and Social Commission for Asia and the Pacific (UNESCAP).

8. There is a commentary on project activities in the period and future projects identified in the Implementation Action Plan for the CAREC Transport and Trade Facilitation Strategy². The commentary summarizes the planned activities of projects under a number of headings, allowing overlaps and gaps to be identified. Each project mentioned in the commentary is referenced to a discrete study number in the attached table.

C. Organization of Delivery of Funding agency Assistance

9. Funding agencies have adopted four broad approaches in the region. They have acted on a:

The data in this study presents background information for the completion of a situational analysis of trade and transport facilitation. Such a situational analysis might be a useful tool for future planning.

The data collected are discussed in more detail in five appendices:

- (i) Four on the transport sub-sectors of road, rail, maritime, and air;**
- (ii) One on trade facilitation.**

The appendices pay particular attention to gaps and overlaps in funding agency interventions and planned interventions. Opportunities for additional funding agency assistance are identified in the appendices and prioritized in this section.

Each appendix includes a table of reported funding agency interventions. The appendices on roads and rail include maps comparing the proposed road and rail networks of CAREC, EurAsEc, TRACECA and UNESCAP.

² Endorsed at the 7th Ministerial Conference on CAREC, November 2008.

- (i) Regional basis, in the form of technical assistance. This has involved working directly with individual institutions across a number of different countries to, for example, provide infrastructure like border control posts (BCP), communication and ICT systems; to produce studies about issues deemed important to countries in the region; or to provide training and awareness raising through workshops.

Generally, there did not appear to be strong linkages between regional technical assistance activities and individual technical assistance interventions at the country level. Much of the technical assistance delivered on a regional basis was relatively short term, with little obvious follow up to encourage sustainable outcomes;

- (ii) Group of countries basis, usually delivered to Central Asian Republics (CAR). This mode of assistance was particularly favored by bilateral funding agencies. This assistance tended to be long term (USAID's work on trade facilitation in CARs, for example, was supported for most of the period under review) and was focused on a relatively limited number of issues. The projects were usually managed out of local offices which improved flexibility to address opportunities as they became apparent;
- (iii) A two-country basis, which was infrequent and usually related to transport infrastructure loan projects which crossed an international boundary. Opportunities were taken in these projects to develop bilateral agreements between the countries concerned to facilitate trade relationships;
- (iv) A country basis. Loans were usually related to infrastructure improvements, though ADB and World Bank both supported loans to improve customs' operations in a number of countries. Technical assistance varied from very short term interventions to address a single issue to short term ones addressing a small range of issues over a period of up to 2 years.

10. There were no examples of an approach which combined a regional intervention and dovetailed it into single country work progressing the detail of an issue in each country.

Funding agencies have pursued four broad approaches to the delivery of assistance for transport and trade facilitation:

- (i) Through regional technical assistance. Particular attention is paid to training and awareness raising in this mode;**
- (ii) To a restricted group of countries like CARs, usually by bilateral funding agencies, on a reasonably long term basis;**
- (iii) To two adjacent countries, usually related to the delivery of cross-border infrastructure;**
- (iv) To one country on a loan or grant basis.**

A number of regional initiatives might be regarded as having potential for seeding individual initiatives at the country level.

II. COMPETITIVE TRANSPORT CORRIDORS

A. Background

11. The CAREC region stands at an important crossroads for surface transport between East Asia, Southeast Asia and South Asia, on one hand, and Europe and Russia on the other. Four regional associations - CAREC, EurAsEc, TRACECA and UNESCAP have identified networks of surface corridors for development to provide transport links between the markets of Europe, Russia and Asia. CAREC's and UNESCAP's transport corridors through the CAREC region run in two general directions: east/west between Europe and Asia and north, north-west/south, south-east between Russia and Asia. TRACECA is interested in east/west corridors and EurAsEc, north/south. Some east/west routes cross the Caspian Sea, requiring multimodal points to transfer freight from a land to a sea mode. There are differences between the rail and road networks of the four regional associations as illustrated on maps 1 and 2. The differences suggest that there might be a case for some consolidation to facilitate prioritization.

12. This chapter addresses the linked surface corridors of rail, road and sea, and of air. CAREC countries, with the exception of Afghanistan and PRC, inherited the infrastructure and operating and maintenance plant of the Former Soviet Union (FSU). The infrastructure system was designed without reference to future borders. As a result, major routes criss-cross borders. Consequently, there are pressures for new rail tracks and roads to be constructed so that major arterial routes between destinations in the same country do not cross international borders.

13. The countries also inherited centralized approaches to planning, with little experience of policy and program development. With independence, the FSU countries experienced a pronounced economic decline with the result that funds for infrastructure and plant maintenance were seriously limited. The condition of infrastructure and plant generally deteriorated during the early years of nationhood. There were also insufficient government funds to support the development of new management practices to make utility and other operations more efficient.

B. Assistance Priorities

14. In transport, funding agency activity has focused on five broad areas: (i) improvements in policy development and planning, (ii) construction and rehabilitation of infrastructure, (iii) provision of equipment, (iv) maintenance and (v) capacity development.

1. Policy and Planning

15. Funding agencies have paid a lot of attention paid to the development of transport master plans and sub-sector master plans, less on policy and legislative issues. Funding agencies assisted CAREC countries, with the exception of Kazakhstan and PRC, to develop transport master plans.

CAREC, EurAsEc, UNESCAP and TRACECA have established road and rail networks through the CAREC region. Essentially, they run in two directions: north/south and east/west.

Most CAREC participating countries inherited their infrastructure systems from the Former Soviet Union (FSU). The systems were not necessarily consistent with the new international borders.

Transport infrastructure tended to deteriorate markedly in the decade after independence with economies unable to afford the necessary maintenance requirements.

In transport, funding agencies have focused on five broad areas: improvements in policy development and planning; construction and rehabilitation of infrastructure; provision of equipment; maintenance; and capacity development.

The principal focus of the master plans has been on developing investment programs. The master plans have addressed policy and regulatory issues, particularly in Afghanistan and Azerbaijan. The policy thrust in Afghanistan has been to corporatize the management of the sector and place infrastructure on a self financing basis. That policy thrust has not been replicated in other countries, though there has been support for putting road maintenance on a self-financing basis through the establishment of road funds. There has also been one regional transport policy study. TRACECA funded technical assistance (TA) to harmonize policy agendas by establishing principles for national transport policies coordinated at the regional level and to develop legislative frameworks to reflect international and European Union standards. This work was to be accompanied by a short, medium and long-term action program for legislative action. How those action plans have been developed and implemented does not appear to be in the public domain. Establishment of an information centre to produce information about the outcomes of funding agency interventions might improve efficiency and help countries build on successful initiatives.

2. Construction and Rehabilitation

16. Based on activity, the major priorities of funding agencies for construction and rehabilitation have been airports and roads. Major international airports have been addressed with the construction of new terminals, an emphasis on bringing traffic control and air navigation equipment up to international standards and an increasing emphasis on improving regional airports with a number of projects proposed by CAREC in the near future.

17. There has been a large number of road construction and rehabilitation projects. Only in Afghanistan has there been a program systematically to construct or rehabilitate a regional road corridor. The program of 'ring road' and spurs leading to neighboring countries has largely been completed. Elsewhere, the tendency has been to concentrate on parts of corridors which experience the heaviest traffic. That has resulted in a situation in which no road corridor of any of the four regional organizations has been completely rehabilitated and upgraded. Each corridor still experiences a number of gaps where rehabilitation is required. The gaps are itemized in the Roads appendix.

18. The different networks of the four regional associations have expanded the number of roads competing for funding priority. The majority of investment has been focused on a core network (i.e. roads which appear on each of the association's networks) and on the roads in CAREC's corridors. There has also been significant investment activity on roads outside CAREC corridors but along corridors of one of the other associations, particularly in Azerbaijan. This situation leads to the question of the advisability of prioritizing a more limited set of corridors and completing them before moving to address other corridors. That would have the advantage of producing at least a number of efficient transport links to external markets. Such prioritization could also produce a focus for improving and consolidating the management of maintenance support along these corridors. That

Funding agencies have paid significant attention to the development of transport master plans. Their principal focus has been to develop investment programs.

In policy development, TRACECA has tried to harmonize policy agendas. How this work has progressed is not clear. There might be merit in maintaining some kind of data base to record outputs of initiatives and track outcomes.

Regulatory environments still have opportunities for improvement.

In construction and rehabilitation, airports and roads have been the major priority of funding agencies.

In roads, only Afghanistan has experienced a systematic program to rehabilitate all its regional roads. Elsewhere, no road corridor has been completely rehabilitated. Roads, however, outside CAREC corridors have been funded. If funding is limited, there might be a case for prioritizing a more limited set of corridors.

would, in turn, provide a model for maintenance management along other corridors and across the total road network of a country.

19. Construction and rehabilitation of railroads has received relatively less funding. Like roads, no corridor has been completely rehabilitated to a high standard. As with roads, there has been some investment funding and there is proposed funding for rail lines outside the CAREC corridors. Funding agency investment support produced a total of about 984 km. of improved, rehabilitated and new railroad in the period 2000-2008. There are proposals for slightly more than 3,900 km of improvements, rehabilitation and new railroads. The gaps which have neither been rehabilitated nor scheduled for rehabilitation are itemized in the Rail appendix. As with roads, there appears to be a case for prioritizing corridors and providing the finance to complete them. There remains the constraint of different railway gauges of FSU states and PRC and the eventual destination of some of the corridors.

20. Since 2001, the United Nations Special Programme for the Economies of Central Asia (SPECA) has been organizing demonstration runs of container block trains and international train services operating in its region. When they are produced, details about these demonstration runs may provide very interesting information to guide prioritization of the rail sector and determine the additional costs of moving freight along rail networks of different gauges.

21. There are four sea ports of interest to the proposed transport corridors of the four regional associations: Baku and Alyat in Azerbaijan, Aktau in Kazakhstan and Turkmenbashi in Turkmenistan. Alyat is being planned to address capacity constraints at Baku. There has been little investment activity directed at ports. There appears significant interest in the routes across the Caspian for the transport of oil products by rail.

3. Equipment

22. The funding of equipment purchases has focused mostly on the air and maritime sectors and on maintenance activities. Attention has been paid to improving communication and navigation equipment and training personnel to operate it so that it meets international certification standards in air and sea ports. Communication systems have also been supported to improve the rail systems of Azerbaijan, Uzbekistan and Mongolia.

23. The provision of ships, locomotives and rolling stock is beginning to receive priority from funding agencies. In the maritime sub-sector, CAREC has a proposal to lever private sector funding to purchase ferries in Azerbaijan. In rail, Uzbekistan, Azerbaijan and Mongolia have received finance to purchase locomotives. There are CAREC plans for further acquisitions in Uzbekistan and Kyrgyzstan. No country has had their locomotive fleets completely upgraded. That leaves all countries with significant opportunities for improving locomotive fleets. There has been assistance to Azerbaijan and Mongolia for rolling stock. Renewal of rolling stock does not appear to have been

No rail corridor has been completely modernized. As with roads, there is a case for concentrating on a more limited set of corridors.

There has been little funding agency activity on the sea corridor across the Caspian.

***Equipment* has predominantly been provided for road maintenance and for the air and maritime sectors.**

The provision of ships, locomotives and rolling stock is beginning to be prioritized by funding agencies. Air, rail and maritime fleets, however, remain old and inefficient, presenting significant opportunities for upgrading to modern fleet standards.

prioritized by funding agencies. Governments, generally, have not been able to afford significant purchases from their own funds. With much rolling stock being old, there are opportunities for further support to bring rolling stock into line with modern fleet standards. The same observations apply to track.

24. Maritime and rail utilities, because of their commercial orientation, self financing opportunities and control over own revenues and costs, should be of interest to EBRD and the private finance arms of International Finance Institutions (IFI). EBRD has been active in this area. The private arms of other IFIs have not been used as a source of financing. If there is to be encouragement of the private arms of IFIs to provide finance to utility companies, their due diligence reviews will require good financial and management accounting information. Consequently, if funding sources are to be expanded, there might be a strong case to support the commercialization of utilities and, initially, provide for effective financial and management accounting systems and improving management practices generally.

4. Maintenance

25. There has been little funding agency activity in maintenance in the air and maritime sub-sectors. Both sub-sectors might benefit from attention.

26. Rail maintenance has received some attention in Kazakhstan, Uzbekistan and Mongolia. The projects in Kazakhstan and Mongolia, however, started before 2000. CAREC has plans to upgrade maintenance facilities in Kyrgyzstan. As the railway sub-sector has tended to be underfunded, there are probably significant opportunities to address maintenance of both track and stock in all CAREC countries to ensure that operating standards are improved and safety is optimized.

27. The road sub-sector has received a significant amount of funding agency attention for maintenance. Some of it has been directed at encouraging outsourcing to the private sector. Assistance to a relatively inexperienced private sector has been limited to providing training for the preparation of tenders and administration of contracts. Management of a road fund to ensure funds are dedicated to maintenance has also been supported in a number of countries.

28. Approaches to maintenance have varied from country to country. In some, the public sector has received assistance. In others, governments have been encouraged to outsource maintenance to the private sector. In some countries, some funding agencies supported the public sector while others encouraged outsourcing to the private sector. It is not clear if there has been an objective anywhere to establish competition for maintenance between private and public sectors.

29. All CAREC countries had projects which supplied maintenance plant and equipment. Details of the plant were not always available. However, it appears that plant from a variety of manufacturers has been supplied. Significant attention did not seem to be paid to encourage the

Transport utilities should be of interest to the private sector arms of IFIs. There are opportunities for CAREC to encourage this interest. To enhance such an interest, a focus on effective financial and management accounting systems might warrant attention.

Maintenance has predominantly been directed at the road sector. The maritime and air sectors have not elicited much attention.

In road maintenance, there has been funding agency encouragement for its outsourcing to the private sector. There has, however, been little attention paid to upgrading the capacity of the private sector nor to establishing the conditions for the private sector to be able to compete fairly with the public sector for government and other contracts.

Maintenance plant supplied has often been provided from international suppliers. Authorities and operating companies, in their own purchase programs, acquire equipment from a different set of suppliers. The different sources can result in inefficient management of inventories of spare parts.

plant supplied to conform with the inventory policies an agency had. There is a risk when sourcing the same items of plant from a number of manufacturers, that spare parts inventories have to be increased to cover the different models, leading to inefficiencies in carrying costs and greater requirements for working capital.

30. In Mongolia and Uzbekistan, funding agency attention has been directed at establishing plant leasing companies. There did not appear to be prior pilot schemes to assess the effectiveness of privatizing plant for road maintenance. There might remain a number of constraints to the viability of such companies including under-capitalization, inappropriate tariff-setting and weak commercial management practices.

31. Where both the public and private sectors are competing for maintenance contracts, the question of contestability to ensure a level playing field is important. This might represent a gap in the advice provided by funding agencies to governments. A key aspect of contestability is to ensure that public sector organizations have no hidden or other subsidies, providing them with an unequal advantage in competitive bidding. In the move to outsourcing, the question of contestability might warrant increased attention so transitions can be managed effectively, especially those which commercialize public sector operations.

32. A second gap which might benefit from study is the overall make up of an effective road maintenance industry in a country. One aspect of CAREC road corridors is that they traverse long lengths of very lightly populated territory. Small companies might be able to undertake the requirements of routine maintenance. There remains the question, however, especially in isolated areas, of whether or not the volume of work would be sufficient to sustain a business financially. It is doubtful that small companies would have the capacity to undertake major maintenance work. Consequently, the development of a viable national road construction and maintenance capacity might be desirable.

5. Capacity Development

33. There was considerable funding agency attention to capacity development (CD) in each of the sub-sectors. Much of it was focused on training, the installation of ICT systems, and the development of financial accounting and management information systems. A wide spread of government agencies received attention. Each country experiences a different set of CD interventions, raising the question of the extent to which individual agencies are progressing in comparison with their peers in other CAREC countries.

34. Some attention was given to the corporate structures of operating companies in the air, maritime, and rail sectors. If government-owned joint stock companies or fully privatized companies represent the most viable commercial models for transport utilities, only a small proportion of utility companies have been assisted to commercialize. There is little activity preparing organizations for

There is no profile of the kind of road construction/maintenance company that would be able to manage the requirements of a sophisticated road corridor. Support might be required to develop national companies to acquire such capability.

In *capacity development*, much funding agency attention has been focused on training, the installation of ICT systems and the development of financial accounting and management information systems.

Some attention has been given to the corporate structures of operating companies in the air, maritime and rail sectors. There remain a number of opportunities to expand such assistance.

privatization. There remain a number of opportunities to continue such assistance. That assistance might be enhanced if there were improved opportunities for the newly commercialized/privatized companies to borrow from the private sector arms of IFIs.

35. In training, TRACECA has had a particular focus on training academies, providing support to national civil aviation training institutions, maritime academies, transport training establishments, as well as the development of training material for very senior public sector transport managers. TRACECA also assessed the potential for establishing a regional training centre for advanced transport training. There was some other funding agency support for training academies in particular countries, but this support was not extensive. There probably remain a number of opportunities for improvement in the quality of training establishments for the transport industry so that course and teaching standards are raised to best international practice.

36. ICT development has been prominent. A range of different issues have been addressed. Apart from the development of financial accounting and management information systems, rarely have two countries had a same issue addressed, indicating a program to encourage a consistent approach might be beneficial.

C. Funding Agency Foci

37. Funding agencies have a variety of interests in what areas they are prepared to support within the region and within countries. Some like, for example, EU's Border Management Programme for Central Asia (BOMCA) essentially have a 'product' such as integrated border management (IBM) or a number of products they promote and support across the sub-region in which they work. Others, like the multilaterals, articulate their country programs to work in a range of sectors with the result that they address a different set of issues in each of the countries they work in. A third approach which seems to be followed by organizations like TRACECA, seems to be to seed ideas and better practices into a region in the expectation that they will take root and lead to improved practices.

38. Tables 1 and 2 (at the back of this section) summarize the major foci of the work of funding agencies in transport by country based on the number of projects they are supporting.

D. Potential Overlaps

39. Overlaps are infrequent. There have been a number of examples of different funding agencies working on transport policy or plans in the same country. Where two different funding agencies work in the same area, there is a risk that they might approach an issue in a different way and introduce inconsistencies in what they produce. Funding agencies do not appear to have had a focus on developing the competencies of local policy officers to conduct policy development and

In training, TRACECA has provided substantial assistance to training establishments. There probably remain opportunities to build on this work.

A range of different issues have been addressed in ICT development resulting in a variety of computer systems from country to country. Compatibility of systems in the absence of ICT master plans remains an issue.

Funding agencies display a variety of interests in what issues they are prepared to support. Multilaterals have a tendency to spread their interests widely across the region but more narrowly at the country level as shown in tables 1 and 2 at the back of this report. They provide the main foci of donors and the donors working in each country on a given issue.

Potential overlaps are infrequent. The few include:

- (i) Different funding agencies working on transport policy or plans in the same country;**
- (ii) Workshops of different funding agencies discussing the same material, often at a too superficial level.**

planning studies themselves. In policy development, there are well accepted methodologies which take a policy unit through the set of steps that produce a draft policy on a particular issue.

40. Future CAREC planning has occasionally identified a priority for infrastructure improvements where rehabilitation work had already been done during 2000-2008. Frequent rehabilitation of particular infrastructure presents a case for greater support being directed at maintenance management and/or the design of the infrastructure. Upgrading regional airports might benefit from prioritization, especially in the context of an overall transport plan for a country.

41. Workshops present a number of examples of different funding agencies presenting material on the same subject, often, according to some participating countries, not relating the presentation of an issue to the interest and knowledge of an audience. There are occasional examples of different funding agencies providing training on the same subject matter to the same organization. There might be a case for focusing training interventions on specialized training institutes and continuing to support those institutes to maintain the standards of courses in line with best practice.

42. Where overlap would be an advantage is in the procurement of equipment for utility companies. Standardization of equipment and vehicle/rolling stock inventories could minimize maintenance costs or stock outs and contribute to the efficiency of a utility.

43. Other inconsistencies can lead to inefficiencies. They include:

- (i) A focus on public sector or private sector provision of maintenance;
- (ii) Provision of ICT equipment and systems prior to government's or agency's development of ICT master plans.

E. Gaps

44. There are a small number of possible gaps in infrastructure programs, including:

- (i) CAREC route 2b on Corridor 2 passes through Turkmenistan which is not a participating country in CAREC. As a consequence, there is no CAREC funding agency investment activity on the route;
- (ii) The sub-sector appendices record a number of gaps in modernization programs which, if the sub-sector is a priority, would benefit from attention. There might be a case for performing a prioritization exercise in each sub-sector with rail and regional airports possibly being addressed first (given the assumption that the principal priority of roads has already been addressed);

45. Laboratory equipment for quality control of road construction and maintenance has been provided to some countries, but not to others. Similarly, there has been a diverse set of issues addressed by technical assistance. If there is to be an even improvement of standards across the

Funding agencies have not provided much assistance to improve the policy development capacity of agencies.

There are instances of infrastructure requiring rehabilitation not long after similar work suggesting that subsequent projects should also pay attention to improving maintenance and/or designs.

There is a case for standardizing equipment to minimize the costs of spare part's inventories.

There have been inconsistencies in:

- (i) Funding agency approaches to developing road maintenance some focusing on public and others on private provision;**
- (ii) Providing ICT equipment without first ensuring that an ICT master plan is in place.**

There remain a number of gaps in rehabilitation and modernization plans for CAREC corridors, particularly in rail.

There has been uneven distribution of some assistance across the region with the result that some countries lag behind others. Policy development, laboratory equipment and capacity development are examples.

region, consistent capacity levels would be beneficial. Systematic planning for the extension of successful models to other countries may have merit. In a sense, this would involve 'product development', the value of which cannot be underestimated.

F. Opportunities

46. The efficiency of a network is dependent on each link and node operating as efficiently as all others. Consequently, one objective in developing competitive transport corridors is to ensure even development along each corridor, particularly on the 'soft' issues of regulatory frameworks and such like which can contribute positively or negatively to efficiency. Funding agency interventions, particularly on 'soft' issues, do not appear to be distributed evenly across all countries in the region. While some countries are able to fund the necessary developments themselves, the majority are not. **There might be a case for building on the performance monitoring which CAREC has already implemented to identify instances where additional support would assist a country advance an issue more effectively.** A situational analysis would show the different stages of development of each country on important issues and would provide the information to produce a timetable to synchronize overall development. That timetable might be based on the organizing principle that each of the headings in this chapter could be the focus of a program. One other area, road safety which is not discussed in this chapter but addressed in the appendix, might also warrant being included as a program.

Carefully monitoring progress in each country to identify instances where additional support might be helpful.

47. A number of opportunities have already been touched on in this chapter. The more important might include:

- (i) **Harmonize transport policies and regulatory environments to support effective corridor development.** The work might build on the promising initiatives started by TRACECA in the area of harmonization of policies. Such a policy review might also benefit from an examination of the questions of:
 - a. contestability in countries to encourage fair competition between private sector companies and state owned ones, especially in the provision of maintenance;
 - b. standardizing equipment requirements for rail, shipping and airport operators and maintenance companies to minimize maintenance costs, enhance maintenance capacity and maximize the efficiency of the networks;
- (ii) **Consider the advisability of prioritizing a more limited set of rail/road corridors and completing them before moving to address other corridors so that there do exist efficient transport links to Russia and Europe.** That would assist in the prioritization of other infrastructure developments such as BCPs and multi or intermodal nodes. Such a prioritization might also have the advantage of

Opportunities for consideration also include:

- (i) ***Harmonizing transport policies and regulatory environments to support effective corridor development;***

concentrating a focus on consolidating the improvement of maintenance support along these corridors and, subsequently, using these as models for maintenance management along other corridors and throughout a country. If Corridor 2 is one of the priorities, greater attention might then be given to the connections and transport links across the Caspian Sea. They might benefit from a particular study to ensure that the multimodal or intermodal facilities enable freight to transfer between rail/road and sea and back as efficiently as possible;

- (iii) **Conduct a training audit as a precursor to institutionalizing training to support best practice across corridors.** CAREC has recently conducted a training needs analysis. This will establish the demand for training. The training audit would determine how that demand is managed through training establishments and training units in agencies by examining issues like the adequacy of budgets, the capacity of training establishments and trainers, the planning of training, the processes whereby training establishments adjust to market needs and how they compare with best practice. The priority market might include work force planning, general management, policy development, regulation, contract management, maintenance management, road safety management and quality control;
- (iv) **Establish a data base of project outcomes as an input for forward planning and to enhance a management capacity to monitor progress systematically.** Such information should reveal disparities in the progress of particular countries to address certain issues. The information could help funding agencies assess options to support countries in relevant areas and help ensure consistency of service quality along corridors;
- (v) **Examine options to improve maintenance services across the CAREC region.** An examination of the attributes that have to be met by national companies seeking to supply road construction and maintenance services with a view to establishing a program to assist prospective companies develop those attributes. They particularly concern size and working capital required for maintaining long lengths of road corridors.

- (ii) ***Considering the advisability of prioritizing a more limited set of rail/road corridors and completing them so concrete results can be delivered at an earlier stage;***
- (iii) ***Conducting a training audit as a precursor to institutionalizing training to support best practice across corridors;***
- (iv) ***Establishing a data base of project outcomes as an input for forward planning and to enhance a management capacity to monitor progress systematically;***
- (v) ***Examining options to improve maintenance services across the CAREC region with a view to establishing a program to secure appropriate capacity.***

III. TRADE FACILITATION

A. Background

48. While the previous chapter was concerned with improving the links in the CAREC network, this chapter examines progress in operations at the nodes. Links were predominantly concerned with infrastructure improvements. While infrastructure does have an important place in the efficiency of nodes, it is less central than in the links. In a sense, process is 'king' at the nodes. When freight reaches a node like a border crossing point, it only has to travel a short distance, but the time taken to process the paper work can be extensive. The process is important because a significant amount of the annual tax take is collected at nodes. Countries need to ensure that entry of people and goods meet legal requirements. Addressing this issue has costs. Efficiency requires that the time taken to pass through such nodes is as minimal as possible.

49. The World Bank's Logistics Performance Index (LPI) suggests there remains considerable work to make CAREC corridors competitive. The index rates 150 countries against seven categories³. CAREC countries, other than PRC, occupy the lower reaches of the index. For freight routed through Russia, there is added cost inefficiency in that Russia is ranked 99.

50. Figure 1 compares the scores of CAREC countries on the index. Singapore, which scores highest in the index, is added for comparative purposes. Only in domestic logistics' costs is there a meeting point on costs with Singapore and PRC.

**CAREC Countries in the World Bank
Logistics Performance Index, 2007**

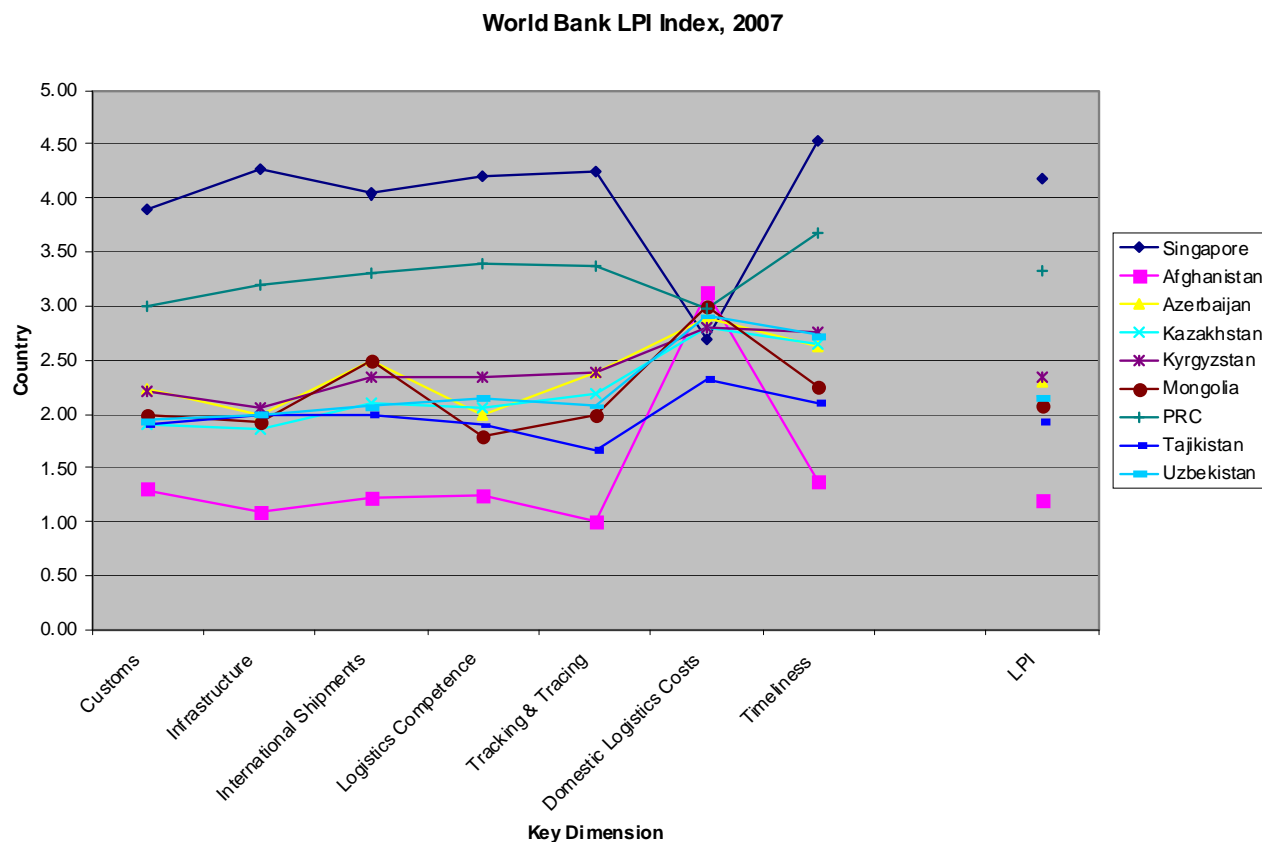

Participating Country	LPI Position
PRC	30
Kyrgyzstan	103
Azerbaijan	111
Uzbekistan	129
Kazakhstan	133
Mongolia	136
Tajikistan	146
Afghanistan	150

Transport concerns links between nodes. Trade facilitation concerns operations at nodes. While transport tends to concentrate on 'hard' infrastructure, trade facilitation tends to concentrate on 'soft' issues like policy development, management effectiveness, process engineering and harmonization.

The World Bank's Logistics Performance Index (LPI) has rated the performance of CAREC countries, apart from PRC, poorly. They are all in the bottom third for performance with most in the bottom quartile.

³ a) *Customs*, which concerns the effectiveness of customs and other border procedures; b) *Infrastructure*, which relates to the quality of transport and IT infrastructure for logistics; c) *International shipments*, which concerns the ease and affordability of arranging shipments; d) *Logistics competence*, which concerns the competence of the local logistics industry (which includes transport operators and customs brokers); e) *Tracking and tracing*, addresses the ability to track and trace shipments; f) *Domestic logistics costs*, relate to local transportation, terminal handling and warehousing costs; g) *Timeliness*, is that of shipments in reaching their destination.

Figure 1: Scores of Participating Countries in the World Bank Logistics Performance Index, 2007

Other than on local logistics costs, CAREC countries need to progress a number of issues.

51. Process at nodes is affected by a number of issues. Policy is important in determining a range of matters including what goods are permitted to enter a country, what transit charges are levied for goods in transit, how vehicles carrying such goods are to be managed, what tariffs and duties apply to goods destined for a country, how taxes and duties are to be collected, what documentation is required to clear passage of goods and, among a number of other things, what international conventions a country seeks accession to. The most important convention is WTO, membership of which is dependent on a country aligning its international and domestic trade policies

Customs has a central role in trade facilitation. Appropriate policies are critical. Infrastructure needs to be developed for appropriately designed border crossing facilities and multimodal and intermodal transport facilities and logistics centers.

and laws with WTO rules. A major focus of funding agency activity has been to assist countries' progress to accession.

52. Customs authorities have a central role in processing freight and people through nodes. A number of other agencies also have responsibilities including border control, transport control, veterinary/phytosanitary control and sanitary/epidemiological control. These agencies need to be brought into the overall process of clearing freight so that they do not contribute negatively to the efficiency of the process.

53. There are two areas of infrastructure which contribute to the efficiency of nodes: the physical infrastructure provided for border crossing posts (BCP) and the multi or intermodal infrastructure provided for the transshipment of freight from one mode of transport to another. Associated with multimodal and intermodal transport is the idea of a logistics centre which provides freight agencies with all the amenities they require to carry out their businesses.

54. Customs cooperation has been the core trade facilitation program of CAREC with the Customs Cooperation Committee serving as a regional forum to address issues of common interest. The work program has focused on five priority areas:

- (i) Simplification and harmonization of customs' procedures;
- (ii) ICT for customs modernization and data exchange;
- (iii) Risk management and post entry audit;
- (iv) Joint customs' control and one stop services;
- (v) Regional transit development with accession to the TIR convention being a priority interest.

Customs cooperation is CAREC's core trade facilitation program.

55. This chapter addresses the nodes. All CAREC countries, with the exception of Afghanistan and PRC, have inherited the bureaucratic organizations and approach to bureaucratic work which developed in the FSU. Customer service and efficiency were not part of the cultures of such organizations. Consequently, to make trade facilitation efficient, the bureaucratic organizations concerned are undergoing organizational and cultural changes at the same time that processes and procedures are made more efficient. As part of that transformation, CAREC has recently undertaken a training needs analysis for stakeholders in trade facilitation, both in government and the private sector.

B. Assistance Priorities

56. In trade facilitation, the activities of funding agencies have been focused on eight predominant areas: (i) policy and enabling environments; (ii) customs and border crossing posts; (iii) integrated border management; (iv) metrology, standards and product certification; (v) multimodal

and intermodal facilities and logistics centers; (vi) transit; (vii) information; and (viii) capacity development.

1. Policy and Enabling Environments

57. Much of the work on policy issues and regulatory environments has been related to WTO accession. PRC, Kyrgyzstan and Mongolia have gained accession. Accession assistance has been provided to all other countries, other than Afghanistan which has just started the process of accession. A range of laws have been addressed in each country by different funding agencies. Customs codes have been revised in all countries other than Afghanistan. In CARs, USAID has played a prominent role in legislative change. The quality of funding agency coordination is reported to vary from country to country. Formal coordination involving government counterparts is reported as not strong.

58. With all CAREC countries (other than PRC) landlocked, efficient transport benefits from harmonized policies. That suggests that a regional approach to policy development might have some benefits over assistance at a country level only. Country level work risks policy being developed independently and uniquely. There does not appear to be an overarching mechanism to track progress on policy development across the range of trade facilitation issues and its outputs in legislative and regulatory change. Providing such a mechanism might be an area of opportunity. There have been two regional initiatives which provide building blocks for consistent policy development. A TRACECA project set out to establish principles for national transport policies coordinated at the regional level and to develop short, medium and long-term action programs for legislative action. UNDP provided similar assistance on trade, transport and transit issues.

59. Funding agency assistance has resulted in significant legislative action on the part of CAREC participating countries. What is less in evidence is assistance to convert the legislation into appropriate regulatory frameworks and produce the enabling environments which contribute to trade facilitation.

2. Border Crossing Posts

60. With border management, priority has been given to facilities, equipment and procedures at border crossing posts. Principles have also been enunciated by some regional organizations. For example, EurAsEc has a policy of only having border guards and customs officials at BCPs with other agencies being located away from a border.

61. Over the past seven years, a significant amount of funding has been directed at border guards as international attention became focused on border security. There has been a major infrastructure building program at border crossings in some countries. The design of BCPs does contribute to operational efficiency. There might be opportunities for funding agencies to work to a

Much of the work on *policy issues and enabling environments* has been related to WTO accession. Legislative change in each country has been addressed by different funding agencies, with particular attention on the revision of customs codes.

Trade facilitation might benefit from a more regional approach to policy development. TRACECA followed such an approach, for example, in developing principles for national transport policies. There does not appear to be an overarching mechanism to draw together different strands of policy development across the region and produce compatibility.

While there has been significant progress on legislative change, there remain opportunities to improve enabling environments.

Much attention has been given to upgrading *border crossing posts* (BCP), especially in the vicinity of Afghanistan. Elsewhere few BCPs have had their facilities upgraded, with rail BCPs receiving little attention and providing significant investment opportunities in buildings and facilities in Kazakhstan and Mongolia and at almost all rail border crossing points.

common design for BCPs which accommodate all agency requirements while facilitating the flow of people and documentation.

62. There are 28 border posts on CAREC corridors. In Afghanistan, all the major BCPs with Pakistan, Iran, Turkmenistan, Uzbekistan and Tajikistan have had funding for infrastructure and equipment. Elsewhere very few BCPs on CAREC corridors have had their buildings and facilities upgraded. Rail BCPs have received significantly less attention than roads. The major funding agency programs operating in border regions are not integrated with CAREC. Consequently, coordination is not conspicuous though CAREC focal points do attend conferences. There appears still to be significant investment opportunities for improving buildings and facilities at BCPs in Kazakhstan, Mongolia and at almost all rail border crossing points.

63. BCPs have complex needs for equipment if they are to operate efficiently and effectively. Equipment includes communications and ICT equipment to enable transactions to be processed quickly and for information to be passed to other agencies in the country concerned and in neighboring countries. BCPs also have needs for scanning and other checking equipment. Standardization of equipment might be as important for information flows as for maintenance and operational efficiency. Similarly, there would be advantages in encouraging the adoption of a common platform for exchange of data to ensure compatibility of hardware and software.

64. A number of funding agencies are working in border management. BOMCA, in association with UNDP is leading a program to construct BCPs and introduce integrated border management (IBM). The US military has played a part in many locations, particularly those in the vicinity of Afghanistan. ADB, World Bank, GTZ and USAID are prominent players in assisting customs departments improve their processes. Other agencies, like departments of health and agriculture have not received the same level of attention. There might be advantages in bringing together all these threads. CAREC has identified two projects in its forward plans, one to improve technology and the second to determine needs for and invest in weighing, inspection and scanning, and material handling equipment, warehouses, inspection yards, cross-docking facilities, and ICT systems. These projects might warrant early implementation in light of current activity. A systematic inventory of the equipment each BCP needs might be helpful so that funding agencies can work to a standardized inventory and suppliers can have a reasonable volume of equipment installed so that they invest in responsive levels of customer support.

3. Integrated Border Management

65. Integrated border management concerns the organization of all border agency activities to facilitate the movement of persons and goods while maintaining secure borders. It requires agencies to reach a certain level of capacity so that all are able to combine efficiently to achieve an effective level of border management. The drive for IBM has focused on border forces, with BOMCA being

BCPs have complex needs for communications, ICT, scanning and checking equipment. Standardizing inventories might be as important for information flows as for maintenance and operational efficiency.

Most assistance at border crossings has been directed at border guards and customs. There are opportunities for including other departments with responsibilities for trade facilitation like health and agriculture in the broad process of organizational and process change.

Integrated border management (IBM) activities generally have tended to focus on border guards and customs.

prominent. CAREC has supported Joint Customs Control activities at a number of BCPs. There might be an important role for CAREC to play in the development of IBM, especially to assist customs services to take a prominent role in developing and implementing national strategies in border management and working closely with other agencies with responsibilities for border management.

66. There has been significant funding agency activity in work to improve customs' operations. A particular focus has been on departmental headquarters and developing central data banks and information systems. In ICT, some departments have preferred to develop their own systems architecture themselves while others have installed available proprietary software. There have been a number of regional initiatives. In 2004, an ADB regional initiative helped develop master plans for the capacity development of customs departments with measures such as reengineering of customs business practices, change management, training of staff, and consultation with private sector stakeholders. TRACECA has recently produced recommendations to improve border crossing procedures as they relate to railways and on addressing restrictive practices. These initiatives might merit further support by CAREC if their outputs are deemed promising by participating countries.

67. A major area of support in IBM has been towards establishing single windows and single administrative documents, one of CAREC's five priority areas. In CARs, the work is in large part led by GTZ. The effectiveness of these initiatives depends to a great extent on robust ICT systems being in place, being compatible and officials being competent to use them. The drive for a single window in CARs appears, at least in part, to operate separately from the work on re-engineering departmental processes and systems and raising the competencies of staff.

68. The harmonization of customs' procedures is a CAREC priority area. CAREC is currently implementing a project which seeks to integrate the development of a single window and a one stop shop for submitting documentation on a regional basis. Another project will examine the nature of mandate needed for a single window across the region and present a workplan for its establishment. CAREC also plans to test the concept by establishing a single window in one border post processing a high volume of cargo. A second concurrent project will evaluate border documents/forms and identify requirements to align them with documents such as the EU single administrative document. CAREC is also planning a broad based ICT review, part of which will be an examination of the feasibility of upgrading current systems to support a single window and an evaluation of declaration forms to introduce a single administrative document. UNESCAP is also starting a project to assist landlocked countries to work towards a single window based on electronic documentation. In this project, a United Nations Network of Experts for Paperless Trade (UN NExT) in Asia and the Pacific will be established to build up a regional pool of technical expertise that can support the

There has been significant funding agency activity addressed at improving the operations of customs departments. Central data banks and information systems have been prominent.

ADB and TRACECA have supported regional initiatives to map out capacity development requirements for customs departments. This work does not seem to have been taken up at the country level.

Single windows, one-stop shops and single administrative documents have received significant attention. In CARs, the work is in large part led by GTZ with the support of USAID and ADB. CAREC and UNESCAP are planning a number of initiatives.

implementation of paperless trade and a single window in the region⁴. Good coordination will be important to integrate this work with the activities already being conducted by GTZ and USAID.

69. Risk management and post-clearance audits are also CAREC priority areas. CAREC has addressed various aspects of risk management on a regional basis in three projects. One produced a WCO Risk Management Guide to serve as a common framework within which each participating country can develop its own risk management system. A second assisted with the adoption of risk management based customs control procedures and developed a regional framework for a risk management system. The third project seeks to address issues of common concern in risk management and post clearance audits. These projects might merit being followed up as almost all the attention in risk management and post-clearance audit has been directed at three CARs.

4. Metrology, Standards and Product Certification

70. A number of projects have been active in metrology, standards and product certification, largely in Azerbaijan, Kazakhstan, Kyrgyzstan and Tajikistan. There appear to be numerous opportunities to improve the standards of certification bodies, not least of which being to improve governance in this area which so far does not appear to have been addressed. CAREC is planning what appear to be two quite similar projects which should be an important first step in bringing standards to international best practice. One will prepare a 'gap analysis' of the legal framework and technical and operational capability of certification bodies leading to investment proposals for establishment of development certification laboratories. The second proposes an assessment of the product certification capability of each country, followed by appropriate assistance to address those gaps.

5. Multimodal and Intermodal Facilities, and Logistics Centers

71. With multimodal and intermodal facilities and logistics centers, opportunities extend to obtaining finance for developments from the private sector arms of IFIs. CAREC is planning a study to produce an action plan for multimodal transport, but not until 2013. Recently, it has completed trade logistics' studies and prepared strategy reports focusing on addressing trade facilitation and logistics' development constraints. The Trans-Asian Railway Network⁵ has identified approximately 25 locations as potential intermodal points. There might be value in CAREC's proposed action plan and strategies considering these locations for prioritization.

72. With logistics centers, TRACECA is currently conducting a study to produce a logistic centers' network. This could serve as a prototype for CAREC to adopt and extend to its non-

Risk management and post clearance audits have also received significant attention. Much of this work has been in CARs; it could now be extended to other CAREC participating countries.

There has been work in *metrology, standards and product certification*, mainly in Azerbaijan, Kazakhstan, Kyrgyzstan and Tajikistan. There appear to be numerous opportunities to build on this work.

The development of *multimodal and intermodal facilities and logistics centres* is beginning to receive attention. Logistics centres are of particular interest. Both TRACECA and CAREC are conducting studies to develop networks.

⁴ UNESCAP: Single Window, 2009

⁵ Azerbaijan, Kazakhstan, Tajikistan and Uzbekistan are signatories of the Agreement

TRACECA members. CAREC has a study in the pipeline to assess market demand as a basis for establishing short, medium, and long term needs for logistics facilities and equipment which could also build on TRACECA's work.

6. Transit

73. Development of the regional transit system is a CAREC priority area. TRACECA has conducted important preparatory work in transit which might be built on by CAREC. It has catalogued present bilateral and multilateral transport transit agreements applicable to TRACECA members, analyzed their impact and recommended appropriate action to adapt or modify them where they are in conflict with TRACECA agreements. It also has produced a guide to international conventions and agreements and proposed a draft multimodal transit law and technical standards for road freight vehicle construction-and-use. CAREC has piloted a "safe packet" system between Kyrgyzstan and Kazakhstan and has plans to roll out the system to other countries if it proves effective.

74. Guarantee systems have an important role in transit. CAREC has plans to review transit systems and, in particular, to examine the feasibility of implementing alternative customs guarantee systems. Another CAREC study sets out to propose measures to manage coordination in transit countries and will examine the feasibility of implementing a pilot transit system along a corridor based on a one-time customs guarantee. Transit appears well catered for in the short term.

7. Information

75. Availability of up-to-date trade information is an important attribute of an efficient trade and transit system. Information is also important about the conditions of corridors and tariff and other schedules of freight distribution systems. CAREC is planning support to increase the flow of trade information to assist exporters, importers and the logistics industry in three projects by:

- (i) surveying all measures affecting trade and transport and publishing them on the CAREC website;
- (ii) compiling, documenting, and publishing, all import/export trade procedures, rules and regulations and requirements of customs and other government agencies and all other national measures affecting trade like bans, prohibitions, quotas, licensing, technical standards, taxes and fees, finance measures and foreign exchange regulations;
- (iii) documenting all taxes, charges, fees and payments affecting transporters in each CAREC country and categorizing them by type or purpose.

76. A number of funding agencies have established web sites. UNDP is currently assembling all international trade forms and documents used in Kyrgyzstan together with information on the

In *transit*, TRACECA is also prominent, producing a basic study of bilateral and multilateral transit agreements and a guide to international conventions and agreements. Other funding agencies also have significant programs.

Transit appears well catered for in the short term.

Public *information* has been addressed. CAREC is planning support to increase the flow of trade information to assist exporters, importers and the logistics industry. A number of funding agencies have established web sites showing trade documents required for processing freight and other relevant information. It will be particularly important to ensure that all the sites publishing information present consistent and up-to-date detail.

documentary procedures and the legislative acts governing the documents to develop them into an electronic format. They will be entered into a forms repository as a pilot project that, if successful, may be implemented in other CARs. UNDP also plans to develop a regional web facility for gathering document forms and for information exchange on documentary procedures in SPECA countries. GTZ has recently established a web site to make very similar information available. Consideration, however, might be given to a dedicated site concentrating on trade matters of interest to transport companies, importers and exporters, logistics companies and other interested parties. It will be particularly important to ensure that all the sites publishing information present consistent detail on each site.

77. Funding agencies have collected information about the performance of corridors in the general context of the time taken and additional costs to complete a journey. GTZ tracked the experience of freight on a small number of journeys. USAID in conjunction with the World Bank is more systematically tracking freight movements along road corridors through CARs and Afghanistan to Pakistani ports. CAREC has recently established a corridor performance measurement monitoring system to generate baseline information on the movement of goods and people along six corridors, using freight forwarders and road carrier associations to collect the information.

8. Capacity development

78. Training in trade facilitation, as in transport, has witnessed two approaches. Funding agencies like BOMCA have approached it through developing national training institutes. Other funding agencies have delivered it through projects providing training directly to targeted groups. Some funding agencies have sought to strengthen specialized training establishments in a particular country as well as, in other projects, having training establishments deliver training. There has also been training provided on a regional basis addressing particular matters like risk management. Some training has been directed at the private sector like training freight forwarders in Kazakhstan and business councils regionally. There has been little training directed at management other than in one TRACECA project. Participation in study tours seems to be the preferred approach for management. There have been initiatives to twin parts of Kazakhstan and Mongolian customs departments with counterparts in Spain and the Netherlands respectively, but neither has been progressed to any depth. Training has been delivered by a host of different funding agencies. There are significant risks of overlap with the same subject matter often being addressed by a number of funding agencies. For participating countries, this was most in evidence with workshops.

79. CD has addressed a broad range of issues, particularly central computer systems, process re-engineering and improving base level skills of customs officers. There have been a number of loan projects directed at CD in customs departments, all of which having a major emphasis on installing a central ICT system to support management, provide a data base, facilitate transactions and provide management information. CAREC is planning a major regional ICT review with a

The performance of corridors is also receiving attention. CAREC's corridor performance measurement monitoring system and USAID/World Bank's tracking of freight movements to the ports of Pakistan intend to provide important information about costs of moving freight and identify costs of inefficiencies along routes.

Training has received extensive support from funding agencies. Management training, however, has not attracted a great deal of attention. In training, there are significant risks of overlap with the same subject matter often being addressed by a number of donors.

Capacity development has also had a particular focus on central computer systems, process re-engineering and improving base level skills of customs officers. There remains an issue of computer systems being compatible. CAREC's planned regional ICT review might warrant priority to provide a set of building blocks to ensure systems are able to communicate with each other across the region.

diagnostic of ICT strategies and a technical evaluation of software, hardware and communications compared with world standard customs clearance and MIS systems. This study appears to warrant a high priority to provide a basis for harmonization of systems and ensuring that architecture is compatible.

80. In the private sector, USAID has been particularly active in supporting the establishment of a sustainable network of business associations with the financial and technical capacity to continue to improve the business environment for their members. It has also brought together business representatives and members of the Office of the Prosecutor General to identify and discuss illegal and improper agency actions and set up consultative councils to bring business and customs officers together.

C. Funding Agency Foci

81. Trade facilitation has engaged a number of funding agencies. The mix is quite different from those engaged in transport, though ADB and the World Bank remain principal players. In trade facilitation, bilateral funding agencies play a prominent part, though confined to a restricted group of CAREC countries (principally the CARs). In contrast to transport which is focused on infrastructure, most work focuses on soft issues like legislative change, organizational change and process re-engineering which, on development issues, have proved challenging. There are, however, a number of international conventions which influence this area, especially the WTO, which enables progress on change to be measured against ultimate goals. At a regional level, TRACECA has been especially prominent with its approach to seed ideas and better practices in the expectation that they will take root and lead to improved practices.

82. Tables 3 and 4 (at the back of this report) summarize the major foci of the work of major funding agencies in trade facilitation by country.

D. Potential Overlaps

83. Trade facilitation has been of interest to a large number of funding agencies. There is acknowledgement that in some areas coordination has not been exemplary. Counterpart organizations have not always taken the lead in coordination in their own areas of activity.

84. The situation of more than one funding agency working in a particular area does not necessarily lead to overlap. It can also produce synergies, as seems to have happened in Kyrgyzstan with the work of GTZ, USAID and ADB on single windows and single administrative documents.

In the private sector, USAID has been particularly active in supporting the establishment of a sustainable network of business associations. Building on this work and extending it to other trade associations might be an area of opportunity for CAREC.

Tables 3 and 4 (at the back of this report) summarize the major foci of the work of major funding agencies in trade facilitation by country and the funding agencies working in individual countries on given issues.

In some areas of trade facilitation, coordination has not been exemplary.

Overlaps do occur, indicating that there are opportunities for efficiency improvements.

85. There have been overlaps. Their existence, however minor, indicates that there are opportunities to improve management of development initiatives to produce greater efficiencies. Overlaps which might have led to inefficiencies include:

- (i) With customs codes, an occasional duplication of the work being done by bilateral funding agencies and those addressing the issue at a regional level;
- (ii) A number of funding agencies running intensive courses and workshops on the Agreement on Trade Related Aspects of Intellectual Property Rights (TRIPS);
- (iii) Development of some BCP infrastructure. For example, BCPs at Hairatan, Torkham and Shirkhan Bandar in Afghanistan received attention from more than one funding agency;
- (iv) Different funding agencies separately working on the same issue as happened in Kazakhstan with the production of training needs analyses and HRM and HRD strategies for customs;
- (v) Numerous agencies working on a single window. There might be merit in having a situational analysis of this work so that funding agencies, agencies and countries can work within an overall framework to lead to harmonized systems across the region and funding agencies with comparative advantages in certain areas being preferred to do this work;
- (vi) A number of agencies, some of which are working reasonably independently, addressing border management principally from the perspective of border guards or customs;
- (vii) The provision of information through websites, especially about requirements to process freight. With many current activities being directed at re-engineering the design of documentation, proposed changes need to be publicized as quickly as possible so that business associations have an opportunity to become engaged in the process. When the changes have been announced, equally, the information needs to be come available so that enterprises and the general public can adjust their processes.

86. Though not overlaps, there have also been inconsistencies which can lead to inefficiencies.

- (i) There has been considerable assistance with the provision of ICT and communications equipment. There are distinct possibilities that some equipment is difficult to integrate with other ICT and communications systems in a user agency or generally used by government. One matter which did not come up in any project designs was the

Overlaps and inconsistencies might include:

- (i) Regional initiatives, particularly in policy development and legislative change, overlapping with work at the country level;**
- (ii) Multiple funding agencies working on the same issues, for example HRM strategies in Kazakhstan, border management across the region and workshops addressing the same issues;**
- (iii) The provision of information through websites. Coordination to ensure consistent information is particularly important;**
- (iv) Provision of ICT and communications systems, not all of which are compatible;**
- (v) While some funding agencies have supported enhancing the quality of training establishments, others have delivered training directly through projects. Training delivered by projects need not be consistent with that delivered by a training establishment.**

development of an ICT master plan for a country and at an agency level to ensure compatible architecture, systems and protocols;

- (ii) The delivery of training by funding agencies has a number of cross overs. As mentioned, there have been two broad approaches: to develop in-country institutions to deliver training; and for specific training to be delivered by a project. There is a risk that project delivered training might not take cognizance of training curricula and methodologies of training establishments and deliver partly confusing messages. On-the-job training, other than for border guards, needs to be consistent with the principles enunciated by training institutions and might profit from greater funding agency attention.

E. Gaps

87. Both TRACECA and ADB have funded initiatives at a regional level which have proposed solutions to trade facilitation issues. How far the solutions proposed are disseminated and adopted is not clear. It might be of interest to support a study of the impact of such recommendations and proposals in individual countries. Those that have been adopted by a majority of countries might be attractive as templates or standards for other countries to move towards. There remains a tension in the region between consistent development based on regional initiatives and countries independently developing their own solutions to common issues.

88. The trade facilitation appendix details work in one country which is not replicated in all countries. It suggests progress on any one issue is not even across the CAREC region. This seems particularly prevalent in ICT and CD.

F. Opportunities

89. One objective in developing competitive transport corridors is to ensure that there is even development along each corridor. Funding agency interventions are not necessarily distributed evenly across all countries. While some countries have the economies which enable them to fund the necessary developments themselves, the majority do not. Consequently, **there might be merit in:**

- (i) **producing a situational analysis to determine areas where additional attention might be focused and subsequently tracking progress on those issues;**
- (ii) **providing an appropriate mechanism to track progress on prioritized issues.** Additionally, funding agencies might consider building on the broad initiatives started by TRACECA, particularly in its work on policy harmonization. Where CAREC has an

Both TRACECA and ADB have funded significant initiatives at a regional level. How far the solutions proposed have been disseminated and adopted is not clear. There remains a tension between development based on regional initiatives and countries independently developing their own solutions to common issues.

Progress on a number of issues has not been even across the region. This seems particularly prevalent in ICT and capacity development. *There might be a case for a situational analysis to determine the extent of any.*

There is also a case for providing a mechanism to monitor progress of each country on prioritized issues. Additionally, there might be value in building on the broad initiatives started by TRACECA in policy development work.

advantage with its membership is in being able to follow regional work conducted by a funding agency with country specific support for implementation.

90. A number of opportunities have already been touched on in this chapter. They include:

- (i) **Plan for regional level work to lead into supporting implementation activities at a country level.** There have been many studies, especially regional, which have led to bodies of recommendations about trade facilitation issues. The impact of much of the information and recommendations is difficult to access. Making this work available might prove useful so that the work can be built on where findings are relevant;
- (ii) **Examine the effectiveness of training with a view to systematizing its provision.** There do not appear to have been any tracer studies of the impacts of training, workshops and study tours on participants. Systematization might build on the work already done by TRACECA in this field and encourage communities of interest among training establishments. Management training, in particular, might be given prominence. CAREC's proposed Regional Customs Training and Development Project might provide a mechanism to address this issue. There might be a case for advancing its proposed implementation date;
- (iii) **Build on USAID's assistance to business and other private sector associations.** In particular, attention might be given to providing effective mechanisms for associations to meet on an equal footing with government agencies over trade facilitation issues;
- (iv) **Build on SPECA's and TRACECA's proposed networks of logistics centers and CAREC's logistics studies for prioritizing logistic centre development;**
- (v) **Conduct a regional review of IBM approaches in participating countries to integrate a comprehensive approach which targets all agencies engaged in trade facilitation.** Particular attention might be given to establishing communities of interest among participating agencies.

Important additional opportunities for consideration include:

- (i) *Planning for regional level work to be followed by work at a country level;*
- (ii) *Examining the effectiveness of training with a view to systematizing its provision;*
- (iii) *Building on USAID's assistance to business and other private sector associations throughout the region;*
- (iv) *Building on SPECA's and TRACECA's proposed networks of logistics centres for prioritizing logistic centre development;*
- (v) *Conducting a regional review of IBM approaches in participating countries to integrate a comprehensive approach which targets all agencies engaged in trade facilitation.*

¹ The report examines assistance since 2000.

A. Background

1. The CAREC region, with the exception of Afghanistan and PRC, has inherited the road system of the FSU. The system was designed without reference to future borders between nations that were not conceived of at the time. Regional road routes, as a consequence, tend to head in a north and north-westerly direction to Russia. Some criss-cross borders. A number of major cities are very close to a border. For example, the original road from Tashkent to Samarkand crossed into Kazakhstan not far from Tashkent and the direct road from Osh to Jalabad ran largely through Uzbekistan. Consequently, a number of alternative routes along secondary roads have been developed, leaving the part of the road passing through the neighbouring country carrying less traffic than it was designed for.

2. Since the break up of the FSU, as with other transport systems, funds for road maintenance have proved inadequate with a result that much road infrastructure has deteriorated. Traffic remained light for a number of years as economies struggled to make the necessary adjustments from command economies to market ones, which meant that there was less pressure on the need for maintenance. The same circumstances applied to road maintenance equipment, almost all of which had been inherited from FSU and much of it was already old. For example, the ADB found that Mongolia, in 2000, had a large fleet of road construction and maintenance equipment, much of which was inoperable due to age and lack of spare parts (ADB-5)². Road management also experiences other constraints including legislative and regulatory frameworks which require updating, a reluctance on the part of government to open up operations and development to the private sector, some weak operational management practices – especially regarding maintenance and supervision of axle loads, overmanning, and operating policies and systems which would benefit from revision.

3. Four organisations have developed road corridors through the region. They are CAREC, UNESCAP (United Nations Economic and Social Commission for Asia and the Pacific), TRACECA (Transport Corridors Europe, Caucasus and Central Asia) and EurAsEc (Eurasian Economic Community). All differ in membership:

- (i) ESCAP's Asian Highway route map is more a network than a set of corridors. It differs from the other three sets of corridors in that it provides linkages between major arteries. The 25 numbered arteries passing through the CAREC region largely correspond with those of the other three organizations. All CAREC countries are members of UNESCAP³;
- (ii) TRACECA includes the Baltic states (other than Russia), Azerbaijan and the Central Asian Republics. Its primary focus is on developing transport corridors from Europe east to Afghanistan and PRC which do not pass through Russia. It has 14 priority road routes in the region;
- (iii) EurAsEc (Eurasian Economic Community) consists of Belarus, Kazakhstan, Kyrgyzstan, Russia, Tajikistan and Uzbekistan. EurAsEc has an objective to develop a unified transport system. Priorities include the issue of unified tariffs, increasing the flow of goods, simplifying customs procedures, completing intra-state procedures on signed agreements, and establishing transnational freight forwarding corporations. EurAsEc tends to work at the planning level and then persuading its membership to implement the plans through self-financed investment. Four of its road corridors are on a north-south axis from Russia south

² L 1700MON: Second Roads Development, 2000, p. 18

³ ESCAP, **Toward an Asian Integrated Transport Network**, New York 2007, p. 137

while the fifth travels across the CARs in a south-easterly direction from Volgograd.

4. The core of the four sets of corridors overlaps. There are, however, a number of roads in the ESCAP, TRACECA and EurAsEc systems which are different from CAREC's road corridors. For development financing, the overlapping core area would benefit from coordination between the four organizations for prioritizing development financing.

5. The road routes which are not part of CAREC's network are (many of which have border crossings not in CAREC's network):

- (i) EurAsEc route 1 enters Kazakhstan on CAREC route 6a and heads along various CAREC routes through Uzbekistan to Almaty and then to Taldi Korgan where it deviates from CAREC corridor 3, passing through Usharau, Taskaskan, Ayagus, Djorgiska, Ust Kamenogorsk and thence back into Russia. ESCAP has a similar route along its highway AH60 to Djorziska and Semipalatinsk and continues in Kazakhstan through Pavlodar and Paityshskoe;
- (ii) EurAsEc corridor 2 enters Kazakhstan separately from Kurgan in Russia, passing through Petropavlosk to join CAREC routes 1a and 1c somewhere south of Kokchetav. It then follows CAREC routes to Torugart and PRC. ESCAP highway AH64 also passes through Petropavlosk and Kokchetav;
- (iii) EurAsEc corridor 3 enters Kazakhstan from Samara passing through Uralsk before joining CAREC route 1b north of Aktobe and follows various CAREC routes to Yierkeshitan and PRC. ESCAP highway AH61 passes through Kamenka and AH63 through Pogadaevo to Uralsk;
- (iv) EurAsEc corridor 4a, enters Kazakhstan from Omsk in Russia passing through Pavlodar, Semipalatinsk, Maikapchagay and thence into PRC without joining or crossing any CAREC corridor.
- (v) TRACECA route 21 follows CAREC route 2b from Turkmenbashi to Bokhara but has a spur from Mary proceeding south into Afghanistan between Serkhetabad and Torgundi as does ESCAP's highway AH77;
- (vi) TRACECA route 23 is from Samarkand to Dushanbe in Tajikistan along a different route from the CAREC route which would require passing through Djizzak. From Dushanbe, it shares CAREC route 6c as far as Kurgan Tube before heading north east to Kulab;
- (vii) TRACECA route 25 has a spur leaving CAREC route 2a at Uzgen and travelling across country to Kazarman before joining CAREC route 1c to Torugart and PRC;
- (viii) TRACECA route 27 follows CAREC networks from Beyneu in Kazakhstan to Samarkand in Uzbekistan. It, however deviates at Nukus on a separate route through Uchkuduk before rejoining CAREC route 2a at Navoi;
- (ix) TRACECA route 32 follows the CAREC network from Aktau to Makat where it leaves the CAREC corridors. It crosses from Makat to Aktyubinsk, through Subarkuduk and Kandargash, where it joins CAREC route 1b to the PRC border at Korgas. It has a spur which passes separately from Saryozek to Dostyk (Druzhba) on the PRC border;
- (x) TRACECA route 34 is a largely distinctive route from Dushanbe to the PRC border, leaving the CAREC network at Kulab, and follows the border between

Tajikistan and Afghanistan through Kalaykhum and Khorog before heading north to Murgab and then crossing from Tajikistan into PRC due east of Rangkul as does ESCAP's highway AH66;

- (xi) ESCAP's Asian Highway is much more extensive than those of the other three organizations. The unique sections are illustrated in map 1.

B. Policy

6. There has been significant attention paid to policy development. TRACECA has approached road policy development very systematically. It has set out to harmonize policy agendas by establishing principles for national transport policies coordinated at the regional level and for legislative frameworking reflecting international and European Union standards accompanied by a short, medium and long term action program for legislative action (TRAC-4)⁴. Information would be helpful about the extent to which TRACECA's proposals have been accepted by its CAREC membership and acted on. If they have, the work might provide a useful framework to propose their extension to CAREC's non-TRACECA membership.

7. Two ADB projects addressed policy early this decade. In Kyrgyzstan (ADB-7) and Mongolia (ADB-13), projects set out to develop a new policy agenda to provide the basis for enhancing the efficiency and effectiveness of the sector. The two studies were not linked. The ADB also has prepared a concept paper in its Azerbaijan CPS to address road sector policy issues involving rationalizing road user charges for maintenance funding, ensuring effective maintenance, controlling vehicle overloading, minimizing environment and social impacts, and enhancing road safety (ADB-100)⁵. EBRD also has a transport policy review in Azerbaijan on its agenda with a project to develop and implement a national sustainable transport policy, with a focus, where appropriate on further approximation of legislative and regulatory frameworks with European and international standards, in particular for safety and security (all transport modes) (EBRD-21)⁶.

C. Planning

8. There has been a number of transport plans prepared for individual countries in the CAREC region. UNESCAP has set out to develop an agreed Asian Highway in its Asian Land Transport Infrastructure Development (ALTID) project. In the period of this work, it conducted a study of the road network connecting PRC, Kazakhstan, Mongolia, Russian Federation and Korean peninsula to identify priority road networks to connect these countries efficiently (ESCAP-12)⁷. There is no published overall road development plan for the region and none specifically planned by CAREC, though one might emerge from ADB's Transport Sector Study. The study has a requirement for the formulation of a transport sector strategy and a time bound implementation plan designating what resources are required (ADB-50)⁸. Early in the period of this study, ADB provided assistance to prepare road maps in each priority sector based on regional sector studies (ADB-148)⁹. CAREC did commission a reassessment of its regional

⁹ TA 6053REG: Silk Road Initiative, 2002

transport strategy which proposed a draft strategy¹⁰ and an investment plan. The study identified a number of investments for the road sector, most of which have entered into CAREC's overall program. The guiding document for roads is the transport master plan which was endorsed by CAREC in 2005. For the road sub-sector, two strategic priorities are relevant:

- (i) development and improvement of regional and international transport corridors to link production centers and markets within the CAREC member countries, and to enhance CAREC member countries' access to neighboring regions and markets;
- (ii) improvement of sector funding and management to ensure that the regional transport network is developed, and maintained properly¹¹.

9. A number of plans specifically address road transport within a country. They are likely to concentrate on what is best for a country rather than what is best for a region. For most countries, plans are prepared by international consultants. This suggests that attention might be given to enhancing the transport planning capacities of each country. It is important that plans are updated regularly if they are to remain the basis for executive action and that is best done by departmental personnel:

- (i) In Afghanistan, the World Bank conducted a Transport Sector Review in 2003 to develop an institutional and policy framework for the sector but that did not include investment plans for the road system¹². It did, however, result in a transport policy statement by the government which had a strong emphasis on corporatizing the whole sector. The policy had regional roads being "managed by an autonomous road agency, and its preservation and further development financed by road user charges, which are not part of the consolidated budget"¹³. At much the same time, the World Bank also helped prepare an overall vision and strategic plan for the transport sector, consistent with the policy statement (WB-4)¹⁴. The ADB also prepared a master plan for road network improvement at the same time which included a 5-10 year road rehabilitation investment program. It also prepared long-term strategies to introduce a financing mechanism for operations and maintenance (ADB-22)¹⁵. In 2006, Afghanistan released its own road sector master plan. According to the US Government Accountability Office, there were significant gaps in the necessary data to prepare such a plan. For CAREC, there might be value in assisting the Afghanistan Government to build up that data to improve road planning¹⁶;
- (ii) In Azerbaijan, the ADB set out to produce a medium-term (2006–2016) transport sector development strategy, covering the roles of Government, private sector, and regulatory bodies. It included an identification and prioritization of long-term needs for transport infrastructure and proposals for policy, institutional and regulatory reforms (ADB-29)¹⁷;

¹⁷ TA4582AZE: Transport Sector Development Strategy, 2005

- (iii) There have been no transport master plans prepared by donors for Kazakhstan which comprises the major land mass of Central Asia. All CAREC corridors other than one through Turkmenistan pass through Kazakhstan. The World Bank is discussing a project which, among a number of things, would assist the government prepare a prioritized road rehabilitation program (WB-13)¹⁸. Kazakhstan had already developed a transport sector strategy itself to improve and expand its network over the short to medium term. This plan provides a basis for planning investment programs, but, given the length of the road network, seems to apply the available budget fairly evenly across the whole system. EBRD has also provided assistance with road sector planning and management (EBRD-2)¹⁹;
 - (iv) In Kyrgyzstan, the ADB has recently embarked on the preparation of a transport master plan for the period 2010-2025. It will develop long-term investment programs for the road sector (ADB-76)²⁰. ADB's CPS is proposing the development of a transport and communications strategy to start in 2009²¹;
 - (v) In Mongolia, ADB has prepared a transport strategy for the period 2005-2015 based on a review of sub-sector master plans (ADB-32)²². At much the same time ADB also prepared a sub-regional study, confined to Mongolia and PRC, which set out to identify a road map to improve integration of the transport network in various economic corridors and find alternative routes to the sea for landlocked regions in Mongolia and the PRC (ADB-47)²³. The World Bank prepared a road master plan between 2001 and 2005 (WB-3)²⁴;
 - (vi) In Tajikistan, the ADB is currently preparing a transport master plan. It will identify priority directions for each subsector to improve policy and regulations, increase outputs and efficiency, and prepare an investment program (ADB-49)²⁵;
 - (vii) In Uzbekistan, the ADB has prepared a transport sector plan broken down to short-term (2006–2010), medium-term (2011–2015), and long-term (2016–2020) plans and a sector road map for transport sector development (ADB-46)²⁶.
10. There is considerable variation in the planning treatment of roads among CAREC participating countries. This leads to a number of observations:
- (i) Most countries in the region have their own transport master plans, some of which have been based on planning interventions provided by donors. For regional planning, it might be helpful to reconcile these plans with CAREC's own regional plans for monitoring infrastructure investment priorities;
 - (ii) On a regional basis, there might be value in preparing a road/railways master plan. Neither road nor rail system operates independently from the other particularly where rail freight is transferred to road. A joint plan would be able to plan for the location of multimodal centres. UNESCAP has done work in this

²⁵ TA4926TAJ: Transport Sector Master Plan, 2006

²⁶ TA4659UZB: Transport Sector Strategy 2006-2020, 2006

area. The plan could also consider the issue of competition between the two modes of transport, especially for freight and, in the case of CARs with their investments in primary industry, bulk freight. UNESCAP has done some work in this area, with a small transport pricing study to provide users with a set of prices which reflect the resource cost of providing facilities and services of different alternative modes of transport (ESCAP-24)²⁷. Such a master plan might also benefit from considering bringing each participating country to international best practice, possibly in line with the work done by TRACECA concerning policy frameworks, enabling environments, road pricing, road safety standards and other standards.

- (iii) For roads, with the very high investment costs, there is likely to be an uneasy relationship between country and sub-regional planning. One country, for example, which had reached its borrowing limits as a result of other priority areas, might cause very costly delays to regional systems development if there were serious limitations on its borrowing because of priorities other than road. Afghanistan is a good example of a major road building program at the regional and national levels which has attempted to address years of underinvestment and the ravages of war as well as positioning itself effectively within each of the proposed regional road systems. With donor assistance, it has rehabilitated all but a small length of its regional road system, part of which corresponds to CAREC's two corridors passing through the country. No other CAREC country has a complete regional road system to a similar standard.

D. Road Development

11. There has been significant activity in regional road development and rehabilitation in participating countries, especially Afghanistan. The Afghan road system is divided into regional, national, provincial and rural roads. The 3,240 km of regional highways predominantly comprise a circular road linking Kabul, Kandahar, Herat and Mazar-e-Sharif with 8 links exiting the circle to neighbouring countries. Two are into Iran from Herat and Detaram, two into Pakistan from Kabul and Kandahar, two into Turkmenistan from Herat and Andkhoy, one into Uzbekistan from Mazar-e-Sharif and one into Tajikistan from Kokan. Donor funds have been committed to reconstruct the whole of this length. By February 2008, approximately 1,955 km. had been completed²⁸. USAID and ADB were the main contributors²⁹.

12. Investments in road improvements have been spread across all CAREC corridors. Investments, including ADB, have also been directed at roads outside CAREC corridors, though not outside the corridors of ESCAP, TRACECA and EurAsEc:

- (i) Corridor 1 has three routes: from Troisk through Kazakhstan to the Chinese border at Dostik; from Orenburg through Kazakhstan to the Chinese border at Khorgos; and from Troisk through Kazakhstan and Kyrgystan to the Chinese border at Torugart:

²⁷ NET99728: Transport Pricing and Charges for Promoting Sustainable Development, 2001

²⁸ Government Accountability Office, **AFGHANISTAN RECONSTRUCTION - Progress Made in Constructing Roads, but Assessments for Determining Impact and a Sustainable Maintenance Program Are Needed**, July 2008

²⁹ US Department of Defense committed Commander's Emergency Response Program (CERP) funds for civilian road projects, and Military Construction and Military Engineering funds for roads for military purposes. It is assumed that the latter did not include any regional highways.

- a. Route 1a does not appear to have received a great deal of donor finance. It is possible that some gaps have been filled by construction programs financed by the governments themselves. The section from Troitsk to Astana has not received finance. 183 km. between Vishnevka - Astana of the Astana-Karaganda section was funded by IDB (IDB-6). The Saudi Fund financed the 42.9 km. Osakarovka-Vishnevka section and the Government of Kazakhstan covered the cost of the reconstruction of the 85.6 km. Karaganda-Osakarovka section³⁰. A further 215 km. section south, Karaganda-Akshatau, was supported by the World Bank (WB-1)³¹. The Astana-Karaganda section is also in CAREC's forward plans for rehabilitation between 2009 and 2012 (ADB-81)³² which might overlap with the recent work of IDB. The long section Akshatau-Dostik has not received funding. In PRC, a 106 km. section Ala Shankou-Jinghe is in CAREC's forward plans (ADB-69)³³;
- b. Route 1b has had more attention. The 102 km. section Kos Aral-Aktobe is currently being upgraded with EBRD and Japan-Europe Cooperation funds (EBRD-8)³⁴. The 834 km section Aktobe-Turkestan is about to be addressed by the World Bank (WB-9)³⁵. Up to 2008 the long section Aktobe-Taraz received attention predominantly from the Kazakhstan Government. The need for a World Bank project indicates that additional funding was required. The Kazakhstan government committed \$68.6 million to the section Irghiz-Karabutak, \$193.8 million to reconstruct the section Kyzyl-Orda-Shymkent and \$162.5 million to the Shymkent-Taraz-Almaty-Khorgos section. Information about which parts of these sections were addressed in full would be helpful³⁶. The ADB, IDB and JBIC have provided funds for a 125 km. section Taraz-Korday (ADB-75, IDB-5)³⁷ and JICA is planning further work in Zhambyl oblast (JICA-21)³⁸. CAREC has forward plans for a 2,815 km. length of the route through Kazakhstan to be completed in a 3 year period (ADB-82), and separately and specifically for a 104 km. section Almaty-Kapchagai (ADB-87), and a section Lianyungang-Khorgas in PRC to be funded by the government (ADB-38)³⁹;
- c. Route 1c replicates route 1a to Mointy with only the Astana-Akshatau section having been funded. The World Bank rehabilitated a 255 km. set of Almaty-Gulshad sections (sections 1-5 and 17-21) (WB-1)⁴⁰. ADB has plans to rehabilitate the Bishkek-Torugart section of the route (ADB-85)⁴¹ and has so far funded 39 km. of the route (ADB-76)⁴². On the PRC side of the border, CAREC

⁴⁰ KZ-PE-8499: Road Transport Restructuring Project, 1999-2004

⁴¹ KGZ IP1: Bishkek-Torugart Road Rehabilitation, 2009-2014

⁴² G0123KGZ: CAREC Transport Corridor 1 (Bishkek-Torugart Road) Project, 2008-2014

has plans for the 110 km. Torugart-Wuqia County section (ADB-72)⁴³ and is upgrading the 296.5-km Korla–Kuqa section (ADB-55)⁴⁴. The latter project did not include construction of the Torugart-Wuqia section which had been included in CAREC forward plans. The sections Wuqia County-Kuqa and Kuqa-Korla-Turpan have not been funded though they might have been part of internal PRC road improvement programs;

- (ii) Corridor 2 has one route from Europe through Azerbaijan and across CARs to PRC through Kyrgyzstan. It has two alternative sections, one in Azerbaijan with a route from Yevlakh, through Alyat to Baku instead of the direct route between Yevlakh and Baku. In Uzbekistan, there is a bypass of Tashkent which follows the section Djizzak-Bekabad-Nau-Kokland. At Baku, the corridor bifurcates with one route from Turkmenbashi in Turkmenistan to Bukhara in Uzbekistan, where it merges with the northern route. The northern route proceeds from Aktau in Kazakhstan to Bukhara. Turkmenistan is not a participating country in CAREC. As a consequence, the former route is not in the CAREC program.

The east-west road from the Georgian border to Baku has received assistance for much of its western sector. The ADB completed the 38 km section from the Georgian border to Gazakh (ADB-37)⁴⁵; the World Bank, assisted by EC-TACIS, the 94 km. section Gazakh-Ganja (WB-2)⁴⁶; ADB, IDB and Saudi Arabia shared financing of the 89 km section from Ganja-Yevlakh (ADB-37, IDB-28)⁴⁷; IDB the Yevlakh-Ujar (IDB-13)⁴⁸; and EBRD, the 85 km section Kyurdamir-Hajigabal (EBRD-9)⁴⁹. The section, Hajigabal-Alyat-Baku does not appear to have received donor financing. CAREC's northerly but parallel section Yevlakh-Baku also does not appear to have received donor attention. CAREC has programmed work on a further 534 km of the East-West Highway in the period 2007-2015 (ADB-56)⁵⁰.

Heading east from the port of Aktau, CAREC has programmed work on the Aktau-Beyneu section in the period 2009-2012 (ADB-83)⁵¹. There has been an EBRD project, started in 2003, which rehabilitated 900 km of the section Atyrau-Aktau (EBRD-2)⁵². From Beyneu to the Uzbekistan border, the Kazakhstan government has a \$26.9 million rehabilitation project expected to be completed in 2007⁵³. From the Uzbekistan border east, ADB has a current project to rehabilitate a short 138 km in sections between Dautata, Nukus, Bukhara and Gubar (ADB-53)⁵⁴. To give an idea of the lengths involved, CAREC is planning improvements to 40 km between Km 876-916 in Karakalpakstan and 91 km between Km 490-581 in Korezm⁵⁵, leaving long lengths which still might need attention. East of Bukhara, funding has been provided for an ADB feasibility

study of the 150 km section Angren-Gulistan, the part of the corridor which bypasses Tashkent (ADB-33)⁵⁶. IDB has a project to reconstruct 124 km of the 258 km Osh-Irkestan road (IDB-15)⁵⁷ but the Kokland-Andijan section does not appear to have received donor attention;

- (iii) Corridor 3 heads in a south south westerly direction from Veseloyarsk through Kazakhstan and bifurcates at Merke. One route passes through Kyrgyzstan, Tajikistan and Uzbekistan before entering Afghanistan and passing down to Herat and thence into Iran through Islam Qila. The second route is in a parallel direction to the north passing through Shymkent into Uzbekistan and then down to Bukhara and into Turkmenistan. From there it passes through Mary and enters Iran through Sarakhs. The central part of this route from Almaty to Shymkent has already been covered in route 1b and Tashkent to Bukhara in route 2.

The major length in Kazakhstan from Veseloyarsk to Almaty does not appear to have received donor funding. JICA has built a bridge over the Irtysh river (JICA-18)⁵⁸. The length has received funding of \$363.2 million from the Kazakhstan Government in a program to 2008. Instead of following Corridor 3 through Aul and Veseloyarsk, the road funded proceeded further east through Kamenogorsk and Ust. The Merke-Chaldovar-Kara Balta section does not appear to have received donor funding. The section Kara Balta-Osh is part of the Bishkek-Osh road which has been rehabilitated with ADB, IDB and JBIC funds (ADB-7, IDB-3)⁵⁹. The section Osh-Sopu Korgon has been financed by ADB (ADB-34)⁶⁰ but the section on to Sary Tash does not appear to have received donor funds. TRACECA has done a feasibility study of the 136 km section Sary Tash-Karamik on the Tajikistan border (TRAC-3) which CAREC has in its forward planning for 2009-2012 (ADB-84)⁶¹. A series of ADB projects takes the road from Karamik to Dushanbe (ADB-73, ADB-51, ADB-25)⁶² followed by technical assistance to design a project to continue the road to the Uzbekistan border (ADB-66)⁶³. There does not appear to have been donor assistance for the section from Saryasia, on the Uzbekistan border to Termez on the Afghanistan border.

Once into Afghanistan, ADB projects take the route through Mazar-e-Sharif to Andkhoy (ADB-17, ADB-18, ADB-21, ADB-27, ADB-54, ADB-19)⁶⁴. The 55 km section Naibabad-Hairatan was rehabilitated in 2003 and is in CAREC planning for further rehabilitation in 2008 (ADB-63)⁶⁵. The section Andkhoy-Leman does not appear to have received donor funding. IDB has funded the section Aquina-

Andkhoy (IDB-12)⁶⁶. Iran has funded two projects for the sections Islam Qila-Herat and Heart-Armalik (IRAN-1, IRAN-2)⁶⁷.

- (iv) Corridor 4 consists of two parallel north-south roads from Russia to PRC through Mongolia. They are not linked together. The western route is attached to the CAREC network but the eastern route is not as CAREC has not developed a corridor in Inner Mongolia. The western route through Olgiy and Hovd links with Xinjiang province and passes to Urumqi. The more easterly route through Ulaan Baatar exits into Inner Mongolia which is part of CAREC but has not yet been included on a road corridor. There are no roads travelling east-west to link the two routes in the CAREC network (though there is on ESCAP's Asian Highway.

The western route, a 748.4 km road stretching from Ulaanbaishint to Yarang is currently being addressed by ADB in a two stage project (ADB-71)⁶⁸. The eastern route from Altanbulag to Zameen Uud is also being addressed in a sequence of 3 projects, the northern part of which was completed before 2000 (ADB-5)⁶⁹;

- (v) Corridor 5 is from Xinjiang, through Kyrgyzstan, Tajikistan and Afghanistan to the Pakistan border. The PRC section from Hexi to Kashi replicates route 1c and Hexi to Sary Tash replicates route 2b and has been considered under those corridors. The section from Sary Tash to Dushanbe replicates route 3b and has been considered under this corridor.

The 80 km section of road south from Dushanbe-Kurgan Tyube is being addressed by ADB (ADB-8)⁷⁰. CAREC has programmed a 15 km section Dusti-Nizhny Pianj on the Afghanistan border in its forward plans (ADB-70)⁷¹. The US Government provided funds for a bridge across the Syr Darya river into Afghanistan at Nizhny Pianj (USAID-1)⁷². The section Kurgan Tyube-Dusti does not appear to have received donor assistance. Once into Afghanistan, the route from the Tajikistan border to the Pakistan border has been completed. The World Bank funded the section from the Tajikistan border to Kabul (WB-4)⁷³ with assistance from IDB for the 50 km section Doshi-Pol-e-Komri (IDB-11)⁷⁴. The same section has been included in CAREC forward plans for 2009 (ADB-78)⁷⁵. The European Union funded the 142 km section Kabul-Jalabad (EU-1)⁷⁶ and the Pakistan Government funded the section Jalabad-Torkham on the Afghanistan/Pakistan border (PAK-1)⁷⁷;

- (vi) Corridor 6 has two largely parallel roads running north-south from Russia to Afghanistan with the easterly route destined for Pakistan and the westerly one,

Iran. There is a link between the two routes between Khavast and Tashguzar. Route 6a replicates route 2a from Beyneu to Bukhara, then continues from Bukhara to Termez at the Afghanistan border before replicating route 3b through Herat and to the Iran border at Islam Qila. Route 6b is the road which links the two routes. Route 6c replicates route 1b from Novomarkova to Shymkent and route 3a from Shymkent to Tashkent. It then proceeds from Tashkent to Dushanbe before replicating route 5 to Kabul and thence to Torkham on the Pakistan border. Consequently most of these routes have been discussed under the earlier routes. The link between Khavast and Tashguzar replicates routes 2 and 3a travelling between Khavast and Samarkand.

The only section which does not replicate other corridors to have received funds is the section Atyrau-Beyneu which has been rehabilitated by EBRD (EBRD-2)⁷⁸. The remainder does not appear to have received donor funding. They are the sections Aksarayaskaya-Atyrau, Bukhara-Termez, Tashkent-Dushanbe and Samarkand-Tashguzar.

13. Other than corridor 4, no corridor has work planned so that the whole corridor is completely constructed. The two countries which have the longest road sections and significant sections still to be funded are Uzbekistan and the hub of the network in Kazakhstan.

14. There has significant investment activity outside the CAREC corridors:

- (i) The national level road system in Afghanistan has received considerable funding, including from the ADB (ADB-61, ADB-52, ADB-62)⁷⁹;
- (ii) In Azerbaijan, ADB attention has moved to a north-south road corridor which is not part of the CAREC system. It has provided a feasibility study of a road section from Alyat to Astara (which is on ESCAP's Asia Highway AH8) and a program to construct that highway starting with the section Astara-Masalli. Further work is planned in the period to 2014 (ADB-30, ADB-68)⁸⁰. The World Bank has funded a section Zarat-Samur (WB-12)⁸¹. EBRD has funded a 60 km section Sumgait-Zarat (EBRD-10)⁸². Both of these sections are on the Asian Highway AH8 north of Baku;
- (iii) In Kazakhstan, ADB's rehabilitation of the Almaty-Bishkek road is not on a CAREC corridor. JICA has funded a project to rehabilitate the 950-km section of the western Kazakhstan road Astana-Atyrau, which is not on any of the corridors of UNESCAP, TRACECA, EurAsEc and CAREC (JICA-20)⁸³;
- (iv) In Kyrgyzstan, there have been three IDB projects rehabilitating the road Taraz-Talas- Suusamyr (IDB-5, IDB-14, IDB-16)⁸⁴ and a new World Bank project, perhaps supported by EU-TACIS, to improve the Osh-Isfana road (WB-8)⁸⁵;

⁸⁵ P107608: National Road Rehabilitation Osh-Isfana, 2009

- (v) In Mongolia, a World Bank project potentially starts a linkage between the two routes of CAREC corridor 4, reconstructing 177 km of road from Erdenesant to Arvaikheer and upgrading 93 km of the earth road from Arvaikheer to Khovd (the length of the road is 1040km) (WB-3)⁸⁶. This project appears to follow some of the Asian Highway route AH32;
- (vi) In PRC, the World Bank has been active with a sequence of three projects in Xinjiang province and one in Inner Mongolia, the latter addressing sections of the highway network identified as being key links for international trade facilitation at smaller border crossings with Russia and Mongolia and which might warrant inclusion in the CAREC network;
- (vii) In Tajikistan, there has been a lot of activity on TRACECA route 34, particularly IDB which has had 6 projects (IDB-2, IDB-4, IDB-8, IDB-9, IDB-22, IDB-23)⁸⁷. OPEC has also had one (OPEC-1)⁸⁸.

E. Maintenance

15. There has been extensive donor interest in maintenance. Much has been directed at outsourcing it and sequestering funds for it:

- (i) In Afghanistan, five projects have had components addressing maintenance. In line with its policy framework, the World Bank focused on ensuring that funds were raised to fund maintenance, particularly for a tunnel and the sections of the ring road it was financing. It set out to assist Afghanistan move away from its force account approach to maintenance (WB-4)⁸⁹. ADB initially assisted the government develop long-term strategies to develop a financing mechanism for operations and maintenance (O&M) (ADB-22)⁹⁰. More recently, the ADB has financed the provision of a minimum 3 years routine and periodic maintenance on at least 1,000 km of the regional road network. The work is to be performed by private contractors under performance-based contracts (ADB-54)⁹¹. More information would be helpful about the relationship between the ADB approach and the World Bank supported policy of roads being self financing. Recently Japan has funded a project to renovate the Kabul Road Engineering Centre which will serve as the principal technical centre of the country's road administration and maintenance policy (JICA-5)⁹². The intervention might present an opportunity for additional assistance to link it closely with the donor emphasis on outsourcing maintenance to private contractors and on road financing being self-financing. USAID has a project to carry out routine and emergency maintenance on approximately 1,500 km of regional and national roads (USAID-43)⁹³.
- (ii) In Azerbaijan, the World Bank addressed the road authority's capacity to manage maintenance according to specified standards and provided training to that end

(WB-2)⁹⁴. The EBRD next set up 4 to 6 maintenance units which were to establish a 'service level agreement' with in-house 'suppliers' undertaking road maintenance work. Provision was also made for quality control audits (EBRD-10)⁹⁵. EBRD also plans to establish a long-term and transparent system of road financing in order to ensure continued maintenance of the extant public road network (EBRD-21)⁹⁶. TRACECA at the same time produced a maintenance manual (TRAC-2)⁹⁷. In 2010, CAREC plans to provide capacity development to staff responsible for road maintenance (ADB-86)⁹⁸;

- (iii) In Kazakhstan, the World Bank addressed developing the capacity of maintenance contractors and of the Department of Roads to supervise their work (WB-1)⁹⁹. CD, however, was confined to preparing tenders and administering contracts. Next, a small scale ADB technical assistance set out to assess future maintenance requirements. It included the development of a performance-based road maintenance plan, performance standards, and technical specifications (ADB-20)¹⁰⁰. There are presently three concurrent projects being implemented by ADB (ADB-75), World Bank (WB-9) and EBRD (EBRD-8)¹⁰¹, each with a component addressing maintenance. The ADB project is developing future maintenance requirements including a performance-based road maintenance plan, performance standards, and technical specifications. It also is to review Kazakhavtodor's strategy and funding allocations and make recommendations to strengthen its technical and operational capacity. The World Bank project is assisting Kazakhavtodor, the Committee for Roads and Infrastructure Development and KazdorNII to improve road sector planning, programming, budgeting, and management. The EBRD project is developing client-supplier relationships in the road sector and to prepare the sector for the introduction of performance based contracts. The World Bank is currently discussing a project part of which will develop a local capacity for road construction and maintenance (WB-13)¹⁰².

Consistent with the encouragement of the private sector to conduct road maintenance in Kazakhstan, EBRD is currently launching the first road sector PPP following international best practice on the section of CAREC routes 1b, 6b and 6c from the Russian border to Aktobe (EBRD-8)¹⁰³. At a regional level, ADB has studied PPP with a view to proposing measures to enhance PPPs in regional transport (ADB-50)¹⁰⁴. SPECA also has a small project to promote investment and

strengthening of PPP for the development and upgrading of the Asian Highway and Trans Asian Railway networks (SPECA-1)¹⁰⁵;

- (iv) In Kyrgyzstan, maintenance has been addressed in a number of ADB projects. The projects have had a primary focus on management, capacity development and outsourcing. Two TAs addressed maintenance. One reviewed the operation of the Road Fund and recommended changes to the financing mechanism for road maintenance (ADB-16)¹⁰⁶. A second set out to establish operational corridor departments to manage maintenance (ADB-48)¹⁰⁷. A loan project supported the outsourcing of maintenance, the most recent one, like the World Bank in Kazakhstan, also developing the capacity of local contractors to prepare tenders and to administer contracts (ADB-73)¹⁰⁸. There was also a technical assistance project to develop a maintenance program for regional transport corridors in Kyrgyzstan and Tajikistan with the intention to extend the model to other CARs which have similar topographic and climatic conditions (ADB-45)¹⁰⁹. CAREC has not yet planned to extend this model to other CAREC countries;
- (v) The approach in Mongolia has been quite different from those in Kazakhstan, Kyrgyzstan and Tajikistan. By the turn of the century, the Government had established 22 maintenance companies, 4 of which were private and the rest, state-owned. This action might be regarded as a step in the direction of commercializing maintenance operations. A 2001 World Bank project prepared a 3 year rolling maintenance plan (WB-3)¹¹⁰. In a current project, the ADB is helping to establish 3 road maintenance centres along the western regional road corridor (ADB-71)¹¹¹. There has been little attention on outsourcing maintenance to private companies, or on rationalizing the large number of companies initially established;
- (vi) In Xinjiang province, a World Bank project set out to improve the management of road maintenance, partly by improving computer systems and training staff in their operations and by establishing a training program in maintenance management. Part of the work was also directed at managing maintenance equipment effectively (WB-5)¹¹²;
- (vii) In Tajikistan, as reported under Kyrgyzstan, there has been an emphasis on outsourcing road maintenance. Earlier, however, the ADB invested in improving government managed road maintenance by revising the routine road maintenance manual and training chief engineers of road maintenance units to implement the practices described in the manual. Departmental personnel were also trained in the management of maintenance. The work developed short-term and medium-term program activities to implement a proposed maintenance strategy (ADB-26)¹¹³. EBRD separately developed a road maintenance

¹¹³ TA 4294TAJ: Strengthening implementation of road maintenance, 2004-2007

development plan (EBRD-11)¹¹⁴. In the more recent period, the attention has switched to gearing up the private sector to be able to bid for maintenance contracts and to manage them effectively;

- (viii) There has been little activity in the road sector in Uzbekistan and little attention directed at road maintenance. A JICA project addressed road construction equipment (JICA-8)¹¹⁵ and an ADB project provided assistance to a State owned equipment company to develop business and marketing plans, improve financial and management accounting practices and to introduce a more commercial charging system (ADB-53)¹¹⁶

16. A CAREC objective is to have a set of well maintained road corridors which are operational in all weather conditions. A corridor is more likely to be used by international freight carriers if the whole corridor is well maintained and driving conditions are safe whatever the weather conditions. In a number of countries, the idea of a road fund has been accepted which secures a guaranteed level of funds for maintenance. The question of delivery of maintenance formerly was provided by road departments. Private sector contractors were non-existent. There might be an important opportunity to provide assistance to private contracting companies to develop their competencies in managing road maintenance contracts in a commercially competitive environment. The transfer to the private sector has started in Afghanistan, Kazakhstan, Kyrgyzstan and Tajikistan. It probably would benefit from assistance to develop operations so that they approach best practice.

17. Securing funds for road maintenance has been touched on by projects in some CAREC participating countries, though there still appears to be much to be done. In Afghanistan, the World Bank is attempting to secure sustainable arrangements for cost recovery from road users of the section of the regional road system which it has funded. Other donors might not have paid the same attention to securing the necessary funds. The US Government Accountability Office reported that “without a sustainable road maintenance program, newly constructed roads will ultimately deteriorate, expected benefits will not materialize, and the billions of dollars spent on road reconstruction would be wasted”¹¹⁷. If these remarks are valid, there is an opportunity to assist the Afghanistan Government to improve further the road maintenance environment.

18. On the issue of road charges in Azerbaijan, the World Bank has conducted a road user charges study (WB-2)¹¹⁸. An ADB country concept paper is planning a study to address road sector policy issues involving rationalizing road user charges for maintenance funding (ADB-100)¹¹⁹. There is also a planned CAREC regional study for 2009 to establish road user charging regimes fully compatible with the principles of the European Conference of Ministers of Transport (ECMT), while allowing the CAREC countries to equitably recover the costs of providing and maintaining good road infrastructure from foreign as well as domestic traffic (ADB-80)¹²⁰.

19. Ensuring that the starting point for a maintenance regime is that a road has been constructed or rehabilitated to a sufficient standard in terms of quality was, to some extent,

¹¹⁹ ADB: Southern Road Corridor Improvement, 2005

¹²⁰ REG TA2: Equitable Road Maintenance User Charges and Cross Border Fees, 2009-2011

addressed in Afghanistan, Kazakhstan and Xinjiang province through the provision of laboratory equipment to check construction and maintenance standards (ADB-43, ADB-3, ADB-55)¹²¹. There has been no similar assistance to other CAREC countries.

20. For a road maintenance system at least partly outsourced to the private sector to work effectively, there remain a number of issues which might present opportunities for CAREC support. They include the question of contestability to ensure that there is a level playing field in competition between privately owned and state owned companies (Mongolia, for example, had 4 private companies and 22 state owned operating maintenance businesses). A key aspect of contestability is accurate activity accounting, especially on the part of state owned companies, to ensure that there are no subsidies, especially hidden ones, providing them with an unequal advantage in competitive bidding. The issue might also benefit from assistance to improve management accounting systems in both state owned and private sector organizations.

21. A second issue which might benefit from a study is the overall make up of an effective road maintenance industry. One aspect of CAREC road corridors is that they traverse long lengths of very lightly populated territory, especially in Kazakhstan and Mongolia, and in the mountainous areas of Kyrgyzstan and Tajikistan. Small companies might be able to undertake the requirements of routine maintenance, but there remains the question, especially in isolated areas, of whether that work would be sufficient to sustain a business financially. Such companies certainly would not have the capacity to undertake major maintenance work because they would not be able to afford the appropriate machinery. Plant leasing companies (for example, a state owned company was being assisted by an ADB project in Uzbekistan (ADB-53)¹²² and a World Bank project in Mongolia (WB-3)¹²³) might provide part of the answer. Such companies, however, will be driven first by profitability objectives and not by the need to keep a road network to a certain standard. As a consequence, critical plant might be in short supply from time to time, especially where emergency work is required after some natural event. The question of emergency responses is also important, especially in terrain subject to extreme weather conditions and other natural events like earthquakes. In wealthy countries, these situations are addressed usually by large companies with diversified construction interests. A second issue which a study might address is the approach that international companies take to developing their contracting and maintenance capacities.

22. The question of plant for road maintenance is an important one. Most CAREC countries (PRC and Afghanistan being the exceptions) inherited plant sourced from Russia. The plant usually was based on simple technologies. Plant maintenance technicians were well trained to maintain it. There was a limited number of models, resulting in spare parts inventories being efficient. Donor assistance brings with it an opening up of access to a much bigger selection of models from a more diverse market. Competitive tendering ensures that the lowest bidder supplies plant, regardless of its fit with the plant already owned by a maintenance organization. Some donors restrict tenders to members and some bilateral donors to home based companies. Increasing the number of varieties of items of plant can have implications for the costs of inventory management and risk management. Risk management, among other things, would have to address the possibility of an expensive item of plant becoming inoperable for a period of time because of the lack of a spare part. In Kazakhstan, for example, a winning tender supplied 19 Renault, Grün and Wirtgen multifunctional trucks in a country in which it is possible that none of these companies had significant representation, especially in some of the remoter routes that

¹²¹ TA 4675AFG: Capacity Building for Road Sector Institutions, 2006; L 1774KAZ: Almaty Bishkek Regional Road Rehabilitation, 2000-2007; L 2393PRC: Xinjiang Regional Road Improvement Project (Korla–Kuqa Section), 2007-2012

¹²² L2403UZB: CAREC Regional Road Project, 2007-2011

¹²³ P 056200: Transport Development, 2001-2005

¹²⁴. There might be advantages for CAREC to consider how this question might be addressed effectively without undermining the procurement principles of international donors.

23. All CAREC participating countries had projects which supplied maintenance plant and equipment. Occasionally, the purchase of equipment seemed to be contrary to the trends in the development of maintenance approaches being supported by another donor. For example, in 2007, EBRD provided road maintenance equipment to be employed by the Tajikistan Ministry of Transport and Communications to carry out essential maintenance work on its road network (EBRD-7)¹²⁵. At about the same time, an ADB project set out to support outsourcing maintenance to the private sector (ADB-74)¹²⁶.

F. Road Safety

24. Road safety has been a major interest of donors. Road statistics indicate that accidents are high and road fatalities very high across the CAREC region. Donors have generally paid great attention to the engineering aspects of road safety on the roads they have funded. More broadly, there has been support for the establishment of an organisation in some countries which would be responsible for developing road safety policies and generally promoting road safety in the country. In Kazakhstan and Kyrgyzstan, ADB established national road safety councils (ADB-3, ADB-4)¹²⁷. In Kyrgyzstan, ADB also provided training on Microcomputer Accident Analysis Package (MAAP) software (ADB-10)¹²⁸. In Xinjiang province, the World Bank provided assistance in capacity development for the multi-agency Leading Group for Traffic Safety (WB-5)¹²⁹. ADB is providing similar support to the Transport Safety and Security Unit in Tajikistan (ADB-51)¹³⁰. Afghanistan, Azerbaijan, Mongolia and Uzbekistan do not appear to have received donor assistance to establish a peak road safety organisation.

25. Preparation of road safety plans was supported by the World Bank in Azerbaijan, Kazakhstan, and Xinjiang province (WB-2, WB-1, WB-5)¹³¹. There might be value in CAREC preparing a case study of these plans, particularly of their underlying principles, so that other participating countries can prepare their own in the knowledge that there will be broad consistency in such plans across all participating countries.

26. The collection of road accident data has been supported in Mongolia and Kazakhstan by the World Bank (WB-3, WB-1)¹³². In Kyrgyzstan, ADB supported the purchase of MAAP and

trained users in its application (ADB-10)¹³³. In Kazakhstan, ADB is proposing to install an intelligent transport system to improve road safety (ADB-75)¹³⁴.

27. There was donor support for public affairs programs in road safety in two World Bank projects in Kazakhstan (WB-1, WB-9) and in ADB projects in Mongolia (ADB-24) and Xinjiang province (ADB-55)¹³⁵. CAREC might consider the value of developing consistency across countries in their treatment of road accident data and in the promotion of road safety campaigns. Special attention might be given to Afghanistan and Uzbekistan where there does not appear to have been donor support for road safety other than in engineering appropriate road safety standards into road designs.

28. For the future, CAREC is proposing a regional project to undertake a safety audit of CAREC corridors and expects it to result in proposals to cover a range of safety improvement measures covering infrastructure, management, technology and public affairs (ADB-94)¹³⁶. There might be value in extending the objectives of the project to ensure that overall management issues relating to road safety are addressed and the involvement of other agencies like the police in road safety, is also considered.

G. Capacity development

29. Capacity development has generally been focused on government departments. A small amount has been directed at training provided to private sector contractors mentioned under paragraph 15(iii). Almost all the participating countries in CAREC started from much the same institutional base in terms of road management. Consequently, there might be advantages in addressing training, at least in part, on a regional basis.

30. TRACECA has been a significant player in training. One project targeted top level decision-makers at Ministries of Transport, Railways, Customs and Port Authorities and, separately, the heads of border and customs stations, ministerial departments, railway departments, port and ferry operators and stakeholders from the road transport industry. A training needs analysis was followed by the development of training material for each of the two groups and the delivery of training programs (TRAC-1)¹³⁷. This is the only donor funded project which has been directed at management levels. In a current project, TRACECA is extending its work to training establishments, to ensure that teaching staff are familiarised with latest transport planning techniques and tools, investment appraisal techniques and other methodologies including environmental analysis of transport sector investments. It is improving training through improved pedagogical skills, teaching techniques and curricula development methods. There is a particular focus on multi-modal transport and interoperability to ensure that training institutes and internal departmental training areas are able to deliver 'state-of-the-art' training in these areas (TRAC-5)¹³⁸. This project is also to produce an appraisal of the potential for establishing a regional training centre for advanced transport training. The establishment of such an institute might be of interest to CAREC in its development of the CAREC Institute.

¹³³ TA 3531KGZ: Improvement of Road Sector Efficiency, 2001-2004

¹³⁴ L 2503KAZ: CAREC Transport Corridor I (Zhambyl Oblast Section) [Western Europe–Western People's Republic of China International Transit Corridor] Investment Program, 2008-2014

¹³⁶ REG TA36: Regional Road Corridor Safety Auditing, 2010

¹³⁷ TRACECA: Capacity Development for Senior Transport Officials, 2003-2005

¹³⁸ TRACECA: Strengthening of Transport Training Capacity in NIS Countries, 2008

31. ADB has also addressed the question of the quality of training institutions in a non-TRACECA country. In Afghanistan it is strengthening the curriculum of the road construction department of Kabul Polytechnic University (KPU) in project management and procurement, and social, resettlement, and environmental impact assessments (ADB-44)¹³⁹. So far, the focus is limited to supporting the development of investment projects. There might be value in extending the scope to include the subject areas addressed by TRACECA in its region.

32. Much donor assistance for capacity development has been directed at improving project management capacity. ADB provided significant assistance to the Afghanistan Ministry of Public Works (MPW) in developing curricula and training courses for project management and procurement and upgrading computer equipment in the project management and procurement unit of MPW. It also provided training for Ministry of Transport officials in their new role as regulators (ADB-44)¹⁴⁰. An earlier World Bank project also provided capacity building to the Ministries of Transport and Public Works (WB-4)¹⁴¹. ADB has also provided project management support in Azerbaijan (ADB-68)¹⁴².

33. Building institutional capacity has been a significant focus of capacity development interventions. ADB is planning to address this issue with the Road Transport Service Department in Azerbaijan (ADB-100)¹⁴³, the Bishkek–Torugart Road Corridor Management Department in Kyrgyzstan (ADB-76) and the Road Department of the Ministry of Roads Transport and Tourism in Mongolia (ADB-67)¹⁴⁴. The World Bank had the same focus for Azerbaijan’s national road organization Azyol (WB-2) and the Transportation Administration Bureau in Xinjiang province (WB-5)¹⁴⁵. A number of other issues have been addressed by individual projects. Given that TRACECA has started a process of institutionalizing training, there might be value in CAREC performing a training audit to build on its recently completed training needs analysis which would focus on the capacity to manage and deliver training, especially that identified in the training needs analysis. Training issues that might also be considered might include general management, policy development, regulation and contract management.

34. ICT development has featured in a number of projects. A range of different issues were addressed. Afghanistan received ICT equipment for project management and procurement and, separately, to install a management information system (ADB-44, ADB-54); Azerbaijan to improve its road data bank (WB-7); Kazakhstan to install an Intelligent Transport System (ADB-20); Xinjiang Province for road maintenance management (WB-5); and Uzbekistan for a road network data base system (ADB-53)¹⁴⁶. On a regional basis, UNESCAP has set out to develop an Asian Highway (AH) database to provide member countries with a computerized database as a tool which could facilitate identifying/prioritizing the AH routes/road sections to be upgraded and which could, consequently, facilitate the dialogue between countries, international lending

¹⁴⁵ P040716: Highway Project, 2001-2005; P058447: Third Xinjiang Highway Project, 2003-2007

¹⁴⁶ TA 4828AFG: Road Rehabilitation and Capacity Building Cluster, 2006; G 0081AFG: Road Network Development Project I (Bala Murghab to Leman), 2007-2012; P094488: Second Highways Project, 2006-2011; TA 4091KAZ: Aktau-Akyrau Road Improvement Project, 2003; P058447: Third Xinjiang Highway Project, 2003-2007; L 2403UZB: CAREC Regional Road Project, 2007-2011

agencies and other donors (ESCAP-6, ESCAP-7)¹⁴⁷. A relevant question for CAREC might be the degree to which particular ICT systems are developed in harmony with each other so that methodologies are similar and data is comparable. If Kazakhstan, for example, has an intelligent transport system to guide drivers, are there advantages in CAREC seeking to support such a system along all CAREC corridors? A second issue might be the importance of transport organisations, particularly government ones, possessing an ICT strategy and master plan. There are often long term disadvantages for organisations and agencies acquiring stand alone systems from donors for particular purposes. They can be difficult to integrate with other systems. There might be value in considering having a workshop on ICT and transport, to examine common issues which might confront participating countries.

35. On the question of ICT and data bases, the US Government Accountability Office observed in Afghanistan that: “there is a lack of comprehensive information on all donor-funded road projects in Afghanistan, as donors are not reporting road project data systematically and regularly to the Consultative Group for the Transport Sector, a joint Afghan government and donor group responsible for collecting these data”¹⁴⁸. CAREC might consider the value of establishing a central information bank to keep up to date information about developments and the situation in each corridor. That information could be made available publicly through a web site and would be of interest to freight forwarders and freight companies. Such an information bank would require its own source of funds. That might ultimately be achieved by some kind of levy. It will be very dependent on accurate information being supplied by participating countries and by donors. UNESCAP has attempted to collect such information, but submissions are far from complete.

H. Overlaps and Gaps

36. There are a number of potential overlaps:

- (i) In Afghanistan, the World Bank produced a strategic plan for the transport sector and the ADB a master plan for road network improvement;
- (ii) In Azerbaijan, the ADB has signalled the possibility of its addressing a number of policy issues in a concept paper and EBRD also appears to have a transport policy review there on its agenda;
- (iii) In Mongolia, the ADB prepared a transport strategy and, separately, a road map to improve integration of the transport sector network;
- (iv) In Kazakhstan, IDB financed a rehabilitation of 185 km. of road between Astana and Karaganda. CAREC's forward plans for 2009-2012 plan to renovate the section. The estimated cost of \$1 billion suggest that it will be an extensive length;
- (v) In Azerbaijan, the east west highway has been extensively renovated and upgraded in the period 2000-2008. CAREC is planning further work on 534km in the period 2007-2015;

¹⁴⁷ JPN99722: Promotion, Development and Formalization of the Asian Highway (Phase II) - Asian Land Transport Infrastructure Development (ALTID) Project, 2001; JPN97530: Upgrading of the Asian Highway Routes - Asian Land Transport Infrastructure Development (ALTID) Project, 2001

¹⁴⁸ Government Accountability Office, **AFGHANISTAN RECONSTRUCTION - Progress Made in Constructing Roads, but Assessments for Determining Impact and a Sustainable Maintenance Program Are Needed**, July 2008

- (vi) EBRD renovated the road between Aktau and Beyneu in a project which started in 2003. CAREC has programmed rehabilitation work on the same section for 2009-2012 as cracks threaten the integrity of the road;
- (vii) The ADB rehabilitated the 55 km Naibabad-Hairatan road link to Uzbekistan in a project starting in 2003 and CAREC is planning a further rehabilitation in 2008. The road is built along a very unstable sand surface;
- (viii) In Azerbaijan, the World Bank provided training to staff responsible for road management between 2001-2005. CAREC is planning further training in 2010. This might be a case to encourage institutionalizing such training in a training academy;
- (ix) Both ADB and EBRD have projects in Azerbaijan which address performance based contracts and performance standards;
- (x) In Tajikistan, both ADB and EBRD have assisted in the preparation of road maintenance development plans;
- (xi) In Azerbaijan, the World Bank has conducted a road user charges study. ADB has a concept paper for a project for a study to address road sector policy issues which would include road user charges and their rationalization;
- (xii) There have been differences in the application of plant purchases for plant maintenance. EBRD, for example, has provided plant for the Ministry in Transport and Communications in Tajikistan close to the time when ADB was seeking to outsource the provision of road maintenance to the private sector.

37. There are a number of gaps in the rehabilitation of road corridors which have been itemized in paragraph 12. Other potential gaps/inconsistencies include:

- (i) Different approaches to maintenance, between outsourcing it to the private sector and having it conducted by government agencies;
- (ii) Provision of maintenance equipment which is difficult to integrate into the current stock of equipment carried by an agency;
- (iii) Provision of ICT systems which might be stand alone and difficult to integrate into an overall system;
- (iv) Laboratory equipment for quality control which has been provided only to a number of participating countries;
- (v) Training which is institutionalized into training establishments so that it is sustainable;
- (vi) Numerous interventions in one country which, if effective, could be applied in other countries.

I. Opportunities

38. Only two of CAREC's road corridors are in the course of being completely reconstructed or rehabilitated, and those two are comparatively short lengths in Mongolia, one of which to Inner Mongolia has not been attached to the CAREC network. All others appear to have gaps in their rehabilitation or construction programs. Freight traffic remains low. Road lengths are long which has implications for maintenance costs. The section on rail made a case for prioritizing two corridors to Europe. There might be a case for prioritizing CAREC's road corridors in line with any prioritization of rail corridors, and directing investments initially to completely

modernizing two alternative routes to Europe, one through Russia and the second through Aktobe and across the Caspian Sea. That would produce alternative routes through different countries which would put competitive pressure on the countries involved in their tariff setting for transit freight. It would also physically attach Azerbaijan to the Central Asian core of the CAREC region. Each of these corridors could link up with exits to PRC and Afghanistan. Parts of other corridors could also be prioritized so that individual countries could link into the priority corridors effectively. CAREC's proposed REG TA6 (ADB-211) might be the vehicle for doing this, but that might require it being started before 2011 and its funding increased.

39. Consistency in policy development and capacity development across the participating countries might benefit from attention. There might be value in working towards a situation in which similar policy and regulatory frameworks govern the operations of the road system and that government agencies apply the same sets of standards across the road sector. There also might be a case for CAREC to build on the most promising initiatives started by TRACECA, particularly in the areas of harmonization of policies and in a systematic approach to training based on an agreed set of standards, management and technical competencies. CAREC might also consider the value of approaching the work on a regional basis with the flexibility to supplement the work and address detail with specific support to a particular country. That would apply when a country considers that it needs the additional assistance to catch up with developments elsewhere.

40. There does seem to be competition for funding in some countries between roads in the CAREC network and those outside it. Some of the latter roads are part of the networks of other regional organisations. The country priorities might be cause for CAREC to reconsider its own proposed network and consider including these other routes in its network which would also ensure that its network is in keeping with regional priorities. Such funding also might lead to CAREC examining how it allocates its own funds to road priorities.

41. Diversified construction companies are important to the rehabilitation and maintenance of road corridors. Developing locally owned companies is likely to be important and, apart from the construction industry in two countries receiving training in bid management, there has been little attention to the needs of this sub-sector. With growth, such companies would then present opportunities for financing from the private finance arms of IFIs and from EBRD to acquire construction equipment and plant and, possibly to develop more sophisticated computer systems to help them manage their operations. It might be in CAREC's interests to examine means whereby locally owned construction industries can be assisted to develop with a particular focus on removing barriers to their being able to bid for internationally financed projects. A second opportunity, discussed earlier, lies in improving accounting practices and the provision of good management accounting information to enable management to manage operations more effectively and to provide the financial information necessary for realistic tendering.

42. Important opportunities might include systematic support for:

- (i) The CAREC Institute seeking a formal linkage with any proposed TRACECA regional training centre for advanced transport training, as discussed in paragraph 30;
- (ii) The private sector contracting industry so that it is competent to manage complex maintenance requirements. The support might also address the question of acquiring and managing complex items of maintenance equipment. Such support might also address the competencies of Department of Roads to manage contracts effectively and, where state owned companies compete for maintenance contracts, developing and applying a robust policy of contestability;

- (iii) The development of a data base on the CAREC road network which reports up to date development, conditions and other issues for the benefit of users and planners;
- (iv) The development of effective ICT systems and ICT architecture to manage road development. There might be value in considering having a workshop on ICT and transport, to examine common issues which might confront participating countries targeted at senior decision makers, some of whom might not have a deep knowledge of many management issues concerning ICT;
- (v) A study to reconcile the transport and road policies and plans of participating countries and CAREC's own regional road plans;
- (vi) Working closely with the private finance arms of IFIs to establish what interventions CAREC might make to improve the environment for PPPs and for private sector financing of road activities;
- (vii) A study of the opportunities for benchmarking standards, which could be applied to a number of areas including road maintenance and road safety.

ADB-80		REG	To be determined	Equitable Road Maintenance User Charges and Cross Border Fees	REG TA2	The goal of the TA is to establish road user charging regimes fully compatible with the principles of the ECMT, including nondiscrimination and transparency, while allowing the CAREC countries to equitably recover the costs of providing and maintaining good road infrastructure from foreign as well as domestic traffic. The TA will assess and recommend options for CAREC countries to charge for use of their roads, with a particular focus on regional harmonization. Factors to take into account will include: i) Cost recovery for the road authority (under different conditions of terrain, climate, level of service provided and consequent vehicle operating economies) ii) Recommendations and resolutions by international bodies such as ECMT, UN ECE and UN ESCAP iii) Overweight interdictions or fee scales iv) Transparency and probity in collection of fees v) Present charges on domestic transport (registration, fuel taxes, tolls etc) vi) The permit regimes	2009-2011	1.00
ADB-80						vii) Current inadequacies or failures of Road Funds These outputs will serve as benchmarks for CAREC countries to refine their individual approaches.

				Development (ALTID) Project		published as part of this project.		
ESCAP-12		KAZ, MON, PRC	UNESCAP	Study on road network connecting China, Kazakhstan, Mongolia, Russian Federation and Korean peninsula	ROK98649	The immediate objective of the study is to assist the countries concerned to develop their policy, related technical standards and road transport facilitation measures regarding the development of national highway routes of international importance [Asian Highway (AH) network]; as a part of integrated regional approach to the development of reliable and efficient intraregional and interregional land transport linkages in the North- East Asia and in Asia to facilitate international and bilateral movement of goods and people: i. identify potential international road networks connecting China, Kazakhstan, Mongolia the Russian Federation and the Korean peninsula for development of efficient road connection among these countries. ii. identify the international roads connecting these countries which, will contribute to the formulation of Asian Highway network; On completion of this study the status and national standards of international road networks would be reviewed, some international routes would be identified to form part of the Northern Corridor of the Asian Highway connecting the North-East Asia and Europe.	2001-2002	0.07
ESCAP-13		AFG, AZE, KAZ, KGZ, MON, PRC, TAJ, UZB	UNESCAP	Development of a Regional Intergovernmental Agreement on Asian Highway Network - Asian Land Transport Infrastructure Development (ALTID) project	JPN02933	The expert group meeting scheduled for 24-26 April 2002 is expected to complete the formulation of the Asian Highway network. For regular regionwide review of the identified network's development and timely coordination between national and regional transport networks it is necessary to establish a coordination mechanism among countries. A regional intergovernmental agreement for the Asian Highway network could establish such a mechanism to guide the coordinated development of the identified networks in member countries, as it will define the AH routes and numbering system, the mechanism for revision of networks, set design standards, and define route signs. The expert group meeting is expected to develop an action plan for Asian Highway promotion and development. The project will also support implementation of some the activities for its promotion.	2002-2004	0.14

ESCAP-14		AFG, AZE, KAZ, KGZ, MON, PRC, TAJ, UZB	UNESCAP	Identifying Investment Needs and Development Priorities for the Asian Highway Network and Related Intermodal Connections and Freight Terminals	JPN03005	Currently 17 per cent of the 140,000 kilometers of the AH network is below the agreed minimum standards, and upgrading and improvement of this network is one of the priorities for members. Many national governments in the region have limited resources for investment in the transport sector. In this backdrop, the project aims to provide an overview of state development of the Asian Highway network including investment requirements, identify national and subregional priorities and showcase identified priority projects. These overviews can be used as the basis for transport investment planning at the national and subregional levels and will provide a framework for development assistance from bilateral donors and multilateral banks: i. national transport planners and policy makers of participating countries with subregional overviews of investment needs and priorities for development of the Asian Highway network, with a particular focus on the missing or substandard Asian Highway links and freight terminals. This analysis can be used as the basis for transport investment planning at the national and regional level and will also provide a framework for development assistance from donors and international financing institutions.	2003-2006	0.12	
ESCAP-15		AFG, AZE, KAZ, KGZ, MON, PRC, TAJ, UZB	UNESCAP	Promotion and development of the Asian Highway: Capacity building for implementation of the intergovernmental agreement	JPN05006	The project aims to promote and encourage governments to improve implementation and decision making on agreements related to regional transport networks and initiate public private partnerships for infrastructure development. Building on the momentum gained by the adoption and signing of the Intergovernmental Agreement, the project will focus on the promotion of the Intergovernmental Agreement and capacity building of policy makers, transport planners and government officials of implementing agencies in the areas of: (a) implementation and administration of the Agreement; (b) road safety; and (c) public-private initiatives for development and upgrading of international transport connections. The project will support organization of regional Working Group Meeting and a regional training workshop.	2005-2007	0.08

				asian highway: Upgrading of asian highway priority routes		Network is to develop the adopted highway network in conformity with the Asian Highway classification and design standards. Currently 16 per cent (22,000 km) of the 141,000 Kilometres of the Asian Highway network is below the agreed minimum standards. Mobilization of financial and technical resources to upgrade and improve the Asian Highway network to the requirements of international transport is a major challenge for all participating countries. The project aims to assist least developed, landlocked and transit member States as well as economies in transition in mobilizing resources towards bringing the Asian Highway Network to the minimum standards, as well as to upgrade those sections which are insufficient to meet current levels of traffic demand. The project will: (a) support analytical and technical assessment of selected priority Asian Highway routes; and (b) convene regional/subregional training workshops/seminars and a regional investment forum. In particular, the project will bring a "cross-country" or regional perspective to the analysis, which is otherwise not usually considered in investment project assessments.			
ESCAP-24		KAZ, KGZ, PRC	UNESCAP	Transport pricing and charges for promoting sustainable development (99/TCTID-Z/008/NET-8)	NET99728	Intended impacts of the project include: i. improving the efficiency with which transport infrastructure and services are utilized; ii. increasing internal sources of funds for financing the development and maintenance of transport services and infrastructure facilities; iii. creating an environment which is more conducive to attracting private sector interest in the provision and operation of transport services and infrastructure facilities; " iv. presenting transport users with a set of prices which reflect the resource cost of providing facilities and services of different alternative modes of transport; and v. utilizing prices as one of the instruments for internalizing the externalities generated by the transport sector. vi. promoting more equitable spatial distribution of economic activities and easier access to social amenities with the aim of alleviating poverty in the region	-2001	0.07

¹ The report examines assistance since 2000.

A. Background

1. The CAREC region, with the exception of Afghanistan and PRC, has inherited the railway system of the FSU. The system was designed without reference to future borders between nations that were not conceived of at the time. Rail lines and roads, as a consequence, tend to head in the direction of Russia. Roads and railways criss-cross borders in a few areas which produces great inefficiencies for border crossing management as well as requiring numerous agreements between countries on tariff structures, maintenance regimes and traffic management. As a consequence, there has been a push by individual countries to construct new lines to ensure routes remain within the jurisdiction of their country.

2. For a significant period since independence, railway systems tended to be underfunded. Maintenance and the upgrading of systems to new technologies were particularly neglected. To some extent, that still remains the case, though there has been some investment in the past decade. Much of the rolling stock remains old. Other common issues affecting the operations of rail systems include legislative and regulatory frameworks which would benefit from amendments, non-commercial tariff setting, unwieldy management practices, poor demand forecasting making planning difficult, overmanning, inefficient operational practices, a lack of a commercial orientation, weak marketing, a non-customer oriented culture, and incomplete human resource management policies and systems.

3. Through the region, there are a number of slightly different railway networks formulated by different interest groups. UNESCAP, in its Asian Land Transport Infrastructure Development (ALTID) project, has formulated a Trans-Asian rail network and prioritized certain freight routes. Additionally, CAREC, TRACECA (Transport Corridors Europe, Caucasus and Central Asia) and EurAsEc (Eurasian Economic Community) have, each, identified a network of corridors. All these interest groups differ in membership:

- (i) TRACECA includes the Baltic states (other than Russia), Azerbaijan and the Central Asian Republics. Its primary focus is on developing transport corridors east to Afghanistan and PRC. Of CAREC's participating countries, Afghanistan, Mongolia and PRC are not members;
- (ii) EurAsEc (Eurasian Economic Community) consists of Belarus, Kazakhstan, Kyrgyzstan, Russia, Tajikistan and Uzbekistan. EurAsEc has an objective to develop a unified transport system. Priorities include the issue of unified tariffs, increasing the flow of goods, simplifying customs procedures, completing intra-state procedures on signed agreements, and establishing transnational freight forwarding corporations. EurAsEc tends to work at the planning level and persuading its membership to implement the plans through self-financed investment.

4. TRACECA is funded by the European Community. Its rail networks are Euro-centric. Russia is a major player in EurAsEc. Its networks are Russo-centric. EurAsEc has an association with the Eurasian Development Bank, the membership of which currently comprises Russia and Kazakhstan. CAREC has no location focus. It is driven by where the best economic interests lie. Its membership which includes a number of IFIs provides it with access to significant levels of investment funding.

5. All four organizations have identified a network of rail corridors to develop. While the core of the four sets of corridors overlaps, there are a number of routes which do not. For development financing, the overlapping core area would benefit from coordination between the four organizations for prioritizing investment activity. CAREC has four rail corridors heading north and north-westerly through CARs to Russia and a fifth through Mongolia. Freight traffic is

not yet heavy in, through and from the region. There are also investment funds available as well as a question about the ideal railway gauge given the differences between European, FSU and Chinese gauges. There might, therefore, be value in restricting the number of corridors to be developed first to a small number and fund them to the standards that are required before moving to other corridors.

6. There are differences in CAREC, TRACECA, UNESCAP and EurAsEc rail routes. They are:

- (i) the part of TRACECA's route 21 which goes between Turkmenbashi in Turkmenistan and Alyat in Uzbekistan. CAREC has a road corridor following the same route. Turkmenistan is not a member of CAREC;
- (ii) parts of TRACECA's route 23: Karshi to Termez via Kerkichi in Turkmenistan, a spur from Kurgan-Tube in Tajikistan which terminates in Kulab. This spur which is also on EurAsEc's route 10r;
- (iii) the part of TRACECA route 30 from Turkmenabad to Naymankul in Turkmenistan passing through Uzbekistan and Urgench between Gazojak and Dushkavuz;
- (iv) the part of TRACECA route 32 from Makat through Subarkuduk and Kandagash in Kazakhstan which is also part of EurAsEc's route 8b and ESCAP's Trans-Asian Railway network;
- (v) EurAsEc routes 2 and 5 which enter Kazakhstan through Mamlutka and proceed to Astana through Petropavlosk and Kokchetav. They are also part of ESCAP's Trans-Asian Railway network;
- (vi) the Trans-Asian Railway network has a line between Aktobe and Kairak which is not shared by any of the other three corridors.

B. Planning

7. In its Regional Transport Sector Roadmap (2005)², CAREC established five strategic priorities, one of which was to restructure and modernize railways to provide quality and efficient services through private sector participation and improved corporate governance. A second strategic transport priority was to improve sector funding and management to ensure that the regional transport network is developed and maintained properly.

8. There have been a number of transport plans prepared for individual countries in the CAREC region. There is no overall railway development plan for the region and none specifically planned by CAREC, though UNESCAP has undertaken a comprehensive technical assessment on the current status of the Trans-Asian Railway (TAR) network, with particular emphasis on the through-movement of containerized freight traffic along TAR corridors, leading to a drafting of an Intergovernmental Agreement on the Trans-Asian Railway Network (ESCAP-20)³. The status of any agreements would be helpful to know. An overall plan might, however be prepared by ADB's Transport Sector Study which has a requirement for the formulation of a transport sector strategy (ADB-50)⁴. UNESCAP, in its ALTID project, has undertaken a review of the development priorities for rail in a subregional and regional context to help member governments agree on priority projects, make efforts at achieving greater synchronization in

² ADB, Connecting Central Asia: A Road Map for Regional Cooperation, 2005, p. 53

³ ROK04001: Development of an Intergovernmental Agreement on the Trans-Asian Railway Network, 2004-2007

⁴ TA6347REG: Central Asia Regional Economic Cooperation: Transport Sector Strategy Study, 2006

their implementation, allocate resources and acquire greater leverage to approach international financial institutions for assistance (ESCAP-21)⁵ The Eurasian Development Bank is planning a feasibility study of road and railway infrastructure development in its 'community' which might be restricted to Kazakhstan or to the EurAsEc community (EDB-1)⁶.

9. At a systems level, TRACECA has prepared an overall master-plan for modernisation of the Central Asian Railways telecommunications and signalling systems (TRAC-17)⁷. Such a plan could form the basis of CAREC supporting a study to extend the parts that participating countries support to Afghanistan, Mongolia and Xinjiang Province.

10. For Uzbekistan, in 2000, ADB prepared a master plan for the institutional development of the sector but focusing on the railway operating company (ADB-117)⁸.

11. Information would be helpful about the extent to which countries have adopted master plans and the way in which they continue to update them to take account of technological advances and changing economic circumstances. Such information would be helpful in monitoring the synchronization between the plans of each country.

12. CAREC did commission a reassessment of its earlier regional strategy which produced a draft strategy⁹. The study produced a number of projected investments for the rail and road sectors. CAREC has also proposed a number of investment projects in the rail sector. CAREC's proposals are different from those nominated in the reassessment 'draft strategy'. CAREC's investment proposals for Kazakhstan, however, reflect the routes taken by UNESCAP's container block train demonstration runs, especially from PRC to Europe and Russia. CAREC has no investment proposals for Mongolia which provides a second route taken by UNESCAP's container demonstration runs from PRC (ESCAP-1)¹⁰.

13. There are a number of plans which address rail transport within a country:

- (i) In Afghanistan, the World Bank conducted a Transport Sector Review in 2003 to develop an institutional and policy framework for the sector. It did not include investment plans for the rail system¹¹. The proposed transport policy committed railways to the private sector. The policy envisaged that the government would only participate in such developments provided that they demonstrated economic benefits which could not be captured by private investors¹². At much the same time, the World Bank also helped prepare an overall vision and strategic plan for the transport sector, which adhered to the policy statement (WB-4)¹³;
- (ii) In Azerbaijan, the ADB has recently conducted a study for a railways sector development program (ADB-125)¹⁴ which followed a transport sector review which included rail services. The latter study set out to produce a medium-term (2006–2016) transport sector development strategy, covering the roles of Government, private sector, and regulatory bodies (ADB-29)¹⁵. EBRD also has a

transport policy review on its agenda with a project to develop and implement a national sustainable transport policy, with a focus, where appropriate on further approximation of legislative and regulatory frameworks with European and international standards, in particular for safety and security (all transport modes) (EBRD-21)¹⁶;

- (iii) There have been no rail master or other rail plans for Kazakhstan which, for Central Asia, forms the spine of UNESCAP's transport network from PRC to Russia and the rest of Europe;
- (iv) In Kyrgyzstan, the ADB has recently embarked on the preparation of a transport master plan for the period 2010-2025 which will develop long-term investment programs for railways (ADB-76)¹⁷;
- (v) In Mongolia, the ADB has prepared a transport strategy for the period 2005-2015 based on a review of sub-sector master plans (ADB-32)¹⁸;
- (vi) In Tajikistan, the ADB is currently preparing a transport master plan. It will identify priority directions for each subsector to improve policy and regulations, increase outputs and efficiency, and propose an investment program (ADB-49)¹⁹;
- (vii) In Uzbekistan, the ADB prepared a railways master plan in 2004 (ADB-120)²⁰ which was followed by a recently completed transport sector plan broken down to short-term (2006–2010), medium-term (2011–2015), and long-term (2016–2020) plans and a sector road map for transport sector development including railways (ADB-46)²¹. In 2002, EBRD prepared a railway sector study assessing the possibility of establishing railway production facilities in Uzbekistan (EBRD-19)²².

14. There is considerable variation in the planning treatment of railways among CAREC participating countries:

- (i) ADB's transport sector strategy will be important, particularly if it takes cognizance of other sub-regional developments, especially UNESCAP's container routes. Their routes are north through Kazakhstan and Mongolia. As yet, they have not included westerly routes across the Caspian. These latter routes seem likely to be developed for the rail transport of oil. As a result, they might be able to offer very competitive tariffs for other freight traffic;
- (ii) UNESCAP's present container routes through Central Asia and Mongolia are focused on PRC and do not yet include South Asia. TRACECA, EurAsEc and CAREC all have rail corridors into Afghanistan which will eventually link up with the large potential markets of South Asia;
- (iii) On a regional basis, a road/railways master plan might be helpful as neither system operates independently from the other. Such a plan would also address linkages with other infrastructure like multimodal and logistics centres. A plan could also examine the comparative advantages of rail and road for freight and, particularly, bulk freight;

²² JAP-2002-04-01: Uzbek Railways (UTY) Assistance with Implementation of Railway Restructuring, 2002

- (iv) For intercontinental rail traffic, it might be important to build on the synchronization of developments between countries which has been started by UNESCAP. That would be enhanced if medium and long term planning operates to the same time frames. Given the different stages of development of rail systems and operations between countries, that would help a timetable to bring each country to the same standards;
- (v) For railways, with their high investment costs, there is likely to be an uneasy relationship between country and sub-regional planning. One country, for example, which had reached its borrowing limits as a result of other priority areas, might cause very costly delays to regional systems development if there were serious limitations on its borrowing because of priorities other than rail. A regional or systems' borrowing facility might be helpful in this respect.

C. Inter Country Agreements

15. ADB has sought to progress one inter-country rail agreement in the form of a project implementation accord. The agreement was on route, funding, and inter-country institutional arrangements on a PRC-Kyrgyzstan-Uzbekistan railway corridor development. An earlier EU study had found a very low EIRR for this route. The proposed route was not part of a CAREC rail corridor (ADB-15)²³. UNESCAP has also been prominent with its draft of an intergovernmental agreement on the Trans-Asian Railway Network

D. Railroad Development

16. There has not been a great deal of donor investment in railroad development in the period 2000-2008. Rail corridors have received the following attention:

- (i) Corridor 1 does not appear to have attracted any donor investment. There are, however, plans for developments:
 - a. On route 1a, there are plans to electrify the sections Aktogay-Dostik (ADB-132)²⁴ and Ala Shankou-Urumqi (ADB-124)²⁵. The two sections are planned for 2009-2011 and 2007-2009 respectively. There remain gaps on sections Kairak-Astana-Mointy-Aktogay in Kazakhstan and Dostik-Ala Shankou across the Kazakhstan/PRC border which do not appear to have received investment attention;
 - b. On route 1b, there are plans to electrify the line Shu-Almaty (ADB-133)²⁶. There do not appear to be plans for the section Zhaisan-Shu in Kazakhstan. There are also plans to construct a line from Zhetygen-Korgas (ADB-127)²⁷ and to construct a line from Khorgos-Yining-Jinghe in PRC (ADB-122)²⁸ which, on the section Sary Ozak-Korgas-Khorgos-Kuylun, follows road corridor 1b but is not part of a rail corridor;
 - c. Route 1c follows the same route as 1a Kairak-Astana-Mointy and continues Mointy-Shu for which there are electrification plans for Almaty-Mointy (ADB-

²³ TA6024REG: Regional Cooperation in Transport Projects in Central Asia, 2002-2006

²⁵ PRC IP6: Electrification of Urumqi-Ala Shankou Line, 2007-2009

²⁶ KAZ IP7: Electrification of Aktogay-Mointy Line, 2009-2011

²⁷ KAZ IP8: Construction of Korgas-Zhetygen Line, 2008-2011

²⁸ PRC IP4: Jinghe-Yining-Khorgas Railway, ?-2009

133)²⁹. There do not appear plans for the section Shu-Merke-Chaldovar across the Kazakhstan/Kyrgyzstan border. In Kyrgyzstan, there are plans to provide track rehabilitation between Chaldovar and Balykchy (ADB-135)³⁰, electrification of the Lugovaya-Bishkek-Balykchy line and provision of the necessary power grid to support the electrification (ADB-147)³¹ which was a priority in ADB's reassessment of its transport strategy for 2003-2005. The plan is for the work to be done between 2015-2017. TRACECA prepared a feasibility study for the Lugovaya-Bishkek-Balykchy line in 2006 (TRAC-18)³²;

- d. The plans for Kazakhstan and PRC are consistent with ESCAP's container block train routes from PRC through Kazakhstan and on to Russia. The World Bank is also reported to be discussing a project which includes railway improvement in Kazakhstan, but details have not been accessed;
- (ii) Corridor 2a has the road/rail link from the Azerbaijan border with Georgia across the Caspian Sea to Aktau in Kazakhstan and then via Beyneu through Uzbekistan to Andijan and Kara Suu on the border with Kyrgyzstan. Corridor 2b is a road route only through Turkmenistan before it links up with 2a at Bokhara in Uzbekistan. In Azerbaijan, the World Bank has recently started a project to upgrade 240km of the east west railroad (WB-19)³³ following an earlier EBRD project to improve the Azeri section of the trans-Caucasian rail link between Baku and Tbilisi (EBRD-12)³⁴. ADB has been active in Uzbekistan supporting the rehabilitation of 341 km of the Samarkand-Bukhara-Khodjadavlet railroad and parts of a second line between Djizzak and Samarkand (ADB-119)³⁵. There remain gaps, however. In Azerbaijan, the whole east west line does not appear to have been electrified. In Kazakhstan, TRACECA has prepared a feasibility study for the Aktau-Beyneu-Kungrad section (TRAC-18)³⁶ leaving the section Kungrad-Nukus-Miskin-Uchkuduk not yet receiving donor attention and the whole section Aktau-Uchkuduk still to attract investment plans. CAREC also has plans to electrify the quadrangle linking Karshi, Bokhara, Navoi and Samarkand (ADB-141, ADB-142)³⁷ and the section Navoi-Uchkuduk (ADB-143)³⁸ which extends the electrification a little less than halfway the distance from Tashkent to the Caspian port at Aktau. There also do not appear to be investment plans for the sections Djizzak-Bekabad-Kara Suu in Uzbekistan and Kashi-Hexi in PRC. Just beyond the end of the rail corridor, but part of the FSU system, TRACECA has prepared a feasibility study for linkages between Andijan in Uzbekistan, and Osh and Jalalabad in Kyrgyzstan (TRAC-18)³⁹;
- (iii) Corridor 3a passes from Aul in Kazakhstan through Saryagash into Uzbekistan and then through Tashkent to Samarkand where it branches to Bokhara and Alat and to Saryasia and Termez on the Afghanistan border. In Kazakhstan, the

³⁹ TRACECA: Review of Railway Rehabilitation in Central Asia, 2004-2006

section Aul-Aktogay does not appear to have been addressed by donor investments or plans for investment. CAREC has plans to electrify the sections Aktogay-Almaty and Almaty-Shu (ADB-131, ADB-133)⁴⁰. The section Shu-Tashkent across the Kazakhstan/Uzbekistan border does not seem to have received donor attention. In Uzbekistan, the line Tashkent-Samarkand has been electrified and the section Samarkand-Bokhara has been described under Corridor 2. Part of the section Samarkand-Termez between Karshi and Tashguzar has been supported by JICA with finance for the rehabilitation of the 31 km line from Karshi to Tashguzar and a new 222 km line from Tashguzar to Kumkurgan (JICA-25)⁴¹. There is also a section across the Uzbekistan/Tajikistan border, Termez-Dushanbe, which does not seem to have been covered by donor investments;

- (iv) Corridor 4b is confined to Mongolia. The Millennium Challenge Account has just started a project, the stated objectives of which included the construction of 150km of track (MIL-1)⁴². Earlier Japan made a small grant of \$7.4 million for rail, but details still need to be collected (JICA-17)⁴³. It might have included improved track, particularly curved, as rails manufactured in Russia had to be replaced every 6 months. Apart from these two projects, there do not appear to have been other donor investments in nor plans for this corridor;
- (v) The only rail section on Corridor 5 is the PRC section between Kashi and Hexi for which there are no plans as discussed under Corridor 2 above;
- (vi) Corridor 6 largely replicates Corridors 1 and 2:
 - a. Corridor 6a starts in Ganyushking, Kazakhstan and passes through Atyrau-Makat-Beyneu where it joins Corridor 2. It follows Corridor 2 to Bokhara in Uzbekistan which has been described under Corridor 2. It then travels Bokhara-Tashguzar which has been described under Corridors 2 and 3a. The section Ganyushking-Beyneu does not seem to have been considered for investment by donors. As mentioned for 2a, TRACECA has prepared a feasibility study for the Aktau-Beyneu-Kungrad section leaving the section Kungrad-Nukus-Misken-Uchkuduk not addressed and the whole section Beyneu-Uchkuduk still to attract investment plans.
 - b. Corridor 6b/6c initially follows Corridor 1a's route from Zhaisan-Shymkent. It then follows Corridor 3a from Shymkent-Tashkent. Neither of these sections appear to have received donor attention. It continues along Corridor 3a Tashkent-Samarkand-Tashguzar-Termez which have been described under 3a.

17. Donor investment support has produced a total of about 984 km. of improved, rehabilitated and new railroad in the period 2000-2008. CAREC members have proposals for approximately 3910 km of improvements, rehabilitation and new railroads and are conducting or have conducted feasibility studies for approximately 2,654 km of railroad⁴⁴. Not all of these proposals are for CAREC rail corridors. They are planned to occur throughout the next decade.

⁴⁰ KAZ IP5: Electrification of Almaty-Aktogay Line, 2009-2011; KAZ IP7: Electrification of Aktogay-Mointy Line, 2009-2011

⁴¹ JICA: Tashguzar-Kumkurgan New Railway Construction Project, 2004

⁴² Millennium Challenge Account: Rail Project, 2007

⁴³ JICA: Railway Transportation Rehabilitation Project, 1993-2000

⁴⁴ A few project proposals do not provide the length of railroad to be improved.

18. There is a number of prospective investments in CAREC's forward plans which are not part of its rail corridors, though they do follow road corridors. In Afghanistan, feasibility studies are planned for 2009-2010 for the routes from Uzbekistan to Herat and the Iranian border, and from the Tajikistan and Uzbekistan borders through Kabul to Pakistan (ADB-129)⁴⁵. A feasibility study is planned for a Tajikistan section Kolkhozabad-Nizhni Pianj to the border with Afghanistan for 2011 (ADB-136)⁴⁶. CAREC is planning a number of feasibility studies in Tajikistan including the electrification of a link from Uzbekistan to Tajikistan and the construct of a rail link from Dushanbe to Kyrgyzstan (ADB-137, ADB-128)⁴⁷. Feasibility studies are also planned for electrifying the line between Tashkent and Angren (ADB-138, ADB-146)⁴⁸.

19. There is no investment planning to modernize telecommunications and signalling systems, nor to address rail safety which is a major feature of CAREC's road planning. There have, however, been some investments in these areas. In telecommunications and signalling systems, TRACECA supplied Azerbaijan with optical cable for communication and signalling (TRAC-15)⁴⁹. A component of ADB's loan to Uzbekistan included financing the provision of fibre optics telecommunications systems (ADB-119)⁵⁰. JICA has also financed the provision of fibre optic cable for the Mongolian system along Corridor 4b (JICA-17)⁵¹. These projects might draw attention to the importance of agreement of CAREC participating countries on governing standards for communications equipment and systems.

E. Locomotives and Rolling Stock

20. There has been some donor support for the supply of locomotives and rolling stock. 50 main line locomotives are to be financed for Azerbaijan (WB-19)⁵². In Uzbekistan, finance has been provided for the purchase of new electric freight locomotives (EBRD-14)⁵³ and the repowering of existing diesel-electric stock (EBRD-17)⁵⁴. In Mongolia, JICA provided finance for the purchase of two locomotives, 30 passenger cars and 455 freight wagons (JICA-17)⁵⁵. CAREC also has plans for the acquisition of 15 new passenger electric locomotives for Uzbekistan in 2009-2010, finance for which is expected to be internally generated (ADB-130)⁵⁶ and for electrically powered freight and passenger locomotives for Kyrgyzstan in the period 2015-2017 (ADB-147)⁵⁷.

21. There are no plans for assistance to Afghanistan, Kazakhstan, Mongolia and Tajikistan to upgrade their locomotive fleets. PRC is also not included in forward plans.

22. With rolling stock, EU-TACIS has funded the purchase of 120 oil tank wagons for Azerbaijan (EU-6)⁵⁸ and JICA, the purchase of passenger cars for Uzbekistan (JICA-24)⁵⁹.

⁵⁸ EU-TACIS: Supply of Oil Tank Wagons to Azerbaijan Railways, 2002

⁵⁹ JICA: Railway Passenger Transport Improvement Project, 1999-2001

CAREC has no current plans for investment assistance for the acquisition of rolling stock. In Mongolia, the Millennium Challenge Account is establishing a separate leasing company to hold all rolling stock (MIL-1) which might be a useful model to restructure parts of railway operations so that they are more amenable to private sector financing and to the operations of the private sector finance arms of IFIs.

23. Little attention has been paid to fleet management other than in Uzbekistan which has received assistance (EBRD-14, EBRD-16, EBRD-18)⁶⁰.

24. Multi modal transport has been studied for the TRACECA region and produced recommendations on harmonisation of standards and operating procedures and interoperability (TRAC-18)⁶¹. Information about the extent to which these recommendations have been adopted by CAREC participating countries would be helpful. If there has been a significant amount of adoption, there would be a case for CAREC supporting their extension to non-TRACECA members.

F. Maintenance

25. There has been some donor support for maintenance activities. Maintenance includes track, locomotives, rolling stock, signalling, communication and other systems and railway stations and goods yards including multi modal facilities. In 1999, Kazakhstan received assistance to improve track maintenance (EBRD-13)⁶² and Uzbekistan to construct a passenger car repair facility and to procure spare parts for it (JICA-24)⁶³. Mongolia received assistance from JICA in the period 1993-2000. There it was established that the existing stock of curved rails had to be replaced every 6 months due to low quality manufacturing standards ((JICA-17)⁶⁴. CAREC has plans to upgrade maintenance facilities in Kyrgyzstan in 2011-2012 (ADB-139)⁶⁵.

26. In maintenance, the question of efficient management of rolling stock, spare parts and inventories might be an issue. Donor procurement practices where the lowest tenderer is usually awarded a contract, can result in a proliferation of different stock and a resulting expansion of the number of spare part items which have to be carried in an inventory. This adds to the costs of operational management and to the requirement for working capital. There might be advantages for CAREC to consider how this question might be addressed effectively without undermining the procurement principles of international donors.

G. Capacity development

27. Railway operators inherited unwieldy management practices, overmanning issues, cultures lacking a commercial orientation and incomplete human resource management policies and systems, as mentioned in the background section. There appear to be numerous opportunities for donor assistance with capacity development.

28. There has been donor activity in commercializing railway operations and making them more efficient. Before 2000, assistance was provided to reduce railway payroll in Kazakhstan and Uzbekistan. In business restructuring, EBRD has provided assistance to Uzbekistan's rail

⁶⁴ JICA: Railway Transportation Rehabilitation Project, 1993-2000

⁶⁵ KGZ IP7: Equipment for Wagon Repair/Maintenance Facility, 2011-2012

corporation (EBRD-19) to separate, divest and privatize non-core activities, consolidate management procedures for annual updating of a Five Year Business Plan, introduce international accounting standards at the consolidated level and to develop its procurement policies, procedures and skills⁶⁶; the World Bank is currently assisting Azerbaijan Railway divide its operations into business centres (WB-19)⁶⁷; and in Mongolia, the Millennium Challenge Account is helping to split operations between a rail authority, Ulaanbaatar Railway Joint Stock Company which will run the services and a leasing company which will own the hardware of the system (rolling stock, track and signalling and communication systems) and lease them to the rail authority (MIL-1)⁶⁸. CAREC has plans to introduce management improvements to Uzbekistan's railway operator, Temir Yullare between 2011 and 2015 (ADB-144)⁶⁹. There is a strong economic, financial and management case for commercializing railway operations to provide an environment in which commercially efficient operations can be expected throughout the system, enabling rail to compete effectively with roads in freight transport, particularly over long distances.

29. There have been 2 interventions to introduce commercial accounting systems to railway operations, in Azerbaijan (WB-19)⁷⁰ and Uzbekistan (ADB-117)⁷¹. The World Bank also designed a project to do the same in Mongolia but that was cancelled (WB-18)⁷². Kazakhstan has received assistance from EBRD to install a management information system (EBRD-13)⁷³.

30. With human resource development (HRD), JICA has provided substantial supervisory and technical training in Uzbekistan (JICA-24)⁷⁴. Operational and management training is being provided by the Millennium Challenge Account project in Mongolia. Training was provided to operate the accounting systems introduced in Azerbaijan and Uzbekistan and TRACECA's optical cable systems in Azerbaijan. The ADB's transport sector strategy includes a requirement for a capacity development and human resource development plan for the sector (ADB-50)⁷⁵ while TRACECA's communications and signalling master plan made recommendations for training (TRAC-17)⁷⁶. Information about the extent to which these recommendations have been adopted and implemented would be helpful.

31. At a regional level, TRACECA has made a substantial investment in training. One project targeted top level decision-makers at Ministries of Transport, Railways, Customs and Port Authorities and, separately, the heads of border and customs stations, ministerial departments, railway departments, port and ferry operators and stakeholders from the road transport industry. A training needs analysis was followed by the development of training material for each of the two groups and the delivery of training programs (TRAC-1)⁷⁷. In a current project, TRACECA is extending its work to training establishments, to ensure that teaching staff are familiarised with latest transport planning techniques and tools, investment appraisal techniques and other methodologies including environmental analysis of transport sector investments. It seeks to improve training through improved pedagogical skills, teaching techniques and curricula development methods. There is a particular focus on multi-modal

transport and interoperability to ensure that training institutes and internal departmental training areas are able to deliver 'state-of-the-art' training in these areas (TRAC-5)⁷⁸. This project is also to produce an appraisal of the potential for establishing a regional training centre for advanced transport training. The establishment of such an institute might be of interest to CAREC in its development of the CAREC Institute.

H. Overlaps and Gaps

32. There are few instances of overlap in CAREC activities in railways. There is a possible overlap in planning in Azerbaijan, where both the ADB and (possibly) EBRD have projects addressing transport policy and in Uzbekistan where ADB and EBRD have both addressed railway plans. There is an overall network plan in UNESCAP's ALTID project with studies of gaps and priorities for development.

33. There are differences in the rail networks proposed by each of the four organisations, CAREC, TRACECA, EurAsEc and UNESCAP which are promoting such networks. That could result in differences in prioritization of investments among participating countries.

34. There are small differences in a few link ups of cross border investments. For example, present proposals for the electrification of the Urumqi-Ala Shankou line are for 2007-2009 and for the Dostyk-Aktogay line in 2009-2011. The two lines are on either side of the PRC/Kazakhstan border on Corridor 1a.

35. There are a number of gaps in modernization/rehabilitation plans for each of CAREC's proposed rail corridors which have been noted in paragraph 16.

36. Maintenance is still to receive substantial support from donors. There is a case for standardizing equipment and rolling stock to minimize maintenance costs and to prepare for the possible situation of international railway companies being interested in running services to and within CAREC countries. There is also a case for standardizing track so that speed limitations and load levels are consistent across the region.

I. Opportunities

37. CAREC has four rail corridors north and north-west from PRC through Kazakhstan to Russia and thence to Europe. One corridor has a spur to Aktobe in Kazakhstan and it then crosses the Caspian Sea and moves westwards into Europe through Azerbaijan without entering into Russia. There is also a corridor from PRC north through Mongolia into Russia. From Afghanistan, there are two routes through Uzbekistan and Tajikistan before joining up with the corridors north and north-west through Kazakhstan. CAREC presently has no rail corridors south through Iran and then west to Europe, though it does have plans to do a feasibility study of a rail link to Herat and thence into Iran. CAREC also is planning a feasibility study for a rail link south to the Pakistan border.

38. For PRC, CAREC currently has only one corridor into Kazakhstan through Ala Shankou and Dostik. There are plans for a second link through Khorgos and Korgas which would provide a direct route to Almaty in Kazakhstan, though this route is not a recognized CAREC rail corridor.

39. In prioritizing rail corridors through Central Asia, there are three important issues. First, the current quantity of freight traffic is light, but the potential might be great once the linkages with PRC have been established. Secondly the costs of modernizing rail systems is high. Thirdly, distances are great which might be an advantage for rail. There might be value for

⁷⁸ TRACECA: Strengthening of Transport Training Capacity in NIS Countries, 2008

CAREC to fund a study of the costs of modernizing each proposed corridor to best practice standards which would include the cost of acquiring the necessary rolling stock and the subsequent cost of operating the corridor. The study would establish the freight levels and tariff levels that would be required to provide any investment with a satisfactory return on the capital invested and an evaluation of how competitive those tariff levels would be with road. The study might also consider the questions of subsidy and the impact of reducing the number of corridors on freight levels. CAREC's proposed REG TA21 might be the vehicle for such a study. There would be value, however, for it to be started before 2011 and its funding to be increased.

40. Such a study might then lead into a second one which would produce a regional railway master plan or a combined road/railway master plan. This study might consider the different stages of development of each country's rail systems and make recommendations about a timetable to synchronize operational and management standards.

41. Given the costs of developing railway networks, there might be a case for prioritizing CAREC's rail corridors and directing investments initially to completely modernizing two alternative routes to Europe, one through Russia and the second through Aktobe and across the Caspian Sea. That would produce alternative routes through different countries which would put competitive pressure on the countries involved in their tariff setting for transit freight. The program might include modernizing rolling stock and upgrading communication, signalling and other systems with a particular emphasis on standardising equipment to minimize maintenance costs. Such an approach would also enable the location of multi modal centres to be prioritized along these corridors and supported by the requisite funding.

42. There is an opportunity for providing assistance to optimize the efficiency of railway operations. There has been some assistance to start the commercialization of railway operations particularly in Azerbaijan, Kazakhstan and Uzbekistan. Prior to commercialization, there might be a case for concentrating some assistance on developing management competencies and practices to encourage commercialization being supported by commercial management practices. Consideration might be given to introducing fast track management development programs to produce a pool of middle and junior managers at operational levels well grounded in commercial practices. Specific rail practices like fleet management might be included in any such development program. Such a program might include secondments to other railway companies and the exchange of management staff. CAREC might consider seeking partnerships with railway operators which might be willing to share their expertise and provide opportunities for operators in CAREC participating countries to gain experience through managed associations with them. Attention might also be given to developing HRM systems to ensure that there is always a sufficient pool of qualified personnel to fill all technical positions. The associations with other railway operators could also be extended to assistance in the development of the training provided by training institutes in CAREC countries, especially those run in-house by railway operators.

43. Rail utilities, because of their commercial orientation, self financing opportunities and control over own revenues and costs, should present acceptable opportunities for the private finance arms of IFIs like the International Finance Corporation of the World Bank and the Private Sector Operations Group (PSOD) of the ADB. Apart from EBRD, they have not been used as a source of financing. There might be an opportunity for CAREC to examine the benefits of restructuring some railway organisations so that the ensuing entities would become more attractive to private sector financing. Importantly, most CAREC rail companies require a major program of locomotive and rolling stock upgrading, especially to improve reliability of locomotives, which lends itself to financing from private sector finance arms.

44. Other opportunities might include systematic support for:
- (i) The development of maintenance systems, upgrading of maintenance repair shops and training of maintenance staff, including management;
 - (ii) improving government policy and regulation to enhance competitiveness;
 - (iii) standardizing equipment requirements to minimize maintenance costs, enhance maintenance capacity and systems and maximize the efficiency of a network;
 - (iv) development of multi-modal and/or logistics facilities at major centres which could serve as a model for the management of logistics centres at other locations;
 - (v) building on the work TRACECA has done in the institutionalization and improvement of training.

J. Projects

Donor		Country	Donors	Project Name	Code/ID	Outputs	Dates	Budget	
								Donors	Country
ADB-15		KGZ, PRC, UZB	ADB	Regional Cooperation in Transport Projects in Central Asia	TA 6024REG	i) facilitate cooperation among the participating countries of PRC, Kyrgyz Republic and Uzbekistan to develop regional transport projects; ii) reach agreement on the route, funding, and inter-country institutional arrangements on the PRC-Kyrgyz Republic-Uzbekistan railway corridor development in the form of a project implementation accord [EU study found a very low EIRR].	2002-2006	0.85	
ADB-29		AZE	ADB	Transport Sector Development Strategy	TA 4582AZE	i) updated transport sector database; ii) identification and prioritization of long-term needs for transport infrastructure and policy, institutional and regulatory reforms; iii) identification of roles of the Government, state-owned enterprises, regulatory bodies, and the private sector; iv) sustainable measures to address sector and thematic issues; v) framework and plans for development of an international logistics center; vi) capacity building of the Ministry of Transport and preparation of a capacity development and human resource development plan for the sector; vii) links developed between transport sector development and the national poverty reduction strategy; viii) a Government-owned Transport Sector Development Strategy for Azerbaijan (2006–2016); ix) provision of computer equipment to various MOT departments to improve their working and efficiency.	2005-2006	0.35	
ADB-32		MON	ADB	Formulating a Transport Strategy (2005-2015)	TA 4471MON	i) undertake an analytical review of the current status of the transport sector and prepare a transport sector update; ii) review the existing master plans for civil aviation, railways, roads, and Ulaanbaatar urban transport; iii) identify the long-term sector challenges and assessing the Government's response to the challenges v) prepare the transport strategy for 2005–2015 including the role of the private sector, based on the transport sector review	2005-2006	0.30

ESCAP-17		KAZ, MON, PRC	UNESCAP	Container transport demonstration project in the northern corridor of the Trans-Asian Railway	ROK97569	In the field of railway, an important feasibility study was completed in 1996 on the Trans-Asian Railway Northern Corridor, namely the "Feasibility study on connecting the rail networks of China, Kazakhstan, Mongolia, the Russian Federation and the Korean Peninsula ". This study showed the great potential of the Trans-Asian Railway Northern Corridor to provide efficient rail movements between Asia and Europe. The study (i) defined a network of routes making up the TAR Northern Corridor (TAR-NC), (ii) stipulated routes requirements in terms of technical indicators (loading gauge and axle-load) and commercial indicators (minimum average speed), (iii) dealt with operational aspects including tariff issues, and (iv) stressed the importance of cross-border traffic facilitation measures. The study was followed by a related Policy Level Expert Group Meeting which convened in Bangkok in October 1995 to study the findings and recommendations. Given the conclusions drawn in the study, a follow-up demonstration project,	2001	0.16

						"Development of Asia-Europe Container Transport through Block Trains -Phase I" was II requested and endorsed by the participating countries. This project is aimed at providing the policy makers and planning officials of the participating countries to determine the tasks that need to be implemented in order to develop the services attractive to shippers.			
ESCAP-18		KAZ, MON, PRC	UNESCAP	Container demonstration project in the northern corridor of the Trans-Asian Railway (Phase II) (00/TCTID-Z/011/ROK-6)	ROK00796	The Trans-Asian Railway Northern Corridor has the potential to offer landbridge container movements between North-East Asia and Europe, thereby offering to some shippers an alternative to maritime transport while allowing the railways concerned to develop profit-generating services. However, a number of institutional and technical bottlenecks exist along the routes in the corridor. An important set of activities under the project is to identify these bottlenecks and discuss with the countries concerned ways of removing them: i. identify physical and non-physical barriers to efficient international train operation on all routes in the corridor and to the development of long-standing commercially attractive services. ii. map out the necessary tasks to be accomplished before efficient operation and railway standing services matching customers' expectations can be developed. iii. define the institutional frameworks, which are crucial to ensure smooth international movements of goods between Asia and Europe, and also between the various economically developing areas located along the corridor.	2001-2002	0.06	
ESCAP-19		KAZ, MON, PRC	UNESCAP	Container transport demonstration project in the northern corridor of the Trans-Asian Railway (Phase II)	ROK01871	At a policy-level expert group meeting, the participating countries agreed that the demonstration runs of container block-trains will provide useful analysis of the strengths and weaknesses of the railways along the routes in the Trans-Asian Railway Northern Corridor and will assist them in developing efficient services for the movement of containers between Asia and Europe. Project activities are guided by a Memorandum of Understanding among the countries concerned and articulated on a series of Steering Committee Meetings and a number of demonstration runs of container block-trains along the routes in the corridor. Two Steering Committee Meetings have already been organized and have provided a forum to discuss issues of common interest relating to project implementation.	2001-2006	0.08

						Meanwhile, two demonstration runs (from the port of Tianjin to Ulaanbaatar, and from the port of Lianyungang to Almaty) have already been implemented along key segments of the corridor providing insights on the physical and non-physical bottlenecks impeding efficient cross border movements by rail. Two more runs are scheduled to take place (from the Russian port of Vostochny to Berlin or Warsaw, and from Brest to Ulaanbaatar). The findings of these four initial demonstration runs will be presented at a third Steering Committee Meeting scheduled to take place in China in September 2004.			
ESCAP-20		AZE, KAZ, KGZ, MON, PRC, TAJ, UZB	UNESCAP	Development of an intergovernmental agreement on the Trans-Asian Railway Network	ROK04001	Undertake a comprehensive technical assessment on the current status of the Trans-Asian Railway (TAR) network, with particular emphasis on the through-movement of containerized freight traffic along TAR corridors, and draft an Intergovernmental Agreement on the Trans-Asian Railway Network through a consultative process with active involvement of all relevant stakeholders.	2004-2007	0.15	
ESCAP-21		AFG, AZE, KAZ, KGZ, MON, PRC, TAJ, UZB	UNESCAP	Identifying investment needs and development priorities for the Trans-Asian Railway network	ROK07002	The project aims to achieve one of the expected accomplishment of the Transport and Tourism Subprogramme, i.e. “more effective policies and programmes by governments to enhance transport logistics” by (i) providing, transport policy planners and railway managers in member countries, with subregional overviews of investment needs and priorities for the development of the Trans-Asian Railway network and (ii) facilitating dialogue among member countries, as well as between member countries and international financial institutions. As a step toward the goal of establishing a regional intermodal transport network, a review of the development priorities in a subregional and regional context will help member governments agree on priority projects, make efforts at achieving greater synchronization in their implementation, allocate resources and acquire greater leverage to approach international financial institutions for assistance.	2007	0.05

¹ The report examines assistance since 2000.

A. Background

1. Land routes from Europe to Central Asian Republics (CAR), South Asia and People's Republic of China (PRC) have three broad alternatives: through Russia, through Iran or through Azerbaijan which requires a crossing of the Caspian Sea. There are two ports on the eastern board of the Caspian: Aktau in Kazakhstan and Turkmenbashi in Turkmenistan and one major port on the western side, Baku. Alyat is an alternative port just south of Baku. It is regarded as a port to develop to counteract the physical constraints of Baku.

2. The three Caspian ports are treated as terminuses in TRACECA's transport routes. They are also part of the east/west road and rail route to and from PRC and South Asia. The ports are nodes on CAREC's road and rail corridors 2a and 2b from Baku to Afghanistan and PRC on a rail/road corridor through Aktau, Kazakhstan and Bukhara, Uzbekistan and on a road corridor through Turkmenbashi, Turkmenistan and Bukhara.

3. The routes across the Caspian have figured prominently in the planning of the European Commission, predominantly implemented through TRACECA. They have figured less prominently in CAREC planning, where roads have been the major focus.

4. Ports in the land locked Caspian Sea are major multi-modal points on transport routes, requiring transshipment from and to road or rail at departure and arrival.

B. Planning

5. There have been two levels of planning directed at maritime routes: transport master plans and individual port plans. The ADB funded a transport master plan for Azerbaijan in 2005 (ADB-29) which included identifying the long-term development needs, policy reforms, and regulatory requirements for maritime transport and ports to form part of a medium-term transport sector development strategy for 2006-2016. (Has there been a similar planning exercise for Kazakhstan?)

6. TRACECA funded the preparation of a master plan for Aktau Port in 2007 (TRAC-9). The plan is for port development up to 2020 and included a feasibility study for the extension of the port to the south after the northern extension had been completed. It also included the preparation of a corporate plan for the port operators, Aktau International Maritime Trade Port. CAREC, in its forward plans, has proposed a feasibility study for a new international port at Alyat (ADB-31). Has there been a master planning exercise for Baku Port comparing a situation with development of Alyat and no development of Alyat?)

7. There is a planned TRACECA project: Motorways of the Sea for the Black Sea and the Caspian Sea (TRAC-11) which appears to be an extension of the 2001 eponymous European program. That program set out to introduce new 'intermodal maritime-based logistics chains in Europe' to produce more sustainable and more efficient transport solutions for short distance journeys than road-only transport. The planned project has a requirement to produce short and medium term action programs. It appears to address many of the gaps indicated in the previous two paragraphs. CAREC is proposing a Needs Assessment of Caspian Shipping along CAREC Corridors for 2010, which is designed to produce a development master plan (ADB-102). There seems to be the potential for overlap between this proposed project and TRACECA's "Motorways of the Sea".

C. Port Development

8. Donor funding for port facilities has been limited in the period 2000-2008. TRACECA funded the rehabilitation of the rail ferry terminal in Aktau, renovating marine works, berthing and ferry ramps in 2001 (TRAC-6). There is a CAREC proposal for the Japan Bank for

International Cooperation (JBIC) to provide partial finance for the construction of oil berths, dry cargo terminals, a breakwater and a naval jetty for Aktau (JBIC-5). There appears to have been no donor funding of port developments at Baku since an EBRD project during 1997-1999.

9. TRACECA has also upgraded navigational systems at the ports of Baku and Aktau. Equipment included radar surveillance equipment, Global Maritime Distress Safety Systems and meteorological equipment. Lighthouses, beacons and leading lights in navigational areas were also replaced (TRAC-7).

D. Vessels

10. Donor funding for vessels has been limited. A 2003 TRACECA project provided support to Aktau Port for tendering for the leasing of one or two tugboats (TRAC-8). There is also a CAREC proposal to lever private sector funding to purchase 5 new ferries of 56 wagon capacity and 2 RO/ROs for Azerbaijan (ADB-35).

E. Maintenance

11. There appears to have been no donor support for maintenance of port facilities, equipment or vessels.

F. Capacity development

12. Capacity development has predominantly been focused on training, though TRACECA, as part of its Aktau Port Development project, developed improved corporate structures and a corporate plan for the port authority as a preliminary to commercializing the authority (TRAC-9).

13. TRACECA in 2005 funded a major project to strengthen the capacity of maritime academies serving the Black and Caspian Seas, particularly to ensure that training was consistent with the requirements of the International Maritime Organization. A major part of the work was the development of curricula and training courses followed by the training of lecturers, instructors and trainers (TRAC-10). TRACECA is planning a project which focuses on developing training modules to enhance the security of ports, two targets of which are border guards and customs officers (TRAC-12). All TRACECA training programs start with a diagnostic survey leading to a training needs analysis.

14. TRACECA has also targeted port and ferry operators as well as training institutes to improve both human resource training and its delivery. It based its work on training needs assessments for both the top level decision-makers of the Ministries of Transport, Railways, Customs and Port Authorities and the heads of border and customs stations, ministerial departments, railway departments, port and ferry operators and stakeholders from the road transport industry. This analysis was followed by the development of training material for each of the two groups and the delivery of training programs (TRAC-1). In a current project, TRACECA is extending its work to training establishments, to ensure that teaching staff are familiarised with latest transport planning techniques and tools, investment appraisal techniques and tools including environmental analysis of transport sector investments (TRAC-5). This project also sets out to improve training through improved pedagogical skills, teaching techniques and curricula development methods. There is to be a particular focus on multi-modal transport and interoperability to ensure that departments are able to deliver 'state-of-the-art' training in these areas². This project also will produce an in-depth appraisal for the

² TRACECA: Capacity Development for Senior Transport Officials, 2003-2005; TRACECA: Strengthening of Transport Training Capacity in NIS Countries, 2008

establishment of a regional training centre for advanced transport training. The establishment of such an institute might be of interest to CAREC in its development of the CAREC Institute and in extending this work to the non-TRACECA membership of CAREC.

15. In 2005, ADB's Transport Sector Development Strategy in Azerbaijan set out to prepare a capacity development and human resource development plan for the transport sector. Information would be valuable about the degree this plan has been adopted and acted on.

G. Opportunities

16. Caspian ports with underdeveloped roll on/roll off facilities could represent major bottlenecks for transport providers, particularly international road and rail users. Opportunities include:

- (i) a situational analysis of the trans-Caspian transport system to identify development opportunities;
- (ii) Coordinated study and potential support for port and fleet operating company organisations, systems development (particularly ICT), maintenance systems, logistics facilities and fleet development.

¹ The report examines assistance since 2000.

A. Background

1. Air routes are different from land based transport corridors. They are, however, an integral part of a country's transport network, both domestically and internationally. International routes are just beginning to be developed for many CAREC countries. The traditional routes to Russia and neighbouring countries continue much as they were pre-independence. Within the CAREC region, international traffic tends to be between major cities with little between smaller centres. Internally, national routes are important given the long distances between urban complexes within a country or, as for example with Tajikistan, the extreme difficulty of surface travel given the terrain that has to be passed through. Systems and equipment still significantly reflect the inheritance that each country received after the break up of the former Soviet Union (FSU) and require development. In 2000, many airports in the region needed to improve their infrastructure (navigational lighting, markings, minima according to AIP etc) and required new, internationally recognized procedures (EBRD-25)². As with other transport sub-sectors, maintenance was underfunded resulting in relative neglect of much of the infrastructure and some equipment.

2. In the case of Afghanistan, it is likely that information on assistance is more incomplete than for other CAREC participating countries. The US government has probably made a number of interventions in the aviation sub-sector, details of which still have not entered the public arena.

B. Planning

3. There have been a number of transport plans prepared for individual countries in the CAREC region. This report lacks information about the degree to which the plans submitted for civil aviation have been adopted by the governments concerned. There is no overall civil aviation plan for the region. CAREC is planning one, to take place between 2010-2012 (ADB-114)³. This intervention is expected to produce a targeted action plan for each country to improve the overall performance of the sub-sector, to address existing deficiencies in critical areas to ensure safe operations and to enable a country's aviation sector to cope with growing demands for air transport. CAREC is presently conducting a study of transport networks which is expected to produce a transport strategy (ADB-50)⁴. In part, this study might cover some of the same ground as the planned aviation study. CAREC also has a number of other proposals for assistance in civil aviation in its pipeline which are planned to be implemented before the civil aviation study. There might be a case for advancing the date of the latter so that other planned projects have a good fit with the civil aviation plan.

4. There are a number of plans which address civil aviation within a country:

- (i) In Afghanistan, there were three studies which addressed civil aviation. The World Bank conducted a Transport Sector Review in 2003 to develop an institutional and policy framework for the sector. It had an emphasis on privatisation specifying that airports would be managed by a number of airport companies. The operations of companies would be self-financing. Their development need not be. Air navigation systems would be operated by a corporate entity which would charge for its services and generate sufficient

² Southern Ring Air Routes Phase II, Airline Questionnaire Analysis, 2000

³ REG TA24: Needs Assessment of Central Asian Civil Aviation

⁴ TA6347REG: Central Asia Regional Economic Cooperation: Transport Sector Strategy Study, 2006

revenue to cover operating and fixed costs⁵. At much the same time, the World Bank also helped prepare an overall vision and strategic plan for the transport sector, consistent with its policy framework (WB-4)⁶. The ADB has also prepared a civil aviation master plan to provide the framework and a time-bound action plan for sustainable and effective development of the civil aviation sector (ADB-60)⁷;

- (ii) In Azerbaijan, the ADB conducted a transport sector review which included civil aviation. The review was to produce a medium-term (2006–2016) transport sector development strategy, covering the roles of Government, private sector, and regulatory bodies⁸. EBRD also has a transport policy review on its agenda. It has a project to develop and implement a national sustainable transport policy, with a focus, where appropriate, on further approximation of legislative and regulatory frameworks with European and international standards. In particular, they would address safety and security of all transport modes. An aspect of the planning concerns the development of cooperation in satellite navigation (including joint research actions and applications) (EBRD-21)⁹;
- (iii) In Kyrgyzstan, the ADB has recently embarked on the preparation of a transport master plan for the period 2010–2025. The plan will develop long-term investment programs in civil aviation (ADB-76)¹⁰;
- (iv) In Mongolia, the ADB has prepared a transport strategy (2005–2015). The civil aviation strategy was based on a review of the existing civil aviation master plan¹¹. In its technical cooperation program, EBRD notes participation in the preparation of a civil aviation master plan (EBRD-36)¹²;
- (v) In Tajikistan, the ADB is currently preparing a transport master plan based on earlier studies by EBRD and the World Bank. The plan will identify priority directions for each subsector to improve policy and regulations, increase outputs and efficiency, and propose an investment program (ADB-49)¹³;
- (vi) In Uzbekistan, a recently completed ADB intervention was to produce short-term (2006–2010), medium-term (2011–2015), and long-term (2016–2020) transport sector development plans and a sector road map. The plans included civil aviation (ADB-46)¹⁴.

5. There does not appear to be donor funding for Kazakhstan and Xinjiang and Inner Mongolia Provinces of PRC to produce transport master plans or a civil aviation plan.

C. Airport Development

6. There has not been extensive donor investment in airport development nor in development of other aspects of civil aviation operations in the CAREC region since 2000. Donor activity directed at developing international airports located in capital cities has been supported by JICA and JBIC. They have provided funding for the construction of a new international terminal at Kabul airport (JICA-6)¹⁵, a number of developments at Manas International Airport, Kyrgyzstan and a new airport at Ulaan Baatar (JBIC-7)¹⁶. There has been development of airport infrastructure in centres other than capital cities. ADB provided Afghanistan with a loan to rehabilitate airports at Bamian, Chagcharan, Faizabad, Farah, Meymaneh, Qala-i-Naw and Zaranj (ADB-104)¹⁷. USAID has funded the upgrading of Lashkar Gah Bost airport (USAID-6)¹⁸. JICA upgraded Samarkand, Bokhara and Urgench airports in Uzbekistan so that they would meet international standards (JICA-23)¹⁹. EBRD rehabilitated the main runway and provided associated investments to improve operations at Atyrau airport, Kazakhstan in 2001 (EBRD-29)²⁰.

7. CAREC has plans for the development of civil aviation centres. There are plans to upgrade Shymkent, Semey and Kokchetau airports in Kazakhstan (ADB-110), though Semey and Kokchetau have been dropped for lack of financing; to rehabilitate Osh International Airport in Kyrgyzstan (ADB-116); to rehabilitate Olgiy and Hovd airports in Mongolia (ADB-109); to upgrade the international airports in Urumqi and Kashi in Xinjiang Province (ADB-107); and to prepare a feasibility study for upgrading Bokhara Airport in Uzbekistan (ADB-113)²¹. IDB is also planning to expand and upgrade Issykul Airport in Kyrgyzstan in 2010 (IDB-31)²².

8. Donors have also provided assistance with equipment. JICA funded an unspecified amount of equipment for Kabul Airport (JICA-7)²³. The World Bank has provided navigation, communications and various other equipment, including maintenance equipment, for Kabul Airport and communications equipment for 15 domestic airports in Afghanistan (WB-4)²⁴. JBIC provided air traffic control equipment and air navigation equipment for Samarkand, Bokhara and Urgench airports (JICA-23) and EBRD replaced air navigation equipment in Tajikistan (EBRD-30)²⁵. CAREC's forward plans also include navigation equipment for 7 domestic airports in Afghanistan (ADB-108), for Ulaan Baatar, Olgiy and Hovd airports in Mongolia (ADB-109) and for airports in Kyrgyzstan including Osh Airport (ADB-112, ADB-116)²⁶.

D. Aircraft

9. Only one project set out to provide funds for the purchase or lease of aircraft. EBRD proposed that it would provide funds to Tajikistan State Air Company (TSA) to lease two western aircraft (EBRD-33)²⁷ in 2005. This project, however, was cancelled in 2007.

E. Maintenance

10. There appears to have been little donor funding for maintenance activities in the civil aviation sub-sector. ADB has prepared an implementation program to strengthen the institutional capacity of the Ministry of Civil Aviation and Tourism in Afghanistan to operate and maintain all rehabilitated airports (ADB-60)²⁸.

F. Capacity development

11. Capacity development has received attention from donors. Much of it has been directed at government agencies with less attention directed at air operations. ADB has undertaken capacity development in the Ministry of Transport in Azerbaijan (ADB-29)²⁹ and plans a similar intervention for Afghanistan (ADB-108)³⁰. ADB has also provided assistance to Afghanistan to address civil aviation legislative and enabling environment weaknesses and to develop improved systems and procedures including financial management systems, human resource management and operational manuals (ADB-103)³¹. CAREC has a proposal to develop a new set of air navigation procedures to comply with new air code and international standards for Kyrgyzstan (ADB-112)³². TRACECA is currently supporting a project to improve aviation safety, security and environment management systems to develop the necessary regulatory frameworks, technical and institutional conditions, regional management and monitoring systems in line with the standards of EU/EASA (European Aviation Safety Agency) and ICAO (International Civil Aviation Organisation) (TRAC-14)³³. EBRD provided assistance to Kazakhstan's Ministry of Transport and Communications to improve the legal and regulatory environment of air transport in Kazakhstan (EBRD-29)³⁴. USAID has assisted in improving the airport management system in Dushanbe (USAID-7)³⁵.

12. There have been two projects assisting a national airline improve its organizational and operational structures. EBRD provided assistance to Mongolia's Mongolyn Irgenii Agaaryn Teever (MIAT) airline to restructure and to position itself for privatization (EBRD-35)³⁶, and to Tajikistan State Air (TSA) to restructure itself initially into three business units (air transport services, airport services and air navigation services) (EBRD-27) as well as an aviation sector restructuring study (EBRD-30)³⁷.

13. There have been three interventions directed at improving financial management and management information systems. In addition to ADB's support for financial management systems in Afghanistan, mentioned in paragraph 11 above, EBRD has provided assistance to

³⁶ The project is mentioned in EBRD's country strategy.

³⁷ AUS-2000-02-02: Aviation Sector Restructuring Study, 2000; 15857: TSA Air Navigation Systems, 2001

the company managing Atyrau airport in Kazakhstan to improve its financial management (EBRD-29)³⁸ and to TSA to improve its cost accounting and management information systems (EBRD-30)³⁹.

14. Many projects provided training in project implementation. Additionally, in Afghanistan, ADB has assisted in strengthening the training capacity of the Civil Aviation Training Center in areas such as airport management, airport inspection, airport maintenance, airport engineering, airside operations and management, flight safety, and aviation security (ADB-104)⁴⁰. CAREC has a proposal for a project in Kyrgyzstan to train ATC controllers, which already appears to be being provided by the TRACECA training project described in the next paragraph (ADB-112)⁴¹.

15. More specifically, technical training to ATC control staff in 'southern ring states' (which exclude Afghanistan, PRC and Mongolia) has recently been provided by TRACECA to bring their performance up to international standards. Sustainability of the training programs has been addressed by focusing on developing the institutional capacity of National Civil Aviation training institutions and other institutions responsible for aviation safety (TRAC-13)⁴². This training appears to be being supplemented by TRACECA's Civil Aviation Safety and Security project which will strengthen the technical skills of personnel in safety, security and environmental management (TRAC-14)⁴³. Technical training across the region is also proposed by CAREC directed at aviation safety officials. It would be based on a training needs analysis and would provide an understanding of the law governing air safety and international standards and training in technical aspects of applying them (ADB-111)⁴⁴.

G. Potential Overlaps

16. There are potential overlaps in the following areas:

- (i) CAREC is currently conducting a transport strategy study and proposes a study which will produce a targeted action plan for each CAREC country to enhance the capacity of each country's aviation sector to cope with growing demands for air transport;
- (ii) In Afghanistan, both the ADB and World Bank produced strategic documents planning the future of civil aviation there;
- (iii) In Azerbaijan, both the ADB and (possibly) EBRD have projects addressing transport policy;
- (iv) In Mongolia, the ADB has prepared a civil aviation strategy and EBRD might be assisting with an updated civil aviation master plan;
- (v) In Uzbekistan, JICA upgraded Bokhara Airport between 1996 and 2003. The United Arab Emirates are planning to finance a further upgrade;
- (vi) TRACECA has provided technical training to ATC staff across the region through upgrading the capacity of National Civil Aviation training institutes. CAREC has plans to provide training to ATC controllers in Kyrgyzstan.

H. Opportunities

17. Air traffic is international. To participate, a country and an airline must manage their operations according to international rules and standards, particularly IATA's, which means that international standards must be recognized and met. Despite this harmonization, there is only one regional project in the period 2000-2008, TRACECA's recent training of ATC staff. CAREC members are at different stages of development of their civil aviation systems and these differences might be augmented by the country focus of donor interventions (for example TRACECA's work does not include Afghanistan, Mongolia and PRC. Only three CAREC countries received assistance in installing financial accounting and management information systems). Consequently, a study of the differential stages of development of various systems (legislative, policy, operational) linked to market prospects might assist in developing programs to help participating countries develop their systems to meet international standards sustainably. This could be accomplished by CAREC's planned civil aviation master plan.

18. Important opportunities might include systematic support for:

- (i) airport operations and maintenance systems, including aspects like passenger management and airport and flight safety;
- (ii) improving government policy and regulation to enhance competitiveness;
- (iii) developing international regional routes between smaller centres, one aspect of which is small business development of the 'carry trade';
- (iv) capacity development of airline and airport operating company organisations, systems (particularly management and financial information systems), human resource management to ensure there is always a sufficient pool of qualified people to fill all technical positions;
- (v) standardizing equipment requirements to minimize maintenance costs and enhance maintenance capacity and systems;
- (vi) development of logistics facilities at airports which could serve as a model for the management of logistics centres at other locations.

¹ The report examines assistance since 2000.

A. Background

1. Trade facilitation seeks to minimize the costs of moving freight and people internationally while ensuring that taxes are collected and security is maintained. A significant area of cost in the movement of goods is time. Time is consumed in two general areas: moving from one border crossing to the next, and passing through a border crossing. Associated with the costs and time taken passing through a border crossing are the time and cost to obtain the necessary permits to enable a person or a vehicle to continue his, her or its journey. From the perspective of the countries managing the roads and border points, there is an important balance between expediting freight and people and ensuring that illegal goods do not enter into the country and dutiable goods are processed appropriately. Of concern also is that vehicles have regard to the engineering standards of the roads available and, particularly, do not exceed permitted axle loadings.

2. Customs authorities have a major role in trade facilitation. Sometimes the movement of goods has to be negotiated before their release by customs and officials of other agencies. That takes time and often has hidden costs. Customs and tariff regulations can leave issues to the discretion of customs officers and officers of other agencies which contribute to uncertainty about the costs of importing or exporting goods and an environment in which rules can be bent to expedite clearance.

3. Important to trade facilitation is the idea of multimodal and intermodal transport. The idea is that goods are transported 'seamlessly' from one mode of transport to another. Intermodality is particularly important with containerization. Consequently, there is a need for intermodal transport sites which are able to move containers efficiently between road, rail and maritime freight carriers. Provision for such sites is clearly important for cost effective transport solutions and to maintain competition between different transport systems. Associated with the idea of multimodal and intermodal transport is the idea of a logistics centre which provides a centre for freight suppliers to provide them with all the amenities they require to carry out their businesses. Such centres usually include locations for government departments like customs and quarantine services where international freight is cleared. They sometimes include multimodal and intermodal nodes where transshipment can occur from one kind of freight carrier to another. International airports usually have such a centre attached to them. Logistics centres are often developed on the basis of PPP with governments providing the site and private organisations being responsible for developing the site, reticulating services and leasing out office space, the warehouses and other amenities which are built on the site.

4. Central to effective trade facilitation is harmonization of a country's rules and regulations regarding trade with a number of international agreements. There are a number of international conventions which apply to trade, the most important of which is that of the World Trade Organisation (WTO), membership of which is dependent on a country aligning its international and domestic trade policies and laws with WTO rules. All but three of the CAREC participating countries have not yet gained accession to WTO. Consequently, a major focus of activity has been to assist countries gain access and, for those that have gained access, to continue to adapt their enabling environments to meet their obligations under WTO rules.

B. Planning

5. CAREC has developed a transport and trade facilitation strategy. It focuses on three strategic areas:

- (i) Establishing competitive transport corridors across the regions. This strategic area primarily relates to the rail, road and maritime corridors discussed in other sections. Significant funds are still required to complete these corridors;
- (ii) Facilitating movements of people and goods across borders. This strategic area is the subject of this section. There are five areas which are to be addressed in CAREC programs:
 - a. Operationally effective border crossing facilities;
 - b. Simplified and standardized cross-border procedures and documentation;
 - c. Use of shared electronic information in control and inspection;
 - d. Competent and effective staff;
 - e. Elimination of high transaction costs.

These areas are facilitated if there is agreement between neighbouring countries about documentation and procedures and there is mutual confidence in the capacity of officials so that duplicated activities can be eliminated;

- (iii) Developing safe, people friendly transport systems. That requires a customer responsive culture, which often takes a significant amount of time to introduce into a uniformed service.

6. Other than CAREC's recent transport sector strategy study, the transport master plans, discussed in previous sections concentrated on the physical aspects of transport systems. Consideration of trade facilitation issues, if addressed, tended to examine areas which also had physical requirements like logistics centres and multimodal and intermodal services. These plans generally did not address improving the environment for trade facilitation. Consequently, at the planning and policy levels, there remain opportunities to develop improved trade facilitation environments with a country's immediate neighbours.

7. Three ADB regional TAs have addressed the question of trade facilitation. One was a reassessment of ADB's transport and trade facilitation strategy. It had a focus on developing an infrastructure investment program. Nevertheless, it was also required to identify existing and emerging regional transport issues including "soft infrastructure" issues like policy, institutional, administrative, and procedural impediments to efficient and effective transport, transit and trade within the region. The reassessment produced only two trade facilitation priorities for immediate action: the construction of three multimodal terminals and concluding a tripartite cross border agreement between PRC, Kyrgyzstan and Uzbekistan (ADB-14)².

8. This work was followed by a TA which was predominantly focused on providing appropriate organisational forms to encourage dialogue. It also conducted analytical studies on regional cooperation (ADB-36)³.

² TA 6044REG: Reassessment of the Regional Transport Sector Strategy, 2002; and Jenkins, Ian, and Paul Pezant, **Central Asia: Reassessment of the Regional Transport Sector Strategy - Draft Strategy**, 2003

³ TA6199: Greater Silk Road Initiative 2005, 2005-2008

9. CAREC's recent transport sector strategy study was required to examine a number of issues including cross-border facilities, arrangements, and logistics; policies, legislation, and regulations on cross-border transport; institutional and human resource capacity for cross-border transport; status of PPPs in regional transport; and national transport sector strategies or master plans in CAREC countries from a regional perspective⁴.

10. These studies had no requirement to examine organizational cultures which are so important to CAREC's third strategic priority of people friendly transport systems.

C. WTO Accession

11. Of CAREC participating countries, Kyrgyzstan has been a WTO member since 1998, Mongolia since 1997 and PRC since 2001. All other participating countries are now in the process of accession. Of them, Uzbekistan started its process in 1994. This was followed by Kazakhstan in 1996, Azerbaijan in 1997, Tajikistan in 2001 and, most recently, Afghanistan in 2004. Progress is consistent with when working parties were established. Uzbekistan is the most advanced. It has already conducted bilateral market access negotiations with interested members on the basis of initial offers in goods and services, which were circulated in September 2005.

12. WTO establishes legislative and regulatory requirements which set a level of minimum standards which a country has to meet for accession. All countries have received donor assistance, but that assistance has not been evenly applied. For example, Kyrgyzstan continues to receive assistance to improve a number of aspects of its trade management. Mongolia, in contrast, does not appear to receive significant levels of assistance:

- (i) Afghanistan does not appear to have received substantial donor assistance. It is, however, unlikely that it would have had the capacity to take the first steps without some assistance. USAID has just started a project which will support Afghanistan's accession (USAID-37)⁵;
- (ii) Azerbaijan's application might have been stalled for a period as a recent USAID project set out to "jump start" its WTO application. The USAID project focuses on developing legislative and regulatory frameworks, possibly within the framework of a strategic plan to gain accession (USAID-33)⁶. EBRD also might have had a presence in Azerbaijan, reviewing the Customs Code and generally improving legislation (EBRD-39)⁷;
- (iii) Kazakhstan has received and is receiving a considerable amount of assistance on its preparation for WTO accession. There must have been an accession strategy in place, which the World Bank has assessed (WB-25)⁸. UNDP has assisted Kazakh officials to elaborate strategy and tactics for conducting bilateral/multilateral negotiations in the WTO accession process and supported them with training (UNDP-1)⁹. EU-TACIS has provided assistance with the harmonization of legislation, particularly harmonizing legislation on technical regulation and standardization with the WTO Agreement on Technical Barriers to Trade, and with the corresponding EU legislation. The EU has also supported the

Ministry of Industry and Trade and the Centre of Trade Policy Development in their work on WTO accession and provided support on the most effective implementation of measures in accordance with WTO requirements (EU-38, EU-14)¹⁰. The EU recently reviewed customs-related legal and regulatory frameworks (EU-40)¹¹. USAID has had two successive programs in CARs to assist with WTO accession which addressed each CAR individually (USAID8-31, USAID34-37)¹². In Kazakhstan, the first program supported the drafting of a law On Technical Regulations (a law which EU-TACIS also addressed in its assistance) to meet the requirements of the Technical Barriers to Trade (TBT) and Sanitary and Phytosanitary Measures (SPS) Agreements. It also produced information about WTO accession through a public affairs' program to educate the private sector on issues of international trade and the impact of WTO accession. The second program is focusing on achieving customs code conformity with the Revised Kyoto Convention, on phytosanitary issues and on developing regulations and enforcement procedures to achieve full compliance with Trade Related Aspects of Intellectual Property Rights (TRIPS). Intellectual property rights and valuation were also the focus of WTO working group experts in the country in 2006¹³. DFID has also provided accession assistance.

- (iv) In Kyrgyzstan, USAID has produced a Unified List of Permits for Business Activity which has been adopted and amendments to the Law On Licensing. The World Bank is providing assistance with implementation of the Law on the Fundamentals of Technical Regulation and in developing it in critical sectors (WB-28)¹⁴;
- (v) In Tajikistan, USAID has assisted with the preparation of the Memorandum on the Foreign Trade Regime and has concentrated on identifying the legislation which will require amendment for the Tajik government's preparation of a WTO Legislative Compliance Action Plan. It has assisted with the drafting and review of the laws and regulations required to implement the Action Plan resulting in the enactment of Customs and Tax Codes, and laws on Inventions, Industrial Designs, Standardization, Accreditation, Metrology, Technical Regulations and on Licensing of Separate Types of Activity. The World Bank has provided sector assessments of trade and trade-related policy reforms required for WTO accession (WB-33)¹⁵. Training has been addressed by the Swiss Secrétariat d'Etat à l'Économie (SECO) which provided funding to the United Nations Institute of Training and Research (SECO-5)¹⁶. USAID has also funded training directed at customs and trade officials in aspects of the WTO agreements that are most important for facilitating trade;
- (vi) In Uzbekistan, USAID has assisted in the preparation of draft laws "On Technical Regulations" and "On Conformity Assessment" and made recommendations on

¹⁶ SECO: from a secondary source

amendments to a variety of laws and other legal acts to bring them into compliance with the TRIPS Agreement, including the Civil Code, Criminal Code, Administrative Code, Economic Code, Copyright Law, Patent Law and Trademark Law. UNDP has provided support for accession negotiations by providing required information and studies (UNDP-6)¹⁷. GTZ is currently providing support with the preparation of a Transit Law and the implementation of a new Law on Technical Regulation (GTZ-8)¹⁸;

- (vii) Information is sparse about donor assistance to Mongolia to move its enabling environment in line with WTO requirements.

13. Appropriate legislative and regulatory frameworks are a critical area of change to gain WTO admission. Compliant customs codes are high on the list especially for signatories of the Revised Kyoto Convention. Customs procedures and practices can also be a major obstacle to efficient trade movement. UNDP has assisted Azerbaijan to upgrade customs legislation and supporting regulations and procedures together with support for capacity development (CD) of the customs service with a particular emphasis on the States Customs Committee (UNDP-18, UNDP-19)¹⁹. USAID's Trade Facilitation and Investment and Regional Trade Liberalization and Customs Projects have led the way in Kazakhstan, Kyrgyzstan and Tajikistan on revising customs codes and, presently, helping Kazakhstan to move its customs code into conformity with the Revised Kyoto Convention. In Kyrgyzstan, ADB has worked with USAID to simplify the Customs Code and revise implementing regulations on customs issues (ADB-152)²⁰. USAID was joined by ADB in Kyrgyzstan and Tajikistan and the two agencies worked together collaboratively. The World Bank is implementing a project in Kazakhstan which is to comprehensively review legislation leading to rationalization of all import, export, and transit procedures and documentation across government agencies. It will align the Customs Code and secondary legislation with major international instruments and best practice. In a separate intervention in Tajikistan, the World Bank is also helping to revise the Customs Code (WB-29)²¹. UNDP is assisting Uzbekistan with "methodological assistance" to the working group in drafting a revised Customs Code. There was also an ADB RETA which was intended to simplify customs codes in the region, but might have addressed other priorities when it was confronted with the work being done on customs' codes (ADB-155)²². The EU has also been active in Kazakhstan and Kyrgyzstan in this area but precise information is unavailable. EurAsEC has also been active. One of EurAsEc's goals is to "converge and harmonize national legislation", one aspect of which is customs codes. Precise information on EurAsEc's activities remain to be collected.

14. Afghanistan does not seem to have benefited from assistance in developing a compliant Customs Code.

15. CD, particularly training on a regional basis, has been a major feature of assistance. ADB has financed "intensive" courses on the WTO TRIPS agreement (work on TRIPS also has been done by USAID in Kazakhstan and Uzbekistan), the simplification and harmonization of customs' procedures, and bringing regulations into line with the WTO Customs Valuation

Agreement, investment, anti-dumping, rules of origin and various aspects of the implementation of the Agreement on Trade Facilitation. UNDP conducted training and a workshop on WTO Accession in 2002, Japan has conducted courses on WTO accession and ADB, UN Special Programme for the Economies of Central Asia (SPECA) and UNECE have provided technical assistance on WTO accession. Additionally, ADB has provided training for senior negotiators in high level meetings just as UNDP had earlier done in Kazakhstan. Most of this training was directed at specific groups of officers in government agencies.

D. Policy

16. Policy precedes legislation and improved regulatory frameworks. CAREC countries inherited little capacity in policy development when they became independent, being at the delivery end of a command economy directed from Moscow. Harmonized policies on transport development and trade facilitation are important steps in improving the trade environment. Legislation and regulatory frameworks would then follow to provide the enabling environment for implementing the policies. EU-TACIS, UNDP and TRACECA have been the main players in policy development on a regional basis. EU-TACIS supported the development of rational, transparent fee and tariff scales across the TRACECA region and TRACECA has just completed a project to establish principles for national transport policies coordinated at the regional level and to develop short, medium and long term action programs for legislative action (EU-22)²³. UNDP, through Shanghai Cooperation Organization's (SCO) working groups on trade, transport and transit, helped to produce a series of policy analysis and policy recommendation papers (including an in-depth report on status, bottlenecks and recommendations on issues like the Transit Transport Framework Agreement (TTFA)/Transit Trade Agreements (TTA) status) leading to a draft action plan on these issues for dissemination and endorsement by SCO and national governments (UNDP-4)²⁴.

17. There have been individual initiatives at a country level. They have the advantage of only having to get agreement by one country to be adopted. They run the risk of having policy developed which is contrary to that being developed elsewhere. There might be opportunities for CAREC to provide assistance to coordinate policy development across the region.

18. In participating countries:

- (i) ADB supported a trade policy review in Mongolia which was to produce recommendations to enhance the country's institutional capacity to develop a sound trade policy and legal framework (ADB-149)²⁵;
- (ii) UNDP supported policy research and recommendations on facilitation of foreign trade and foreign investments in Uzbekistan (UNDP-6)²⁶;
- (iii) EU-TACIS has provided assistance on the development of a law on combined transport in Kazakhstan and on establishing a coherent trade strategy linked with the overall development plan of Afghanistan (EU-19, EU-11)²⁷;

²³ EU-TACIS: Unified policy on transit fees and tariffs, 2001-2003; EUROPEAID/122076/C/SER/Multi: Development of Coordinated Transport Policies, 2007-2008

²⁷ EU-TACIS: Support to the Development of a Transit Corridors Policy in the Republic of Kazakhstan, 2000-2002; EU: Needs Assessment of Trade and Trade Related Assistance, 2005

- (iv) USAID is about to embark on a project which will develop trade policy in Afghanistan (USAID-37)²⁸.

19. There appears to be an opportunity for CAREC to provide assistance with the development of a more comprehensive program on policy development in transport and trade facilitation for the CAREC region with support in CD of policy development experts.

E. Legislation

20. A key advantage of the requirements for WTO accession is that they lay down a set of principles and agreed standards which must be attained for accession. The approach of first seeking agreement on principles before addressing detail seems to be one which is adopted by TRACECA. Such an approach was followed in the project noted in paragraph 16 above where legislative action was to follow agreement on principles on national transport policies. TRACECA was also active in establishing a common legal basis for transit transportation. It started with an enunciation of principles following multilateral agreements and international conventions. That led to the drafting of a model multimodal transit law as a basis for legislative action by TRACECA members (TRAC-24)²⁹. Information about what legislative action has resulted would be helpful.

21. In individual countries, in addition to the support for WTO succession, there has been assistance at the country level towards legislative change in a number of discrete areas:

- (i) In Afghanistan, the World Bank has provided assistance in developing a Law on Freight Forwarding (WB-24)³⁰ and ADB in drafting a Domestic Transport Law and in amending or developing laws, rules, and regulations for the operation of the new/improved cross-border infrastructure being constructed in the country (ADB-167, ADB-157)³¹;
- (ii) In Kazakhstan, USAID has supported the development of draft laws on private entrepreneurship and procurement (USAID-11)³². EU-TACIS conducted a review of customs related legislation (EU-40, EU-19)³³ and provided assistance on laws on transit and combined transport.

22. UNESCAP has worked with SCO to develop subregional legal regimes for facilitation of international land transport (ESCAP-27) and an agreement to adopt the United Nations Customs Convention on the International Transport of Goods under Cover of TIR Carnets (TIR Convention) for Customs management of transit transport (ESCAP-29, ESCAP-30)³⁴.

23. The EU's Border Management Programme for Central Asia (BOMCA) has been active in CARs and their common borders with Afghanistan. BOMCA's focus is on border management

and it has supported new legislation and/or regulation on border management in line with EU best practice working through an interagency working group (BOMCA-5)³⁵.

F. Enabling environments

24. Much of the work already described on legislative change in the areas of transport and trade facilitation do not appear to have resulted in donor assistance to implement the provisions effectively with the principal exception of the Customs Codes. There has been a lot of donor assistance to customs departments. USAID's two sub-regional projects in Kazakhstan, Kyrgyzstan and Tajikistan followed up the legislative work on Customs Codes with assistance in their implementation and enforcement and in simplifying regulations and instructions. In Kyrgyzstan, the World Bank has also assisted in the area to develop a work plan for implementation of a Law on the Fundamentals of Technical Regulation. One priority for the work was to develop technical regulations in critical sectors with a high contribution to GDP such as agro-business and food processing.

25. An interesting approach was taken by the USAID Trade Facilitation and Investment Project in Kyrgyzstan to support the enforcement of regulations in the revised legislation. It used the Office of the General Prosecutor, which has the potential to be a kind of Ombudsman's Office with teeth, to identify illegal and improper agency actions. This has resulted in a number of repealed regulations and challenged actions including illegal road checkpoints; mandatory government collections for public funds; excessive documentation required for trade transactions; supernumerary inspection bodies; officially promulgated revenue targets from inspection; illegally restrictive permits; and illegal requisitioning of private assets for government use.

G. Customs and Border Crossing Posts

26. A lot of donor attention has been directed at border management. Excluding assistance to customs' departments, the major player in the CARs is the US with programs run by USAID, Justice Department, military, State Department and an EXBS program (export border control and security). Within border management, much attention and government priority has been given to border posts in terms of facilities, equipment and procedures. Less attention has been given to operationalizing them. Customs departments are a major player in border crossing posts (BCP) as that is where a significant amount of their routine is performed. There are also other agencies which operate in BCPs including border guards, immigration personnel, quarantine services and other agencies with an interest in the passage of people, goods and freight. If poorly managed, the combination of numerous agencies at BCPs produces significant obstacles to the efficient passage of people and goods. EurAsEc has a policy of only having border guards and customs officials at BCPs with other agencies being located away from a border. Information would be helpful about the degree to which this policy has been adopted by EurAsEc members.

27. Much donor attention has been directed at border guards. Customs' operations have also benefited from the support for border guards. There has been a major infrastructure building program. Physical facilities do contribute to the efficiency or inefficiency of operations at border crossings. One of the obstacles to efficient border crossing processes has been that agencies are located in different buildings and each has to process some documentation necessary for freight to proceed through a crossing. The design of BCPs, is therefore important, because it can contribute significantly to operational efficiency. No reference has been made to

³⁵ 45524: BOMCA4, nd

a standard design for facilities at various kinds of crossing in donor project documentation. BOMCA works to at least one 'interagency' design. It, for example, has constructed facilities at three international BCPs on the Tajik-Afghan border in the Gorno-Badakhshan Autonomous Oblast which include fully equipped joint working buildings and amenities for all agencies responsible for border management.

28. If one includes the border post on the Almaty/Bishkek road, which is not on a CAREC corridor, there are 28 border posts on CAREC corridors. With CAREC corridors, less attention has been paid to rail BCPs than to road. International airports should not be neglected as border posts.

1. Facilities

29. There has been much activity directed at border post infrastructure. For example, the US military has established 100 border posts along Afghanistan's border with Pakistan. Systematic attention does not appear to have been directed at the border posts along CAREC corridors. The majority of BCPs have yet to be improved. There are also marked distinctions between countries. In Kazakhstan, on CAREC corridors, only the BCP on the road between Almaty and Bishkek has had infrastructure improvements funded by donors. In Afghanistan, all the major BCPs with Pakistan, Iran, Turkmenistan, Uzbekistan and Tajikistan have had funding for infrastructure and equipment from CAREC members. Some Afghanistan BCPs have had attention from more than one donor. Hairatan, Torkham and Shirkhan Bandar, for example, have had at least two projects develop infrastructure there. The World Bank's 2004 Emergency Customs Modernization and Trade Facilitation Project improved and developed physical infrastructure (including equipment) at all three BCPs (WB-24). The European Union's 2007 Support to Customs Administration in Afghanistan set out to build and maintain the necessary border crossing post infrastructure at Hairatan and its North and North-eastern Afghanistan - Integrated Border Management Program finalized the Torkham crossing and constructed a BCP at Shirkhan Bandar (EU-13, EU-12)³⁶. The UNDP has a program to develop border crossings between Tajikistan and Afghanistan with infrastructure shared between the 'border force' and local communities (UNDP-12)³⁷.

30. BOMCA has invested heavily in border posts in CARs. It concentrates on the activities of border guards, while extending assistance to customs operations where there is synergy. BOMCA's activities might raise an interesting point for CAREC. Its concentration on border guards, sometimes supported by the US military, might introduce disparities in the working conditions, competencies, support like training institutes and equipment between border guards, who are peripheral to trade facilitation, and customs which is central. Discrepancies in working conditions can have negative impacts on the organizational cultures of those which suffer by comparison and can prove difficult to address.

31. For CAREC road BCPs, the situation appears to be:

- (i) in Afghanistan, border posts have been constructed at Hairatan, Torkham and Shirkhan Bandar as mentioned above. USAID has also had a project expanding and rehabilitating customs posts (USAID-38)³⁸;

³⁶ P083906: Emergency Customs Modernization and Trade Facilitation Project, 2004; DCI-ASIE/2007/019068: Support to Customs Administration in Afghanistan, 2007-2011; NA-IBM: North and North-eastern Afghanistan - Integrated Border Management Program, 2006

³⁷ UNDP: Safe Borders Through Enabled Border Communities, nd

³⁸ USAID: Improve Economic Policy and the Business Environment, nd

- (ii) in Azerbaijan, ADB has constructed a BCP at the Red Bridge crossing with Georgia on Corridor 2 which provides for customs and border guards. In a concurrent TA, it also designed a border post for Astara which is not on a CAREC corridor (ADB-37, ADB-30)³⁹. No attention has apparently been paid to the port crossings from Baku to Aktobe and Turkmenbashi;
- (iii) in Kazakhstan, BOMCA has completed construction works at the rail BCP at Merke on Corridor 1c and ADB at the Akzhol-Chu BCP on the Almaty-Bishkek road. BOMCA also has plans to construct a BCP at Daut-ota, which might be on the Kazak/Uzbek border on Corridors 2a and 6a. Kazakhstan has 9 other BCPs on CAREC road corridors. USAID has supported the drafting of an initial agreement between Kazakhstan and Russia on the establishment of joint border arrangements at key border crossings and established joint border commissions at Aktobe/Orenburg, Uralsk and Petropavlovsk based on Customs Consultative Councils (USAID-8)⁴⁰;
- (iv) Kyrgyzstan has 5 BCPs on CAREC corridors, including the Bishkek-Almaty road crossing with Kazakhstan. Both Kyrgyzstan and Tajikistan started systematically with a project to develop a strategy and an investment plan for border infrastructure development and a loan requirement for both countries to develop a comprehensive plan for construction and installation of border infrastructure (ADB-150, ADB-152)⁴¹. Publication of the strategy might provide useful information for other donors interested in this area of support. As a result of the strategy, about 10 border posts in the Kyrgyz Republic and 50 in Tajikistan are to be rehabilitated and constructed in a current project, but which ones have not yet been agreed (ADB-165)⁴². Karamik, on the Corridors 3b and 5 Kyrgyzstan/Tajikistan border is likely to be one and the two borders between Kyrgyzstan and PRC at Irkeshtan on Corridors 2 and 5 and Torugart on Corridor 1c are likely to be two others (ADB-74, ADB-76)⁴³;
- (v) Tajikistan has 3 BCPs on CAREC corridors. In addition to Karamik, the one with Uzbekistan at Pakhtaabad/Saryasia on Corridor 3b, should be one of the posts addressed in ADB's Regional Customs Modernization and Infrastructure Development Project (ADB-186)⁴⁴. The third one at Nizhny Pianj on corridors 5 and 6c border with Afghanistan has been addressed by the US Army Corps which constructed customs buildings, inspection bays and check points by the bridge it had constructed across the Syr Darya river (USG-2)⁴⁵;
- (vi) Uzbekistan has 6 BCPs on CAREC corridors. Only that with Afghanistan at Termez on Corridors 3a, 6a and b appears to have been rehabilitated, with the possibility that BOMCA is addressing Daut-ota, which might be on Corridors 2a and 6a;

³⁹ L 2205AZE, L 2206AZE, AZ0023: East West Highway Improvement, 2005-2009; TA 4684AZE: Preparing the Southern Road Corridor Improvement Project Alyat-Astara, 2005-2006

⁴¹ TA 6058REG: Trade Facilitation and Customs Cooperation, 2002-2007, L 1926KGZ, L 1927TAJ, TA 3951TAJ: Regional Trade Facilitation and Customs Cooperation Program, 2002-2005

⁴² L 2113REG: Regional Customs Modernization and Infrastructure Development Project, 2005-2010;

⁴³ G 0084KGZ: CAREC Regional Road Corridor Improvement Project, 2008-2013; G 0123KGZ: CAREC Transport Corridor 1 (Bishkek-Torugart Road) Project, 2008-2014

⁴⁴ REG IP5: Customs Modernization and Infrastructure Development II, 2009

⁴⁵ US Army Corps: Nizhny Pyandzh Bridge and Border Facilities, 2007

- (vii) There appears to have been little attention to the BCPs between Mongolia and Russia and PRC, though Zamyn Uud has received attention from ADB as a multimodal transit point;
- (viii) Plans seem to be fairly well advanced in planning for border posts, especially by the US, BOMCA and IOM. For BCPs, there appears still to be significant investment opportunities in Kazakhstan, Mongolia and at almost all rail BCPs. In its forward planning, CAREC has four proposed projects which address the physical development of border posts for the period 2009-2017 (ADB-206, ADB-192, ADB-186, ADB-190)⁴⁶. If border crossings are a major constraint to the easy flow of trade, improving facilities to facilitate processes might warrant being considered a high priority, especially as efficient buildings and equipment encourage efficient processes on the part of officialdom.

2. Equipment

32. There might be an opportunity for CAREC to support the setting of a standardized set of equipment for different levels of BCP and across agencies working in border security. BOMCA appears to have a standardized set for border guards as it is working to a 'framework' and operating within an integrated border management framework. Equipment includes scanning equipment, communications equipment (Georgia, for example, with a BCP with Azerbaijan, has taken its first steps towards the standardization of communication systems of agencies operating in border control⁴⁷) and ICT equipment to enable a number of different kinds of transaction to be processed quickly and for information to be passed to other agencies with responsibilities for aspects of border control both in the country concerned and in neighbouring countries. Standardization might be as important for information flows as for maintenance efficiency.

33. There appear to be opportunities for improving coordination of the provision of equipment to bring all players, including the US military, under the same practical umbrella. The US military has installed a number of communication links within CARs, including Kyrgyzstan. Equipment has also been provided by a number of donors. EurAsEc is currently preparing a comprehensive plan for BCPs using 'high tech' equipment to expedite the movement of containers across borders. In the case of Kyrgyzstan and Tajikistan, ADB has developed a comprehensive plan for BCPs which includes basic search and examination equipment in them and processing points (ADB-152)⁴⁸. On CAREC corridors, ADB has financed the supply of equipment for:

- (i) inspection of vehicles and passengers at Red Bridge between Azerbaijan and Georgia (ADB-37);
- (ii) customs operations and control equipment at Torugart between Kyrgyzstan and PRC (ADB-165);
- (iii) an automated system for customs clearance at the Akzhol-Chu border point between Kyrgyzstan and Kazakhstan (ADB-4);

⁴⁶ REG IP1: Border Crossing Point Infrastructure and Investment, 2010-2017; REG IP3: Border Post Improvements and Joint Border Processing, 2009-2017; REG IP5: Customs Modernization and Infrastructure Development II, 2009; REG TA3: Facility and Process Improvements at Border Crossing Points, 2009-2015

⁴⁷ <http://se2.dcaf.ch/serviceengine/FileContent?serviceID=21&fileid=F9F44700-03F3-1FFE-D5AD-16231E12B310&lng=en>

⁴⁸ L 1926KGZ, L 1927TAJ, TA 3951TAJ: Regional Trade Facilitation and Customs Cooperation Program, 2002-2005

- (iv) a communications network connecting customs headquarters, regional offices, and priority customs border posts with associated protocol for communications operations, an upgraded capacity of the existing area network to facilitate data-sharing and communication between agencies, and customs administrations of other countries, and mobile inspection platform, X-ray machines, detectors and patrol vehicles at border posts in Kyrgyzstan and Tajikistan (ADB-165);
- (v) equipment, such as X-ray machines and surveillance equipment at selected BCPs in Mongolia which includes Zamyn-Uud, the border town with PRC (ADB-171)⁴⁹.

34. TRACECA has supplied computers and telecommunications equipment at selected BCPs in Kazakhstan, Kyrgyzstan, Tajikistan and Uzbekistan (TRAC-20)⁵⁰, a fact which was taken into account in ADB project designs. The EU has supplied drug control and search and scanning equipment for Kyrgyzstan and Tajikistan. The US Army Corps has provided 'state of the art' scanning equipment at the Tajikistan/Afghanistan BCP at Nizhny Pyandzh (USG-2)⁵¹. IOM has provided equipment for BCPs and BOMCA has supplied phyto-sanitary equipment to the Ministry of Agriculture for use in BCPs in southern Kazakhstan (IOM-2, BOMCA-1)⁵². The US Government has provided equipment for anti-smuggling, control of weapons, and radioactive substances in Kyrgyzstan and other CARs. SECO had earmarked \$3-5 million for computerization of customs in Kyrgyzstan (SECO-2)⁵³.

35. BOMCA has supplied equipment to border guards and customs at Tashkent and Bukhara international airports and ICT and office equipment at the railway BCP at Merke on the Kazakhstan/Kyrgyzstan border (BOMCA-4).

36. It is not possible to determine the degree to which equipment supply is being provided within a framework of an overall systematic plan. BOMCA, in association with UNDP is leading the program of developing border posts and integrated border management. ADB seems to have taken the greatest interest in developing customs departments with USAID another prominent player. The US government and World Bank are prominent in developing border guards and customs services in Afghanistan. Other agencies, like departments of health and agriculture appear to be relatively neglected. PRC has received little donor attention, though it seems to have similar levels of concern about border security, especially along the Xinjiang border. There might be advantages in bringing together all these threads. CAREC in its forward plans, is proposing two projects, one to improve technology and the second to determine needs for and invest in weighing, inspection and scanning, and material handling equipment, warehouses, inspection yards, cross-docking facilities, and ICT systems (ADB-206, ADB-192)⁵⁴. A systematic inventory of what equipment each BCP needs would be helpful to standardize requirements. Both projects are planned for the period 2009-2017. In the absence of an equipment plan, the later they occur, the greater the risk that individual items will be procured which might prove incompatible with the technological solutions later provided.

H. Integrated Border Management and Strengthening Customs Departments

37. Integrated border management (IBM) relates to the organization of all border agency activities in order to facilitate the movement of permitted persons and goods while maintaining secure borders and observing national legal requirements. It requires agencies working in border management to reach a certain level of capacity so that all are able to work together efficiently to achieve an effective level of border management. Customs administrations are usually the agency of choice to lead the development of integrated processes and procedures because of their responsibility for processing goods at a point of entry which requires them also to deal with the people carrying the goods. Border police and immigration personnel focus primarily on people. As a consequence, in many countries, customs services have become responsible for both goods and people at points of entry. In CAREC countries, the drive for IBM has focused on border forces, with BOMCA being prominent. IBM is the framework guiding BOMCA. BOMCA has prepared an IBM Handbook for Central Asia which is being applied by CAR governments (BOMCA-9)⁵⁵. BOMCA pays particular attention to the development of national strategies for border management. Kyrgyzstan has produced one. BOMCA is running this strategy program in every CAR except Tajikistan, which is being supported by OSCE. IOM is working in the south of Azerbaijan where it is seeking to establish a replicable IBM system at the southern border (IOM-1)⁵⁶. There might be an important role for CAREC to play in the development of IBM, especially to assist customs services to develop the capacity to take a leadership role in developing and implementing national strategies in border management.

38. An IBM program across a region benefits from a data base recording the regulations, procedures and other issues relevant to processing freight across border crossings in each of the countries in a region and making it available to the public. As part of an agreement with BOMCA, UNDP has created a border management and security data base in Central Asia to assist coordination. The data base currently provides a set of country linkages to what BOMCA is doing in that country.

39. Capacity development (CD) features prominently in the work of BOMCA. Senior border and customs commanders have been familiarized with concepts and practices of European IBM and local border guard and customs trainers trained in IBM methodologies under BOMCA5. A number of workshops have been held in CARs, usually attended by officials engaged in customs, border, phytosanitary, sanitary-epidemiological, and veterinary controls. USAID is also working to improve customs procedures in Kazakhstan, Kyrgyzstan and Tajikistan through pilot testing joint customs control between Kazakhstan and Kyrgyzstan and between Tajikistan and Afghanistan (USAID-35)⁵⁷. GTZ has just begun supporting the dissemination to other CARs of Kazakh experience in IBM through a series of seminars (GTZ-2)⁵⁸. EBRD developed a comprehensive education and training strategy on border management for Azerbaijan, including improved understanding of Schengen rules and standards (EBRD-40)⁵⁹.

40. CAREC members have provided a variety of support to the capacity development of customs departments in Kazakhstan, Kyrgyzstan, Mongolia and Tajikistan:

- (i) In Azerbaijan, EBRD has assisted in enhancing the efficiency of Azerbaijan police, state border service and customs officers through the provision of modern

⁵⁹ http://www.delaze.ec.europa.eu/pdfs/enp/EU_Azerbaijan_AP.pdf

equipment, adequate infrastructure, facilities and training in order to increase their effectiveness at border crossing checkpoints (EBRD-40)⁶⁰;

- (ii) In Kazakhstan, the World Bank has a project following the World Custom Organization's capacity building methodology and framework. It is high tech. It provides a systematic approach to improving capacity across a service. It includes the development of an HRM strategy to improve service conditions and culture and an HRD strategy to develop staff competencies (which EU/TACIS had also touched on in 2006 (EU-40)⁶¹. Eurocustoms also helped develop modern HRM policies and procedures [EuroC-5]⁶²), the establishment of a Customs Academy to institutionalize training (in its earlier project, EU/TACIS had enhanced the training capacity and methods of the Customs Control Committee (CCC) Training Centre), development of a management information system including HRM, process engineering and risk management, all within a comprehensive change management and continuous improvement strategy. The project also seeks to strengthen interaction and collaboration within customs, and between customs and other border control agencies both within Kazakhstan and with neighboring countries, and with regional and international institutions. The project has a focus on developing procedures to streamline and integrate border control activities into a "single window" and applying one-stop principles through the establishment of a unified information database shared by regulating authorities (WB-29)⁶³;
- (iii) In Kyrgyzstan and Tajikistan, the ADB has supported a succession of projects which have differed in emphasis from that of the World Bank in Kazakhstan. The first project had a focus on headquarters' operations and HRM. It included the development of a procedural and instruction manual with revised customs clearance and control procedures. A data base was to be established which included risk profiling and communication protocols for exchange of customs and trade data and information among CAREC participating countries. The development of the data base in Kyrgyzstan has not been smooth and might impinge on the development of other IBM processes across agencies in the country. Completion of the system is important to GTZ's current project to introduce integrated and joint border control procedures at pilot check points in Kyrgyzstan to reduce the number of goods inspections, different procedures and other tasks and minimize process times (GTZ-3, GTZ-5)⁶⁴. In Tajikistan, the focus of the project has been on headquarters and HRM. It included the development of an operations manual to meet ISO9000 standards to institutionalize performance indicators and service standards (ADB-152)⁶⁵. The second project has a strong emphasis on ICT systems and, like the World Bank project in Kazakhstan, addresses a management information system including HRM and financial systems supported by a communications network. There is a strong focus on BCP facilities and operations. The communications network would already have had equipment on the ground from the TRACECA project which

⁶⁵ L 1926KGZ, L 1927TAJ, TA 3951TAJ: Regional Trade Facilitation and Customs Cooperation Program, 2002-2005

provided telecommunications and computer terminals to BCPs (TRAC-20)⁶⁶. The ADB project supports the establishment of cooperative partnerships between border inspection agencies and traders to simplify procedures and management of border-post facilities. Business process re-engineering is addressed through technical assistance to ensure customs practices and procedures are in line with the Revised Kyoto Convention and World Customs Organization agreements (ADB-165, ADB-163)⁶⁷.

There are other donors working in capacity development in Kyrgyzstan and Tajikistan. The World Bank provided a grant to purchase computers and servers for headquarters in Kyrgyzstan⁶⁸. In HRM, Eurocustoms is providing support for improving the recruitment system for customs officers in Kyrgyzstan⁶⁹;

- (iv) In Mongolia, the ADB is providing assistance to upgrade the Mongolian GAMAS system [Mongolian Customs Automated Data Processing System which had replaced an earlier ASYCUDA system] to provide an electronic processing environment supporting internet-enabled and Windows-based systems and to introduce a one-stop service for customs clearances and improve inter-agency coordination (ADB-171)⁷⁰.

41. In Afghanistan, ADB has provided technical assistance to harmonize customs procedures with neighbours, to improve inter-agency coordination and, in HRM, to reduce the opportunities for corruption (ADB-167)⁷¹. The World Bank provided assistance for improvements to communications systems, automated data systems and management information systems (WB-24)⁷². It supported UNCTAD to install ASYCUDA to improve data collection, documentation trails, tariff handling and risk management. The system has been operationalized at Hairatan on Corridors 3b and 6a.

42. On a regional basis, ADB had a project to modernize data management including data sharing and development of a regional framework for a risk management system. It also set out to develop master plans for the capacity development of customs departments with measures such as reengineering of customs business practices, change management, training of staff, and consultation with private sector stakeholders (ADB-155)⁷³. TRACECA produced recommendations on border crossing procedures as they relate to railways and, separately, recommendations concerning the documents that are currently used in freight forwarding activities and addressing the improvement of restrictive practices in each of the TRACECA countries (TRAC-18, TRAC-27)⁷⁴. SECO is planning to install an automated system, the Customs Data Program to modernize administrative customs clearance procedures. It also is planning to assist anti-corruption efforts (SECO-7)⁷⁵. It might be helpful to develop some kind of data base to monitor which recommendations and proposed actions from regional studies are

⁷⁵ Reported in EU's Central Asia Indicative Program 2007-2010

adopted by which countries and provide it to all CAREC members. It might provide useful material to coordinate some activities.

1. Agreements

43. A number of projects have been concerned with effecting agreements:

- (i) ADB, in collaboration with UNESCAP, set out to establish an intergovernmental agreement of SCO member states on the facilitation of an International Road Transport Agreement (ADB-156, ESCAP-29)⁷⁶;
- (ii) USAID supported the drafting of an initial agreement between Kazakhstan and Russia on the establishment of joint border arrangements at key border crossings (USAID-8)⁷⁷;
- (iii) The ADB is providing support for a cross-border agreement between Kyrgyzstan, PRC, and Tajikistan on facilitating border crossing formalities, cross-border movement of people and goods, requirements for admitting road vehicles and other issues (ADB-73, ADB-74)⁷⁸. In a separate project, ADB provided assistance to implement bilateral transit agreements between Kazakhstan, Kyrgyzstan, and Tajikistan (ADB-155)⁷⁹. ADB has also set out to establish a cross-border agreement between Kazakhstan and Kyrgyzstan on harmonized vehicle weights and dimensions and customs documentation at the Chu crossing point (ADB-3)⁸⁰;
- (iv) ADB has supported Mongolia in developing a transit traffic framework agreement with PRC and Russia (ADB-24)⁸¹.

44. TRACECA has negotiated a number of agreements, starting with its Basic Multilateral Agreement. It recently negotiated an agreement on the development of multimodal transport⁸². TRACECA agreements might present an opportunity for CAREC to consider their extension to non-TRACECA countries participating in CAREC.

2. Process Efficiency

a. Licensing

45. The number of licenses a business requires to be able to operate in a CAREC participating country has received attention. In Kazakhstan, USAID set out to reduce the number of activities subject to licensing (246 broad categories of activities were covered) and eliminated a large number. In Kyrgyzstan, it has assisted in drafting amendments to the Law "On Licensing" which will streamline the licensing process. Similarly, in Tajikistan, it has supported the enactment of a Law on Licensing of Separate Types of Activity which has established a single set of procedures for the issuance, suspension and revocation of licenses

(USAID-13)⁸³. TRACECA is currently providing assistance to CARs to develop licensing systems for transport operators of perishable goods in the frame of the Agreement on the Transport of Perishable Foodstuffs (ATP Agreement) (TRAC-28)⁸⁴.

b. Single Window and Single Administrative Document

46. A single window is a concept usually dependent on one agency satisfying other agencies that it is able to distribute all required information submitted by an importer or exporter and coordinate all agency responses effectively to the trader. Alternatively, a trader will submit an e-declaration to all concerned agencies for processing and approval. Submission and responses are all done electronically between the trader's computer and agency computers. Both approaches assume that processes have reached a reasonable level of efficiency and that risk management systems are in place. The latter approach also assumes that robust ICT systems are in place, that they are compatible and officials are competent to use them. Both approaches rely on competent, professional agencies able to use the systems and apply processes and procedures efficiently. Consequently, the individual work done in improving systems, processes, procedures and staff competencies in various customs departments, which is the most likely agency to take on a lead role, is important for establishing the conditions to introduce a single window.

47. A single administrative document ideally contains all the information each agency requires to process the import or export of goods. The efficiency of a single window is increased where a single administrative document is also in place. For such a document to be feasible, the requirements of each agency for information need to be kept to a minimum. In the context of this, UNDP is assembling all the forms and documents used in Kyrgyzstan for international trade together with information on the documentary procedures and the legislative acts governing the documents. It intends to develop them into an electronic format and enter them into a forms repository as a pilot project that can be implemented in other Central Asian countries (UNDP-10)⁸⁵.

48. GTZ has a major program supporting the introduction of a single window in CARs. Other donors, particularly USAID and ADB, have an interest in the issue and have parts of projects addressing it. GTZ has an informal relationship with USAID and ADB, obtaining support from them in areas where it considers that they have a comparative advantage. The relationships currently work well. Such relationships are dependent on the goodwill of each donor and some flexibility in the application of funds when there is a need for a contribution to address some issue. UNECE has also been providing workshops on UN/CEFACT Recommendation 33 (the Single Window) supported by training in all CAREC participating countries other than PRC (UNECE-2)⁸⁶.

49. The drive for a single window in CARs is operating separately from the work on re-engineering departmental processes and systems and raising the competencies of staff, pre-conditions which would seem to be necessary if a single window is to work effectively. As already noted, ADB has been working for much of this decade in Kyrgyzstan and Tajikistan, the World Bank has just started a major organisational reform project in Kazakhstan while donor support for Uzbekistan does not appear great. For the efficient flow of goods across international

⁸⁶ http://www.unece.org/cefact/cf_plenary/plenary08/ece_trd_c_cf_08_21E.pdf

land borders, there would be advantages in having similar standards operational across the region. There might be scope for CAREC to develop an overall idea and agreement on those standards and benchmark their achievement.

50. There have been a number of discrete donor activities on a single window:

- (i) In Afghanistan, USAID is embarking on a project in Afghanistan which seeks to develop a single window for import/exports (USAID-37)⁸⁷;
- (ii) In Kazakhstan, the ADB proposed a single window for the Almaty/Bishkek crossing which has been considered by the respective parliaments (ADB-3)⁸⁸. Currently, the World Bank is developing procedures to streamline and integrate border control activities based on “single window” and one-stop principles through the establishment of a unified information database shared by all agencies (WB-29)⁸⁹. GTZ is supporting a single window pilot project based on existing Centres of People Services (GTZ-2)⁹⁰ and USAID is also supporting the development of a single window (USAID-35)⁹¹. There is an opportunity, if ADB’s earlier work is to bear fruit, to locate a pilot project at the Chu crossing between Kazakhstan and Kyrgyzstan, which, if effective, could prove a model for elsewhere given the high volume of traffic passing through the BCP;
- (iii) In Kyrgyzstan, the ADB has had a succession of projects directed at improving performance in the Customs Department. Much of it has been directed at establishing an ICT system, which has proven to be a complex task. Its early work on having the concept of a single window presented to parliament was followed by GTZ setting out to develop a one stop shop for import/export documentation based on a single administrative document submitted at a customs control checkpoint, details of which were entered into a single automated integrated database shared by all concerned agencies (GTZ-3)⁹². GTZ is following up this project with one which will implement a single window system. Part of the work will be to promote the idea of a single window for pre-customs procedures as part of an integrated system, which will be dependent on Kyrgyz Customs Department making headway with the design and installation of an effective ICT system. That system needs to be compatible with those in other concerned agencies (GTZ-5)⁹³. USAID is also working in this area, providing support to the single window working group and assisting with the development and introduction of a single window and single administrative document.
- (iv) In Mongolia, USAID and ADB have been active in promoting the concept of a single window and one stop shop. USAID has assisted in the preparation of a national program to establish a single electronic window for trade facilitation (USAID-32)⁹⁴. ADB later set out to implement one-stop services for customs

⁹⁴ USAID: Economic Policy Reform and Competitiveness Project, 2003-2008

clearances which would lay the foundation for inter-agency coordination (ADB-171)⁹⁵.

- (v) In Tajikistan, GTZ is the main player, starting its work on a single window with a study on simplifying export and import procedures. In its current project, GTZ proposes to undertake a feasibility study of introducing a single window, seeking money to develop the concept and promoting the idea within the country (GTZ-7). It is supported by ADB which is working on CD of the Customs Department.
- (vi) GTZ is the main player in Uzbekistan. It is developing the concept of a single window with the Ministry for Foreign Economic Relations, Investment and Trade (MFERIT) and the Customs Department (GTZ-8).

51. At a regional level, ADB is currently supporting an integrated trade facilitation approach by, establishing one-stop and single electronic window services in CAREC participating countries (ADB-172)⁹⁶. CAREC plans to follow this project with a small scale TA which would examine, among a number of things, the nature of mandate needed for a single window and the agencies involved, the requirements for a single window in each country and how to meet them and then to prepare a workplan with a timeline for the establishment of a single window. It also plans to test the concept by establishing a single window in one border post processing a high volume of cargo. It might consider the Chu border crossing between Kazakhstan and Kyrgyzstan as discussed in paragraph 50(ii) above. That would produce a useful sub-regional plan to guide future interventions. A second small scale, concurrent TA would evaluate border documents/forms and identify requirements to align them with documents such as the EU single administrative document. The TA also plans to identify common mandatory elements for a single window (ADB-198, ADB-199)⁹⁷. CAREC is also planning a broad based ICT review, part of which will be an examination of the feasibility of upgrading current systems to support a single window and an evaluation of declaration forms for the purpose of introducing a single administrative document (ADB-210)⁹⁸. UNESCAP is also starting a regional based project for landlocked countries which will assist them to work towards a single window based on electronic documentation. In this project, a United Nations Network of Experts for Paperless Trade (UN NEXt) in Asia and the Pacific will be established to build up a regional pool of technical expertise that can support the implementation of paperless trade and a single window in the region (ESCAP-3)⁹⁹. UNESCAP has also a program to run a number of seminars on single window throughout the region for the period up to 2011 (ESCAP-4, ESCAP-5)¹⁰⁰.

c. Procedures

52. CAREC countries have received various amounts of assistance to improve customs and other procedures related to trade:

- (i) At a regional level, TRACECA addressed the question of improved procedures among its members in 2001. It proposed a harmonised list of controls and documents required in respect of transit traffic that conforms to international

norms and satisfies national and regional objectives. It produced a manual for customs officers and a user guide for transport operators and traders and supported this work with on-the-job training and such re-organisation that was needed to introduce new procedures and documents (TRAC-21)¹⁰¹;

- (ii) Across the CAREC region, ADB set out to improve procedures in 2002 with assistance to CAREC countries to simplify and harmonize customs documentation, commodity descriptions, coding systems and practices and to adopt standard and simplified procedures and practices under the Revised Kyoto Convention. It also worked to formulate recommendations to improve the acceptability of the Transport International Routier (TIR) carnet at border crossings and for removal of arbitrary transit fees on key transit routes. This work was followed by a second project which set out to reengineer customs' business practices (ADB-150, ADB-155)¹⁰². These projects have been followed by a current regional project. It is focusing on a number of issues. They include a) harmonization of custom procedures and documentation; b) customs automation; c) data exchange; d) joint customs control; e) supporting an integrated trade facilitation approach through bilateral initiatives, and f) pilot testing and establishing a technical level forum for all agencies involved in providing trade facilitation support in the region to improve coordination and develop good practice models (ADB-172)¹⁰³;
- (iii) Both USAID and World Bank have provided assistance to Afghanistan customs to improve procedures. USAID has provided assistance with systems improvement, introducing a single administrative document for imports, developing a harmonized system for classification of customs goods and delivering a country-wide customs' brokers training program (USAID-38)¹⁰⁴. The World Bank has provided assistance in improving trade and transport documents and procedures (WB-24)¹⁰⁵;
- (iv) EBRD has worked in Azerbaijan assisting with the simplification of procedures to bring them into line with EU and international standards (EBRD-39)¹⁰⁶;
- (v) For Kazakhstan, Kyrgyzstan and Tajikistan, EurAsEc has been promoting simplification of customs procedures and documentation, standardization of electronic forms, transition to uniform administrative records, use of a unified customs database and control of transit trucks and a one stop electronic window. It lacks the funds, however, to support the work with specialist assistance other than through shared training¹⁰⁷. USAID, in addition to supporting the Single Window Working Group, is providing assistance towards the harmonization of customs documentation and transport regulations and simplification of customs

and transit procedures. It also is helping to simplify regulations and instructions (USAID-35)¹⁰⁸;

- (vi) In Kazakhstan, EU/TACIS prepared an overview of current customs procedures, tariffs, insurance, taxation and control mechanisms relevant to transit traffic (EU-19)¹⁰⁹. ADB sought to harmonize customs documentation at the Chu road crossing point with Kyrgyzstan (ADB-3)¹¹⁰. The World Bank, supported by USAID, will consolidate this work. It will also prepare a comprehensive review of legislation leading to the rationalization of all import, export, and transit procedures and documentation across government agencies and that in turn should lead to the development of e-document systems software (WB-29)¹¹¹. The Booz Allen report concluded that there were opportunities for further work on simplifying customs procedures and documentation requirements in Kazakhstan, including the licensing and certification requirements of other government agencies;
- (vii) ADB has supported Kyrgyzstan and Tajikistan to improve customs procedures, harmonizing clearance and control procedures with international standards and procedures in relation to risk assessments and post clearance verification and simplifying transit shipment procedures. ADB has sought to adopt and publicize new customs clearance and control procedures by introducing post clearance verifications based on risk assessments and supported the adoption with a procedural and instruction manual and staff training (ADB-152)¹¹². It has also supported re-engineering business processes to help ensure customs' practices and procedures are in line with international standards (ADB-162, ADB-163)¹¹³;
- (viii) In Mongolia, ADB did some work on enhancing business processes including preparation of a manual (ADB-171)¹¹⁴. It has also set out to expedite a joint processing pilot project between PRC and Mongolia customs authorities to harmonize procedures and provided training in administering those procedures (ADB-47)¹¹⁵.

53. In Kazakhstan, Kyrgyzstan and Tajikistan, there has been in-country support for business process improvement. Azerbaijan, Mongolia, Uzbekistan and Afghanistan do not appear to have received a similar level of support. It might be interesting for CAREC to determine the advantages and respective impacts of regional projects establishing frameworks and country projects following up with the necessary detailed work to implement the frameworks.

d. Risk Management and Post Clearance Audit

54. An important process to expedite customs' clearance is based on risk management and post clearance audit. ADB has financed three projects which addressed various aspects of risk management on a regional basis. The first developed risk management and post entry audit

¹¹⁵ TA 6370REG: Development of Regional Cooperation Programs for Mongolia and the PRC, 2006

capacities and produced a WCO Risk Management Guide to serve as a common framework within which each participating country can develop its own risk management system. The second project assisted with the adoption of risk management based customs control procedures. It developed a regional framework for a risk management system. Both projects included training on risk management. The third project is seeking to address issues of common concern in both risk management and post clearance audit (ADB-150, ADB-155, ADB-172)¹¹⁶. ADB has identified a “baseline of compliance” for traders and sponsored risk management and post-entry audit seminars. Apart from this, almost all the attention in risk management and post-clearance audit has been directed at Kazakhstan, Kyrgyzstan and Tajikistan where USAID, ADB, World Bank and EU-TACIS have been active. Azerbaijan has received some attention with risk management from the EBRD, which assisted Customs to fully implement the currently applicable principles of risk-based customs control and post-clearance control (EBRD-39)¹¹⁷. A USAID project which has just started is to install a risk management module in Afghanistan’s ASYCUDA ICT system (USAID-37)¹¹⁸. Mongolia and Uzbekistan do not appear to have received the same level of donor attention directed at risk management and post clearance audits.

55. In Kazakhstan, USAID assisted with the introduction of a risk management system to streamline import procedures. That led to special Risk Management and Post-Entry Control units being established in all oblast Customs Departments (USAID-15)¹¹⁹. Risk management has been addressed by EU/TACIS. It improved the application of risk analysis and selectivity control in line with international standards at Kazakhstan’s international airports (EU-40)¹²⁰. The World Bank is presently supporting the implementation of new measures of cargo control and declaration processing based on risk management. This support includes implementation of a Risk Management System integrated with the Integrated Customs Information System (TAIS) to build-up experience with risk-management based operations. The World Bank is strengthening post-clearance verification and audit through the development of a risk management system for post clearance verification and post-clearance audit and is providing audit training (WB-29)¹²¹.

56. In Kyrgyzstan, USAID has assisted in having low risk trader designation and procedures introduced (USAID-21)¹²². ADB is assisting the Kyrgyz Customs Department introduce risk management practices at 10 border posts.

57. In Tajikistan, the ADB introduced post-clearance audit procedures based on risk assessments and preferred importers/exporters mechanism (ADB-152)¹²³.

58. In both Kyrgyzstan and Tajikistan, ADB has assisted in the introduction of databases with risk profiles (ADB-152)¹²⁴. It is helping to improve risk management and post-clearance audit procedures through: a) streamlining the examination of documents and merchandise at entry; b) supporting institutional capacity building to adopt risk-based post-transit and post-entry compliance audits; c) developing computerized models to analyze the “risk profiles” of

shipments; and d) establishing standardized procedures for post-clearance audits according to risk profile of shipments (ADB-153)¹²⁵.

59. In Kazakhstan, Kyrgyzstan and Tajikistan, Eurocustoms has provided support for developing a cargo risk management system that provides simplified procedures for low-risk importers, assisted in the implementation of selective passenger inspections. In 2006, it started a project to develop and implement a risk management strategy, set up central risk information and analysis, and develop valuation, origin, classification, and fraud databases. In these countries, it has also helped to develop a post-clearance control strategy, develop a fraud database and financial fraud analysis procedures and train senior and middle management in post-clearance control (EuroC-2)¹²⁶. In the three countries, it has trained senior and middle management in post-clearance control methodology, supported study tours for middle management, and provided a due diligence model to ensure that Customs Departments provide all necessary information to the business community (EuroC-2)¹²⁷. USAID is improving risk assessment and post clearance auditing (USAID-35)¹²⁸.

I. Metrology, Standards and Product Certification

60. A range of projects has addressed aspects of metrology and standards. In Tajikistan, USAID is assisting in the development of a Law on Metrology (USAID-35)¹²⁹. It reorganised the Kyrgyz State Inspectorate on Standards and Metrology (KyrgyzStandard) into the National Institute of Standards and Metrology (NISM) to provide technical services to industry and government in line with international practice. It provided training for 72 technical specialists in government and industry from CARs. The training enabled them to become internationally qualified assessors to perform accreditation of testing and calibration laboratories in full accordance with the International Standard ISO/IEC 17025 “General Requirements for the Competence of Testing and Calibration Laboratories” (USAID-30)¹³⁰. It is also helping to modernize metrology, accreditation and standardization regimes in Kazakhstan and supporting the Central Asian Cooperation on Metrology, Accreditation and Standardization (CAC-MASQ) and other regional organisations to ensure harmonization of procedural and documentary requirements. The World Bank is providing assistance to Kyrgyzstan to help structure and build-up a proposed standards and metrology accreditation body in accordance with international standards (WB-28)¹³¹. GTZ is assisting the Kyrgyzstan government join the Metric Convention as well as providing capacity development for a number of national technical committees for standardization (GTZ-4)¹³². In Azerbaijan, EBRD is strengthening the institutions in charge of standardisation, accreditation, conformity assessment, metrology and market surveillance to integrate them as much as possible within European and international structures (EBRD-38)¹³³. Azerbaijan has also received assistance from the EU as part of a sub-regional project to harmonize standards, rules and practices in the gas and oil sectors (EU-8)¹³⁴.

¹³⁴ 23010: Strengthening Regional Energy Co-operation in Eastern Europe and Caucasus, 2004-2006

61. With equipment, USAID has supplied modern scientific instrumentation and electronic test equipment to the National Metrology Institutes (GosStandards) of Kazakhstan, Kyrgyzstan and Tajikistan. It also arranged for the US Navy and the Boeing Corporation to provide modern scientific instrumentation and electronic test equipment to NISM in Kyrgyzstan in 2004 and 2006¹³⁵.

62. In certification, EBRD is also working in Azerbaijan to strengthen the capacity of the central coordinating body responsible for the regulation and certification of locally produced foodstuffs and other products with a view to ensuring the alignment of local quality standards and conformity certification to European standards (EBRD-38)¹³⁶. In Kyrgyzstan, the World Bank is supporting, on a pilot basis, the upgrading and accreditation of selected laboratories operating in the agro-business and food processing sectors as well as selected certifying bodies in quality management systems and products (WB-28)¹³⁷. In Tajikistan, the International Trade Centre has studied National Quality Infrastructure (NQI) and Regulatory Infrastructure and recommended the splitting of the accreditation function from Tajikstandart with the latter embarking on a major program to upgrade the facilities and national metrology standards in order to support industry and authorities with appropriate metrology services¹³⁸. GTZ, in its current project, is proposing to support Tajikstandart implement ISO 9000-9001 into their procedures and participate at ISO technical committees. It will also assist developing a strategy for NQI which will include a review of legislation to facilitate NQI. In Uzbekistan, GTZ is providing support to improve standardization and certification through adoption of ISO standards and to improve NQI to international standards in respect of export oriented goods (GTZ-8)¹³⁹. CAREC is proposing two regional technical assistance projects. One is to perform a 'gap analysis' of the legal framework and technical and operational capability of certification bodies leading to investment proposals for establishment of development certification laboratories. The second is to assess product certification capability of each country, followed by assistance to close gaps through training and other HRD interventions and the provision of facilities and equipment (ADB-220, ADB-221)¹⁴⁰.

J. Multimodal and Intermodal Facilities, and Logistics Centres

63. All CAREC members are signatories to the Intergovernmental Agreement on the Asian Highway Network. All but PRC are members of SPECA. Azerbaijan, Kazakhstan, Tajikistan and Uzbekistan are signatories of the Agreement on the Trans-Asian Railway Network. This agreement has identified about 25 stations of international importance in the CAREC region which SPECA considers warrant being intermodal points (SPECA-11)¹⁴¹. There might be value in there being considered for adoption within the CAREC framework. UNESCAP has done a number of small studies of intermodal and logistics centre opportunities along its Asian Highway network (ESCAP-22, ESCAP-23, ESCAP-32)¹⁴².

64. There have been a number of regional and other studies of inter or multimodal issues. The Economic Cooperation Organisation (ECO)¹⁴³ has investigated freight forwarding and multimodal transport operations and facilities and made recommendations for improvements to overcome transport bottlenecks, and thereby introduce cost effective multimodal transport operations in the ECO region (ECO-1)¹⁴⁴. TRACECA made a study of railway operations leading to recommendations concerning multimodal transport (TRAC-18)¹⁴⁵ and INOGATE of oil and gas requirements for a multimodal oil transport system capable of carrying 10 million tons of oil or oil products per year, using rail and ports at Aktau and Dubendi (INO-1)¹⁴⁶. At a country level, ADB assessed opportunities for multimodal integration in Mongolia to support seamless freight and passenger transport. It is now assisting with the preparation of a national strategy for promoting multimodal transport in Mongolia. The strategy will include a road map for promoting multimodal transport including the development of a multimodal facility at Zamyn Uud, on CAREC Corridor 4b but not on UNESCAP's intermodal network development. Ulaan Baatar serves as UNESCAP's preferred location (ADB-13)¹⁴⁷. CAREC is proposing three further studies of multimodal facility issues during the period 2010-2013. The first follows an earlier study which evaluated intermodal options of the Osh-Sary Tash-Irkeshtam road and is planned to survey and examine potential logistics sites, facilities, terminals and equipment that could be adapted to produce appropriate intermodal facilities along two CAREC corridors. The second proposes an examination of physical infrastructure, transloading technologies and processes leading to an action plan for multimodal transport in the CAREC region. The third is to prepare a feasibility study of an intermodal logistics park in Ulaan Baatar (ADB-15, ADB-202, ADB-228, ADB-221, ADB-195)¹⁴⁸. The second study might be considered a priority because it has the potential to determine priorities between each of the CAREC corridors. Identifying two corridors would have the advantage of prioritizing rail and road investment priorities. EBRD also has the promotion of multimodal services in Azerbaijan on its agenda (EBRD-22)¹⁴⁹.

65. SPECA currently is encouraging the operationalization of international intermodal transport corridors to and from SPECA countries.

66. On other issues, TRACECA has proposed a draft multimodal transit law as well as providing on-the-job training in international transport law to specialists within each national TRACECA commission (TRAC-24)¹⁵⁰. UNDP is proposing a comprehensive study of international container transshipment stations to promote the development of a multimodal transportation system in PRC (UNDP-16)¹⁵¹. CAREC is also proposing what is predominantly a management study to seek improvements in the competitive capacity, management, technological, logistical and other aspects of cargo delivery by mode of transport in the CAREC

¹⁴³ of CAREC participating countries, Afghanistan, Azerbaijan, Kazakhstan, Kyrgyzstan, Tajikistan and Uzbekistan are members

¹⁵⁰ 2002/027-526: Common Legal Basis for Transit Transportation, 2002-2004

¹⁵¹ UNDP – reported in the New Silk Road Project documentation

region (ADB-213)¹⁵². There might be advantages in having this aspect of multimodal operations also examined in the study described in paragraph 64 above.

67. Logistics and logistics centres have become of increasing interest to donors in the second part of this decade. Early in the decade, TRACECA conducted a study of the logistics of oil transport in Azerbaijan, leading to a specification of sustainable tailor-made oil transport by rail logistics concept, which was to include "one-stop-shopping" for customers and the development of logistics centres and logistics support units (TRAC-23)¹⁵³. ADB also addressed logistics in Azerbaijan, developing a framework and plans for development of an international logistics centre (ADB-29)¹⁵⁴.

68. There has not been much activity regarding logistics centres in CARs other than a TRACECA study which included the preparation of a feasibility study for the establishment of modern logistic centres to consolidate freight, starting with road transport in each of the four countries of Central Asia, including proposals for the location of such centres. This work is to be followed by a second project reviewing logistics capacities leading to an identification of what needs to be done to develop an efficient logistic centres' network along all TRACECA corridors with prioritization as to where the centres should be located (TRAC-4, TRAC-31)¹⁵⁵. The study appears to be part of CAREC's forward planning (ADB-181).

69. In Xinjiang province, ADB provided assistance to help prepare a strategy to develop the logistics industry. The strategy was to address the development of a regional logistics system and matching transportation network centred around Urumqi through a master plan. The work also supported trade logistics development studies for Mongolia and PRC's Inner Mongolia Autonomous Region (ADB-150, ADB-166)¹⁵⁶. A subsequent project formulated a sub-regional strategy for trade logistics development in PRC and Mongolia and assisted the authorities at border towns such as Zhamyn Uud and Erenhot to formulate and implement urban development plans aimed at developing trade logistics (ADB-47)¹⁵⁷. A current project is supporting the improvement of the operational efficiency of freight terminals in Urumqi by introducing a web-based transport logistics system (ADB-174)¹⁵⁸. CAREC is proposing a logistics centre in Khorgas with the latest technology to sustain economic development and trade in the area. The centre is targeted for private sector funding and presents opportunities for the private arms of IFIs to become engaged in CAREC's trade development activities (ADB-197)¹⁵⁹. If the study starts before CAREC's action plan for multimodal transport noted in paragraph 65, it is likely to point that study to the Khorgas route to Europe rather than alternatives through Dostik in Kazakhstan or Torugart or Irkeshtan in Kyrgyzstan.

70. On a regional basis, ADB is currently engaged in assisting the development of efficient regional trade logistics industries including promoting the development of public private partnerships (PPP) (ADB-172)¹⁶⁰. CAREC is also proposing a project to study market demand as a basis for establishing short, medium and long term needs for logistics facilities and

equipment and to evaluate current plans for the construction of logistics centres in a number of locations in Kyrgyzstan, Tajikistan, Mongolia, Xinjiang province and Inner Mongolia (which is not part of CAREC). It intends to develop a list of investment priorities and identify potential sources of finance for construction (ADB-226)¹⁶¹.

K. Transit

71. TRACECA has done a study of transit fees across its rail, road and maritime routes with a particular focus on rail tariffs. The project also sought to improve contact between traders and rail companies by easier access through all freight forwarders, so that there is greater opportunity to establish competitive tariffs for new business (TRAC-22)¹⁶². A separate project catalogued present bilateral and multilateral transport transit agreements applicable to TRACECA states, analysing their impact and recommending appropriate action to adapt or modify them where they are in conflict with TRACECA agreements. It also produced a guide to international conventions and agreements and proposed a draft multimodal transit law and technical standards for road freight vehicle construction-and-use that could be incorporated within the road transport Annexe to the Basic Multilateral Agreement (TRAC-24)¹⁶³. USAID, in collaboration with the World Bank, is also charting the main transit corridors, both road and rail, in Central Asia, including Afghanistan. Its study will show the distance, time and costs associated with moving a truck along each route. The information is being used as a tool to work with transport associations and national regulators to reduce the number and nature of the constraints identified along the routes as well as a source of valuable data to exporters (USAID-5, WB-37)¹⁶⁴. GTZ has done a similar study. CAREC has also recently established a corridor performance measurement monitoring system to generate baseline information on the movement of goods and people along six corridors, using freight forwarders and road carrier associations to collect the information.

72. Some work is being done on developing a guarantee system. USAID is helping to design and introduce a transit scheme and guarantee or insurance mechanisms appropriate for Central Asia and its main trading partners (USAID-35)¹⁶⁵. GTZ is considering a customs guarantees system and electronic payments to be included at later stages of its single window project implementation in Kyrgyzstan (GTZ-5)¹⁶⁶. CAREC is also planning projects to develop recommendations on the feasibility of implementing alternative customs guarantee systems and further steps for development of a customs guarantee system, including those related to the TIR Carnet (ADB-187, ADB-212)¹⁶⁷.

73. In the context of TIR, the International Road Transport Union (IRU) provides obligatory training for all new members. The training is directed at representatives of transport associations, customs and ministries of transport that deal with TIR matters at the operational and management level. The trainees then are responsible for training other people in their organisations. Training includes a grounding in the TIR System, the TIR Convention, the roles and responsibilities of the actors involved, the TIR guarantee chain overview, and a description of a TIR operation (IRU-3)¹⁶⁸. IRU and CAREC are supporting the development of a SafeTIR

¹⁶⁸ http://www.iru.org/index/en_iru_tir_scope_index#

system for Kyrgyzstan¹⁶⁹. USAID has studied the utilization of the TIR System in Central Asia to provide information to produce a transport cost analysis (USAID-31)¹⁷⁰. It is presently supporting the implementation of TIR systems in Kazakhstan, Kyrgyzstan, Tajikistan and Afghanistan (USAID-35, USAID-37)¹⁷¹. In an earlier project, USAID had used IRU to provide training to CARs. This training encouraged customs officers to develop their own staff training programs and to develop TIR application manuals that could be used at each BCP to assist on-the-ground customs officers (USAID-31)¹⁷². PRC is the only CAREC participating country which is not a member of IRU, (Afghanistan is not yet an operational member). ADB is assisting PRC's accession to TIR by providing PRC with access to the experiences of other TIR countries and providing training on customs-related operations (ADB-47)¹⁷³. CAREC is proposing a major review of transit systems among its participating countries. The study would lead to recommendations to address transit difficulties making systems more efficient. It would include coordination in transit countries or the establishment of an association to implement the system. It would also determine the feasibility of implementing a pilot transit system along one corridor based on a one-time customs guarantee (ADB-187)¹⁷⁴. ADB is also proposing a project to address the issue of perceived low TIR acceptance and usage (ADB-173)¹⁷⁵.

74. In Afghanistan, ADB, as part of a study of infrastructure investment options, has recommended specific cost recovery measures (e.g. transit fees and tolls) for infrastructure investments (ADB-157)¹⁷⁶. It provided assistance to strengthen and modernize transit agreements by establishing and supporting the operation of an inter-ministerial permanent commission to review trade and transit agreements and renegotiate them or negotiate new agreements as necessary. It also helped draft a Domestic Transport Law which included provision for transit fees and control of vehicle entry into Afghanistan and temporary storage of goods unloaded from overloaded trucks (ADB-167)¹⁷⁷. USAID is about to start a project which will address TIR issues in Afghanistan (USAID-37)¹⁷⁸. The World Bank provided assistance to develop a transit-related financial and insurance capacity (WB-24)¹⁷⁹.

L. Vehicle Standards

75. USAID is presently supporting the harmonization of vehicle standards, weight limits and measurement systems and the adoption of common standards for vehicle registration and documentation in Kazakhstan, Kyrgyzstan and Tajikistan (WB-24)¹⁸⁰. In Mongolia, ADB supported the establishment of regulations on cross-border vehicles according to international standards (ADB-24)¹⁸¹. CAREC plans a project which will seek a cross border agreement

between PRC, Kyrgyzstan and Tajikistan which will address common requirements for the admittance of road vehicles (ADB-179)¹⁸².

M. Information

76. Availability of information is an important attribute of an efficient trade and transit system. The World Bank recognized this when it recommended that publishing up-to-date border crossing rules and their interpretation needs to be addressed (WB-23)¹⁸³. ADB has established a website to publish all reports on CAREC's trade facilitation program (ADB-150)¹⁸⁴. Being able to obtain all relevant material remains an issue. ADB has also sought to establish an information platform, pilot-tested initially with Kyrgyz and PRC customs and with Kazakh and PRC customs (ADB-155)¹⁸⁵. The platform does not yet appear to have been extended to other countries. In Kyrgyzstan, ADB supported the adoption of new customs clearance and control procedures and having them made publicly available (ADB-152)¹⁸⁶. GTZ has recently established a web site to provide information in English and Russian for exporters/importers concerning trade (export/import) forms, contacts (agencies, addresses, costs), "who is responsible for what" and to provide information or links about relevant legislation and tariffs (GTZ-5)¹⁸⁷. OSCE has recently opened a centre for promoting cross-border trade between Tajikistan and Afghanistan in order to provide information on customs and markets to entrepreneurs on both sides of the border (OSCE-1)¹⁸⁸. For its region, TRACECA has supported the establishment, operation and regular update of a web based centre for Frequently Asked Question (FAQ's), major events of TRACECA and an update of the TRACECA traffic database (TRAC-26)¹⁸⁹. UNDP examined the issue of improved communication and access to information as a means of promoting trade and transit in the Silk Road Region (UNDP-4)¹⁹⁰. In Kazakhstan, EU-TACIS supported the development of an effective state-supported mechanism for attracting private investment for establishment of services to be arranged along international transit highways and the provision of integrated information services on those routes for international suppliers (EU-31)¹⁹¹. CAREC is also planning support to increase the flow of information about trade to assist exporters, importers and the logistics industry in three projects. The first will survey all measures affecting trade and transport and publish them on the CAREC website. The second will compile, document, and publish all import/export trade procedures, rules and regulations and requirements of customs and other government agencies and all other national measures affecting trade like bans, prohibitions, quotas, licensing, technical standards, taxes and fees, finance measures and foreign exchange regulations and publish this information in an appropriate way. The third will document all taxes, charges, fees and payments affecting transporters in each CAREC country and categorize them by type or purpose and will publish the information in an appropriate way (ADB-200, ADB-211, ADB-224)¹⁹². UNDP is supporting

the publication of a series of guides and catalogues for foreign investors and national exporters about Uzbekistan (UNDP-6)¹⁹³. UNDP also plans to gather the forms used in international trade transactions in Kyrgyzstan, together with information on documentary procedures and data elements required in the forms, legislative acts regulating the documentary procedures and business processes. Using this information as a base for a pilot project, it intends to develop a regional web facility for gathering document forms and information exchange on documentary procedures in SPECA countries (UNDP-10)¹⁹⁴. As mentioned in paragraph 38, UNDP also maintains a webpage on IBM programs in the CAR region.

N. Capacity development

77. Capacity development has already been touched on in the sub-sections on WTO accession, IBM and process efficiency. It should be borne in mind that CD is likely to require a long term focus based on a clear change management strategy. That change management strategy needs to be followed consistently unless it proves ineffective. Two projects have made a clear commitment to a change management strategy: the World Bank's Customs Modernization Project in Kazakhstan and ADB's regional Trade Facilitation and Customs Cooperation Project Phase II (WB-29, ADB-150)¹⁹⁵.

78. There have been large projects in most CAREC countries which have had a strong focus on CD. A major focus of the CD has been the development of a central ICT system and human resource development. EBRD has assisted Azerbaijan Customs (EBRD-38, EBRD-39)¹⁹⁶; the World Bank has funded Afghanistan's Emergency Customs Modernization and Trade Facilitation Project (WB-24) and Kazakhstan's current Customs Modernization Project (WB-29); ADB has supported the Regional Trade Facilitation and Customs Cooperation Program and the Regional Customs Modernization and Infrastructure Development Project (ADB-165)¹⁹⁷ in Kyrgyzstan and Tajikistan and the Customs Modernization Project in Mongolia (ADB-171)¹⁹⁸.

79. In its border work, BOMCA has approached training through developing country based training institutes. The programs concentrate on border guards but also train customs officers in specialised activities. BOMCA6 has supported training sniffer dogs, initially at the Kazakh National Training Institute. It has subsequently constructed a dog training centre in Kyrgyzstan (BOMCA-2). BOMCA6 built or renovated training institutes in Kazakhstan, Kyrgyzstan, Tajikistan and Uzbekistan (BOMCA-8). IOM established a Border Guards' Training School in Azerbaijan and developed a curriculum there (IOM-1)¹⁹⁹.

80. CD has addressed a broad range of issues, though there has been a focus on central computer systems, process re-engineering and improving base level skills of customs officers. The principal CD issues addressed include:

- (i) in Afghanistan, USAID has performed a major overhaul of the Customs Department which included reviewing the structure and management of all customs' entities and providing training to existing and new staff members (USAID-39)²⁰⁰. ADB developed training courses to be run by the Customs

¹⁹⁹ IOM: Integrated Border Management, nd

²⁰⁰ Reported in EU's support to Customs Admin in Afghanistan

Training Centre and provided training on corruption issues (ADB-167)²⁰¹. In other agencies, it developed training for Ministry of Commerce staff in trade and facilitation (ADB-161)²⁰²;

- (ii) in Azerbaijan, the ADB made proposals for the institutional strengthening of the Ministry of Transport and the road agency (ADB-29, ADB-30)²⁰³. EBRD has strengthened training capacity, conducted training and provided information to strengthen the proficiency of customs officials based on EU best practice and experience. It also developed a comprehensive education and training strategy on border management, including improved understanding of Schengen rules and standards (EBRD-40)²⁰⁴. WCO has recently produced a technical report with recommendations to facilitate economic and trade diversification/reduce the cost of customs processes and re-engineer the IT system (WCO3)²⁰⁵;
- (iii) in Kazakhstan, the World Bank with WCO is assessing the viability of a Customs Academy and developing a wide range of training courses for customs officials, financial management staff in the Customs Department and in integrated tariff systems, intelligence, investigations, and anti-smuggling functions related to law enforcement. Most importantly it is developing a comprehensive HRM plan (WB-29, WCO-13)²⁰⁶. USAID has provided customs officers with details of Kazakh law and internationally applied mechanisms for enforcement through workshops and specialized training (USAID-11)²⁰⁷. It has also trained both governmental and non-governmental personnel in its reduction of investment constraints (RIC) methodology. The idea is for trained personnel to apply the methodology to reduce administrative barriers in cities and oblasts throughout Kazakhstan. This work has been extended through a multiplication program that is using Kazakh partner associations to train associations in Tajikistan, Kyrgyzstan and Uzbekistan in RIC methodology (USAID-28)²⁰⁸. In Kazakhstan, EU-TACIS has produced a training needs assessment for freight forwarders and a training course in accordance with recommendations of the International Federation of Freight Forwarders Associations (FIATA) (EU-19)²⁰⁹. It had a small project to develop a training needs analysis for the Customs Training Centre and supported some seminars for training trainers (EU-25)²¹⁰. Later it sought to develop an HRM strategy and enhance the training capacity and methods of the CCC Training Centre (EU-40)²¹¹. It also arranged for the twinning of customs operations at Astana Airport with Madrid, supporting the arrangement with training and study tours (EU-26)²¹². It helped develop a code of conduct for customs officers supported by training in the Arusha Declaration²¹³. The EU is

also supporting capacity development within the Ministry of Industry and Trade and the Centre of Trade Policy Development to develop and implement trade policy (EU-14)²¹⁴. Eurocustoms is also providing support in developing modern HRM policies and procedures and providing basic and advanced training on priority customs' topics and training in training centre management (EuroC-5)²¹⁵;

- (iv) in Kyrgyzstan, the ADB is currently supporting the establishment of a fully operational Bishkek–Torugart Road Corridor Management Department demonstrating best practice in effective operation and management of corridor assets (ADB-76)²¹⁶. The US Government provided training for border guards and customs officers on anti-smuggling operations (USG-6)²¹⁷. The US Department of State funded two people from Kyrgyzstan and Tajikistan to participate in an intellectual property course in Hungary run by the US Department of Justice. ADB has provided and continues to provide training on basic computer skills, computer management and maintenance skills, risk management and post-clearance audit and modern customs control practices (ADB-152, ADB-165)²¹⁸. Eurocustoms has provided training in risk assessment, ethics awareness and the revised Customs Code²¹⁹ and EU on the Arusha Declaration (EU-15)²²⁰. USAID is providing capacity development and training to ensure agencies are able to meet their WTO obligations (USAID-35)²²¹. GTZ is providing training on development of technical regulation and their differentiation from standards (GTZ-5)²²²;
- (v) in Mongolia, training has been directed at laboratory officials over the management of toxic waste and other hazardous substances (ADB-171)²²³. WCO has been active providing specialized training and workshops on risk management and post clearance audits and an agreement for the Netherlands Customs Department to provide CD (WCO-22, 24, 25, 26, 27, 28, 29, 31, 32). Despite WCO activities, Mongolia does not appear to have had the same level of CD support as other CAREC countries;
- (vi) Tajikistan very much reflects Kyrgyzstan experience with the conjoint ADB projects providing training on basic computer skills, computer management and maintenance skills, risk management and post-clearance audit and modern customs control practices. ADB also provided 'targeted' training courses, designed curricula in line with international best practice and provided training in using and maintaining customs examination equipment which had been provided

²²³ L 2307MON: Customs Modernization Project, 2005-2010

(ADB-152, ADB-165)²²⁴. USAID has provided customs staff with training in the Arusha Declaration (USAID-35)²²⁵;

- (vii) in Uzbekistan, UNDP has provided training for officials on their new Customs Code (UNDP-7)²²⁶. IFC has provided training for regulatory agencies such as the Fire and Sanitary Inspectorates targeted at inspectors to streamline their work (SECO-1)²²⁷. Uzbekistan also appears to have received less CD assistance than some of its neighbours.

81. In Kazakhstan, Kyrgyzstan and Tajikistan, USAID is training customs and trade officials in aspects of the WTO agreements that are most important for facilitating trade and in basic skills of customs administration, including tariff classification, valuation, and rules of origin (USAID-35)²²⁸. Eurocustoms has supported the development of training centres, trained trainers and also delivered basic and advanced courses to customs' officers (EuroC-10)²²⁹.

82. At a regional level, ADB has provided generalized training to customs' officers (ADB-172)²³⁰. It is currently delivering a broad based set of training modules on trade policy, law and regulation, and border management. There has also been a strong emphasis on general management within a management development program (ADB-178)²³¹. Training on a regional basis has been provided by a number of donors:

- (i) Risk management by the ADB (ADB-150)²³²;
- (ii) operating ICT and communication systems provided to BCPs by TRACECA (for CARs) (TRAC-20)²³³;
- (iii) training courses for business people and business councils in CARs and PRC on trade and transit issues as they affect business (UNDP-4)²³⁴ and workshops on WTO accession by UNDP (UNDP-3)²³⁵;
- (iv) a comprehensive set of training modules for senior and very senior departmental officials responsible for cross-border operations and other transport issues by TRACECA, including supporting the training with study tours (TRAC-1)²³⁶. TRACECA has provided on-the-job training in international transport law to the specialists within each National TRACECA Commission and to members of the legal working groups (TRAC-24)²³⁷. In a current project, TRACECA is extending its work to training establishments, to ensure that teaching staff are familiarised with latest transport planning techniques and tools, investment appraisal

²³⁷ 2002/027-526: Common Legal Basis for Transit Transportation, 2002-2004

techniques and other methodologies including environmental analysis of transport sector investments. Training is enhanced through improved pedagogical skills, teaching techniques and curricula development methods. There is a particular focus on multimodal transport and interoperability to ensure that training institutes and internal departmental training areas are able to deliver 'state-of-the-art' training in these areas (TRAC-5)²³⁸. This project is also to produce an appraisal of the potential for establishing a regional training centre for advanced transport training. The establishment of such an institute might be of interest to CAREC in its development of the CAREC Institute and in extending this work to the non-TRACECA membership of CAREC. TRACECA has provided training to develop expertise in the international carriage of perishable foodstuffs (ATP Agreement), for customs brokers in the new procedures being introduced (TRAC-21)²³⁹, for customs staff in operating the Automated Customs Clearance System (ACCS) installed in a project. For freight forwarders, it has prepared a training needs analysis and comprehensive training materials according to FIATA (TRAC-27)²⁴⁰;

- (v) CAREC is planning to support the strengthening of regional customs educational institutions, translate and adapt WCO training materials and focus on training trainers (ADB-225)²⁴¹, improve skills in supply chain management, particularly for logistics companies, through investigating the feasibility of establishing a training institute specializing in logistics and identifying potential training providers like FIATA before developing training courses (ADB-215)²⁴²;
- (vi) For TRACECA countries except Tajikistan, SPECA is providing training courses on the implementation of trade facilitation standards and instruments on a continuous basis (SPECA-5)²⁴³

83. All the country specific major projects mentioned in paragraph 78 above had a major emphasis on installing a central ICT system to support management, provide a data base, facilitate transactions and provide management information. ASYCUDA was installed in Afghanistan (UNCTAD-1)²⁴⁴, but appears to have been rejected by Kyrgyzstan and Mongolia. In Mongolia's case, it seems it was because of issues concerning post-millennium applicability at the time. Importantly, in Kyrgyzstan and Tajikistan, ADB also supported the development of a master plan for customs automation leading to the development of a unified automated information system (ADB-150)²⁴⁵. Prior to that, in Kyrgyzstan, the World Bank provided a grant to purchase computers and servers at Customs Department Headquarters between 2000-2002 (WB-22)²⁴⁶. TRACECA had a project which set out to design modern integrated border crossing systems based on international standards in collaboration with the national authorities concerned. It specified, procured and installed the ICT and telecommunications equipment necessary and trained operators in their use (TRAC-20)²⁴⁷. Additionally EU-TACIS provided

assistance to Kazakhstan to establish a standard information system and a national transport database for the Ministry of Transport and Communication (EU-19)²⁴⁸.

84. At a regional level, ADB has supported customs modernization for data sharing with the establishment of customs automation systems compatible with each other (ADB-155)²⁴⁹. CAREC is proposing a major regional ICT review with a diagnostic of ICT strategies and a technical evaluation of software, hardware and communications compared with world standard customs clearance and MIS systems. The study is to make recommendations to improve connectivity and would install a database system for collecting trade and transport vehicle data (ADB-210)²⁵⁰. TRACECA is currently reviewing existing transport data collection and information systems and methodologies in TRACECA countries, establishing data collection centres and a data collection strategy and further developing content, on-line access and availability, and a user manual for the TRACECA GIS traffic data base (TRAC-29)²⁵¹.

85. Donors have paid attention to the establishment and development of peak bodies to represent private sector interests in improving the environment for trade and transit. USAID established customs consultative councils in Kazakhstan, Kyrgyzstan and Tajikistan to provide a forum for business interests to raise and resolve issues with customs. USAID has supported the establishment of a sustainable network of business associations with the financial and technical capacity to continue to improve the business environment for its members. Participants were trained to apply USAID's RIC methodology to new partners. Initially, 37 associations were trained (USAID-10)²⁵². USAID's current project is assisting public and private sectors develop capacity to assess trade constraints and conduct economic impact analyses of trade policy options (USAID-35)²⁵³. USAID and GTZ are also supporting regional freight forwarders through consolidated transport and bonded warehousing in Kazakhstan, Kyrgyzstan and Tajikistan (USAID-35, GTZ-8)²⁵⁴. UNDP also supported professional business associations in silk road countries through parallel trade development seminars and ran training courses and workshops on trade/transit issues for business (UNDP-4)²⁵⁵. In Kyrgyzstan, USAID supported the establishment of a customs' brokers' association (USAID-20)²⁵⁶ and ADB did the same in Tajikistan establishing an association which would function as a self-regulatory organization (ADB-152)²⁵⁷. Earlier, TRACECA had supported the establishment of an Institute of Customs Brokers in each country with close links to the Freight Forwarders' Associations established by the previous Trade Facilitation and Legal Framework projects (TRAC-21)²⁵⁸. TRACECA sought to establish freight forwarders' associations in Kyrgyzstan and Tajikistan to be sustainable and provided comprehensive training materials (TRAC-27)²⁵⁹.

O. Overlaps and Gaps

86. Given the number of donors involved in border management and trade facilitation, there is a great risk of overlap and poor integration of assistance. The description in the previous

²⁵⁸ 01-0167: Harmonization of Border Crossing Procedures, 2001

²⁵⁹ TRACECA: Freight Forwarders Training Course, 2005-2007

paragraphs has described a number of instances where multiple donors are involved in addressing a particular activity. There is every probability that they were able to develop synergies. They included:

- (i) both EU-TACIS and USAID working on a Law on Technical Regulations in Kazakhstan;
- (ii) the work of donors on country customs codes and an ADB RETA working across the region on customs codes;
- (iii) USAID working with a specific focus on TRIPS. ADB has run intensive courses on the subject and there have been workshops sponsored by other agencies on the subject;
- (iv) The facilities of the BCPs at Hairatan, Torkham and Shirkhan Bandar in Afghanistan having attention from more than one donor;
- (v) EU/TACIS working to enhance the capacity of the CCC Training Centre in Kazakhstan and the World Bank examining the viability of a Customs Academy. Both organisations also worked on developing training needs analyses, HRM and HRD strategies there;
- (vi) numerous agencies working on a single window. There might be advantage in having a situation analysis of this work so that donors, agencies and countries can work within an overall framework;
- (vii) the work of USAID and the World Bank in Afghanistan to improve customs procedures;
- (viii) a lot of agencies working reasonably independently on border management with an increased likelihood of overlaps or different solutions being proposed for similar issues;
- (ix) agency communication and ICT systems receiving individual attention by donors. There is a possibility of incompatible systems being a consequence. CAREC's proposed Enhancements of the Information Technology Systems and Customs Project is timely, though there might be a strong case for advancing that timing (ADB-210)²⁶⁰.

87. There appear to be a number of potential gaps. What the description in this section appears to have drawn attention to is a significant amount of work or some amount of work in one or a number of countries but not extended to all countries. It suggests progress is not even on a comparative basis across all countries. This seems particularly prelevant in ICT and CD interventions. There might be a case for a CAREC study of the situational analysis kind to determine significant gaps between countries in their improvements to their trade facilitation regimes based on agreed international standards followed by a program of agreed support from CAREC to redress the gaps. One country with significant inefficiencies in trade facilitation could produce substantial costs to a road or rail corridor and impact negatively on that corridor's competitiveness. CAREC's proposed ICT study mentioned in the previous paragraph would partly address this broad issue. Consideration might be given to a broadening of its scope and advancing its implementation date.

88. Border management has been of particular interest to donors. Facilities are built usually funded by a donor with a particular interest. Funding has tended to be provided by donors more

²⁶⁰ REG IP2: Enhancements of the Information Technology Systems and Customs, 2011

interested in border forces than in customs. There is likely to be a question about the functionality of a BCP from a freight processing point of view if it is designed with a priority for border guards. There do not appear to be any basic designs for the lay out of a BCP at a major freight crossing and at smaller ones. There are similar issues about equipment, especially communications and ICT equipment. They need to be compatible not only within the agency concerned and between it and agencies in neighbouring countries, but also with other agencies within that agency's government. In Kyrgyzstan, for example, there is a Kyrgyz government funded project for Kyrgyz Telecom to develop a telecommunications infrastructure for the Ministry of Finance. With between 30% and 40% of government revenue being collected by Customs, compatibility between that technology and the technology provided by the US to Kyrgyz border posts will be important. Similarly, the EU provided ICT equipment to Kyrgyz Customs to be installed in BCPs. If the hardware is not open ended and the software open sourced, there might be subsequent problems with the intercommunicability of the systems with other interested agencies. One matter which did not come up in any project designs was the development of an ICT master plan for a country and at an agency level to ensure compatible architecture, systems and protocols.

89. The delivery of training might experience a number of different approaches. One approach is to develop in-country institutions to deliver training which then become the focus of donor support. A second is for specific training to be delivered by a project without the curriculum being institutionalized in some training establishment or agency training unit. The World Bank in Kazakhstan is working in Customs to a change management strategy and examining the viability of establishing a Customs Academy. TRACECA places an emphasis on training being provided through strengthened regional or in-country training institutes. Such institutes have their own training methodologies and curricula. Project delivered training, on the other hand, might not take cognizance of extant curricula and training methodologies and deliver partly confusing messages. On-the-job training by projects also benefits from being consistent with the messages delivered by training institutions.

90. There are also a number of systems which are proposed for a regional level, but not necessarily adopted by all the countries in the region. For example, Eurocustoms provided support for developing a cargo risk management system that provides simplified procedures for low risk importers at a regional level. In Kyrgyzstan, USAID has assisted in having low risk trader designation and procedures introduced. Both TRACECA and ADB have made major investments in working at a regional level. How far the solutions they propose are disseminated and adopted is not clear. There is conflicting overlap if alternative systems are promoted by a country level project.

91. Information dissemination in a way which is easily accessible to intended audiences, is important. There is potential overlap in this area, which might not be an issue. For example, in Kyrgyzstan, ADB supported the adoption of new customs clearance and control procedures and having them made publicly available. GTZ has recently established a web site to make very similar information available. It is important that there is consistency between these sites in the detail of the information being provided. What also might be of value is information about donor and other development activities being made available to an interested audience in an easily accessible format. With many current activities being directed to process re-engineering and in particular to the processing and design of documentation, changes need to be publicized as quickly as possible so that enterprises and the public can adjust their processes to accommodate the changes and take an opportunity to engage with government to try to influence decisions.

P. Opportunities

92. As argued in the section on roads, consistency in policy development and CD across participating countries might need attention so that similar policy frameworks govern trade management between countries. TRACECA approaches its work on a sub-regional basis and strives for sustainability through institutionalizing much of its CD work. It might be a good model for CAREC. There are probably opportunities for CAREC to build on the broad initiatives started by TRACECA, particularly in harmonization of policies and in a systematic approach to training based on an agreed set of standards and human competencies. Where CAREC has an advantage is that it can follow its regional work with country specific support for implementation.

93. CAREC is proposing a study which might prioritize two corridors. Given the incompleteness of infrastructure improvements along all CAREC corridors (other than those in Mongolia and Afghanistan), the study might warrant priority attention. Prioritization of BCPs would be influenced by such a study. It seems important to ensure that the development of BCPs along corridors does not fall behind road and rail infrastructure investments. Similarly, CAREC has realised the importance of logistics centres and multimodal nodes, but Mongolia seems to have excited the most interest in proposed investment funding. SPECA has a plan for intermodal nodes at railway centres. It is also running container block trains from a number of CAREC participating country centres. These centres might warrant examination as potential locations for logistics centres based around an intermodal node on the assumption that freight volumes warrant such an investment.

94. There have been a great number of studies, especially regional, in the context of trade facilitation, many of which have led to bodies of recommendations about important issues. Much of the information and recommendations are difficult to access. Many of the recommendations might be of interest to CAREC working groups as a set of ideas to consider, some of which might have practical application. Making them available might prove a useful service.

95. There do not appear to have been any tracer studies of the impacts of training, workshops and study tours on the participants, especially those who have attended specialist or management training. One indicator of the effectiveness of training is the subsequent promotions a participant has received since participating in training. A second indicator is how long a person remains in the agency after the training. CAREC might find that there is value in examining how effective training has been and which of the different approaches has proved most effective.

96. Systematizing the provision of training is another area of opportunity. Management training, in particular, is not prominent in projects. It is interesting, for example, that border force management does not receive training in BOMCA programs. Instead, it participates in study tours. CAREC's proposed Regional Customs Training and Development Project seems important in this regard (ADB-225)²⁶¹. There might be a case for advancing its proposed implementation date.

97. IBM appears to be a concept and system which brings together many strands of process re-engineering of trade in transit and of export and import processing. There are opportunities to have a regional review of the approaches adopted in CAREC's participating countries leading to an overall guide of initiatives which would assist in bringing a number of strands together, particularly in relation to non-customs' agencies with responsibility for various aspects of processing freight. Particular attention might be given to establishing communities of interest

²⁶¹ REG TA10: Regional Customs Training and Development, 2011-2013

among participating agencies and in designing efficient geographical architecture for BCPs to enhance efficiency of the various mandatory processes managed there.

98. There are also opportunities for greater involvement of the private sector arms of donors in supporting the development of a number of industries, especially in logistics. Hitherto, many CAREC participating countries have not been viewed as favourable destinations for business on the part of the private sector arms of IFIs. There are opportunities for CAREC to review the causes of these views and seek to address the issues that give rise to them.

99. Other opportunities which might be considered might include systematic support for:

- (i) increasing attention paid to agency capacity in policy development. There are also opportunities to work to greater coordination of policy development under relevant international agreement umbrellas;
- (ii) developing a standardized architectural design and equipment for different levels of BCP;
- (iii) a study of recommendations made in regional studies, especially those by TRACECA and from ADB RETAs to determine how they are processed and the extent to which they are adopted;
- (iv) developing a CAREC strategy for work at a regional level being dovetailed into work at the country level. GTZ's work on more efficient trade facilitation procedures with USAID and ADB might provide one interesting model;
- (v) a study of the opportunities for benchmarking standards, which could be applied to a number of areas including road maintenance and road safety.

Q. Projects

Donor	Country	Donors	Project Name	Code/ID	Outputs	Dates	Budget		
							Donors	Country	
ADB-3	ADB	KAZ	ADB	Almaty Bishkek Regional Road Rehabilitation	L 1774KAZ	iv) a cross-border agreement (CBA) - Harmonized vehicle weights and dimensions and customs documentation v) specific road safety initiatives ratified and implemented by KAZ and KGZ viii) Proposal for “one window” customs clearance being considered by the parliaments of the two countries; ix) National Road Safety Councils established in both countries.	2000-2007	65.00	
ADB-4		KGZ	ADB	Almaty Bishkek Regional Road Rehabilitation	L 1775KGZ	ii) customs facilities at the Akzhol-Chu border point equipped with an automated system for customs clearance, iv) a cross-border agreement (CBA) - Harmonized vehicle weights and dimensions and customs documentation	2000-2007	5.00	
ADB-10		KGZ	ADB	Improvement of Road Sector Efficiency	TA 3531KGZ	Cross Border Agreement i) facilitation of cross border controls; ii) simplified and harmonized customs and trade procedures; iii) automated customs clearance procedures; iv) transport in transit through Kazakhstan; v) shared border facilities and joint border controls	2001-2004	0.44	
ADB-13		MON	ADB	Road Development Project III	TA 3990MON	iv) assess opportunities for modal integration to support seamless freight and passenger transport;	2002	0.60	
ADB-14		REG	ADB	Reassessment of the Regional Transport Sector Strategy	TA 6044REG	i) review the status of regional transport, focusing on main transport corridors linking countries within the region through it to South Asia, links with Russia, PRC, and Iran. ii) identify existing and emerging regional transport issues in the sector - infrastructure rehabilitation and rebuilding, and “soft infrastructure” aspects including policy, institutional, administrative, and procedural impediments to efficient and effective transport, transit and trade within the region and with other main world markets; iii) assess how private sector involvement could be beneficial to transport development. Propose ways in which private sector could become involved and propose measures to be taken by the CARs to promote such involvement.	2002	0.15	REG

TRAC-5		REG	TRACECA	Strengthening of Transport Training Capacity in NIS countries	EUROPEAID /113181/C/S V/MULTI	i) ensure that the teaching staff of transport training entities and students in higher educational transport institutes are familiarised with latest transport planning techniques and tools; ii) ensure that the teaching staff of transport training entities and students in higher educational transport institutes are familiarised with latest investment appraisal techniques and tools including environmental analysis of transport sector investments; iii) transport training is to be improved through improved pedagogical skills, teaching techniques and curricula development methods; iv) departments/chairs for multi-modal transport and interoperability are further developed and enabled to deliver state-of-the-art training contents; v) in-depth appraisal for the establishment of a regional training centre for advanced transport training is elaborated.	2008-	EUR2.00	
TRAC-18		REG	TRACECA	Review of Railway Rehabilitation in Central Asia		i) Recommendations concerning the multimodal transport; ii) Recommendations on harmonisation of standards and operating procedures and interoperability; iii) Recommendations on improvements of border-crossing procedures; iv) Traffic forecasts and tentative prioritisation of recommended actions; v) Technical and economic feasibility study of the following line sections: a. Jalal-Abad – Kara-Su – Andijan (79 km); b. Osh – Kara-Su – Andijan (72 km); c. Lugovaya – Bishkek – Balykchi (322 km); d. Aktau – Beyneu – Kungrad (700 km).	2004-2006	EUR2.00	
TRAC-19			TRACECA	Trade Facilitation Project		Recommendations i) In respect of Customs Border Control Points a. Equal opportunities should exist at all borders for use by any international transporter. b. Customs posts should be refurbished to create a positive image. c. Layout at border facilities should be based on "Form follows Function" principles. d. Refurbishment needs to be prioritised. e. Low traffic volume posts should be upgraded or closed to freight traffic. Shared facilities an option. f. Customs posts at rail crossings should be refurbished	1996-1997

					<p>and secured by long term tenancy agreements.</p> <p>g. Customs posts at Ports should be improved and in some cases relocated.</p> <p>h. Approach roads at major border crossings should be widened.</p> <p>i. Control of commercial activities close to border posts should be strengthened.</p> <p>j. Border Control Zones should have restricted access.</p> <p>k. Road signs should be improved, with possible installation of TRACECA route signs to UN format.</p> <p>l. Regulations should promote the use of Customs approved terminals and bonded warehouses to reduce border work.</p>			
TRAC-19					<p>m. Computerised live-entry Management Information Systems (MIS) should be introduced for planning.</p> <p>n. Staff retention is as important as recruitment.</p> <p>o. Shorter work shifts should be introduced where possible.</p> <p>p. Specialised training is required.</p> <p>q. Key borders should have satellite telephone linkage.</p> <p>r. Customs border posts should have emergency generators.</p> <p>s. More detection equipment, training and systems are required.</p> <p>t. Fewer documentation checks should aim to achieve a target of 5-minute processing time per vehicle.</p> <p>u. All organisations present at border posts should co-operate to achieve faster service levels.</p> <p>v. A prioritised investment programme should be initiated.</p> <p>w. External funding should be sought where required and justified;</p> <p>ii) In respect of Customs Computerisation</p> <p>a. The ERMIS report should be used as a basic source of detail.</p>			

Donor	Country	Donors	Project Name	Code/ID	Outputs	Dates	Budget	
							Donors	Country
TRAC-19					<p>b. There should be a specialist study of power and communications systems so that practical and economic decisions can be taken on computerised developments.</p> <p>c. Seminars should be organised on EDI and computerisation for both Customs and Traders to improve awareness of the potential benefits that can result.</p> <p>d. Input of cargo detail to existing networks should be done at the earliest stage possible. Software to extract specific detail from the data input should be obtained.</p> <p>e. Computer developments should aim for a National Trade Data Transfer System (NTDTS).</p> <p>f. TRACECA countries should co-operate to achieve a harmonised NTDTS, in order to save cost and improve regional compatibility.</p> <p>g. The ASYCUDA system should be considered where no network exists and where another system has been selected or is under consideration, a comparison with ASYCUDA should be made.</p> <p>h. There should be an independent Information Technology Department within Customs, to develop the needs of Customs and their customers, the Traders.</p>			
TRAC-19					<p>i. There should be a review of the manner in which statistics are gathered in relation to an integrated NTDTS and compared to the requirements of the receiving agencies to ensure only useful information is provided.</p> <p>j. When designing the systems architecture for a NTDTS, consideration must be given to establishing a pilot scheme in the main clearance centre in the capital city, leading to full implementation in the main clearance centre and perhaps one regional office. This should be followed by progressive implementation at regional level and then at key borders.</p> <p>k. Compliance with international standards in the completion of declarations and in computer systems and protocols is essential.</p> <p>l. WCO should be approached for assistance in the development of this program.</p> <p>iii) In respect of Trade Documentation and Customs Procedures.</p> <p>a. The cargo declaration should remain the key Customs document in its current form.</p>			

Donor	Country	Donors	Project Name	Code/ID	Outputs	Dates	Budget	
							Donors	Country
TRAC-19					<p>b. The Certificate of Origin should be standardised and consideration should be given to reduce the necessity to use this form.</p> <p>c. All countries should work towards implementing the 1995 TIR convention, and eventually SafeTIR.</p> <p>d. A second type of "Community transit" system should be devised and considered for adoption for traffic movements which cross one or two borders.</p> <p>e. The use of UN aligned commercial documentation should be encouraged, particularly by the relevant trade associations.</p> <p>f. All countries should sign the CMR Convention and actively consider signing the COTIF Convention, as this would formalise the widespread usage of relevant documentation in the region.</p> <p>g. All key international trade documentation should be in two languages, one of which should be English. The second language should be national or Russian.</p> <p>h. National implementation plans should be developed which recognise the different stages of development in the various countries towards reaching a common goal.</p>			
TRAC-19					<p>i. A program of additional technical assistance, particularly in relation to training, should be developed.</p> <p>j. A TRACECA Customs Coordinating Committee should be established to co-ordinate and promote standardisation of Customs documentation and harmonisation of procedures as identified in the report. This should include a senior Customs official from each administration.</p> <p>k. An internal review should be undertaken by each Customs administration of their documentation requirements with the objective of simplification and a reduction in the number of documents required to effect a customs procedure for transit.</p> <p>l. A similar internal review should be undertaken with the objective of reducing the requirement to submit technical certificates and documents at the borders and in connection with a clearance.</p> <p>m. Where a secure transit system is in use, border documentation requirements should be limited to production of the transit document.</p>			

Donor	Country	Donors	Project Name	Code/ID	Outputs	Dates	Budget		
							Donors	Country	
TRAC-19					<p>n. The trend towards a regional clearance system should continue, thus reducing the role of the border post to that of a checkpoint.</p> <p>o. A review should be undertaken as to the role of the internal Customs control points along the roads and at city boundaries with the objective of reducing or eliminating this activity.</p> <p>p. Customs should examine the potential to introduce a pre-entry clearance system to clear goods before they arrive, subject to examination.</p> <p>q. Customs should introduce a "routing" system with clearance without examination on certain traffic based on the principle of risk assessment. This may require strengthening of penalties in some countries to support the system.</p> <p>r. The incidence of convoys should be reduced to essential traffics only and CIS and non-CIS vehicles should be treated identically.</p> <p>s. Customs should promote the establishment or enhancement of Customs brokering services and issue licenses to appropriate individuals and organisations.</p>				
TRAC-19					<p>t. A review should be undertaken of the demand and format of Customs statistics and to which organisations they are supplied, to reduce unnecessary reporting</p> <p>u. When a Community Transit System is agreed, further contacts should be established with banks and insurance companies to determine their ability to provide appropriate transit and transfer guarantees</p>				
TRAC-20		KAZ, KGZ, UZB	TRACECA	Customs Facilities at C. Asian Road Border Crossings	SCR-E/110622/C/SV/WW	<p>i) design modern integrated Border Crossing systems in collaboration with the national authorities concerned, and according to international standards;</p> <p>ii) design interfaces between the border crossings and other necessary centers (e.g. SAFETIR administration in Geneva, inland terminal clearance stations, national centers for statistics and monitoring); to design the remote terminals where necessary;</p> <p>iii) liaise with the EBRD and beneficiaries concerning the customs facilities at the Port of Turkmenbashi, and eventually concerning possible EBRD road investments, presently on hold;</p> <p>iv) specify and procure the IT and telecommunications equipment necessary to equip the border crossings for modern procedures, according to TACIS rules on supply</p>	2001-	EUR2.00

ESCAP-25		AZE, KAZ, KGZ, MON, PRC, TAJ, UZB	UNESCAP	Transit Transport Issues of Landlocked and Transit Developing Countries	JPN02935	Among the disadvantages facing landlocked developing countries, the relatively high transportation costs arising from their geographic position is one of the most serious. These costs are due not only to the greater distances but also to the lack of harmonized policies for transit transport between countries. It has recently been estimated that the average cost of transport for exports from landlocked developing countries are approximately double the cost of transport for developing countries as a group, while a separate economic study by the World Bank argues that landlocked countries are paying around 50 percent more in transport costs than coastal countries, and have up to 60 percent lower volumes of trade. These constraints have a significant impact on patterns of economic development, both in terms of scope for diversification of production and the geographic distribution of economic activities.	2002-2004	0.10

ESCAP-26		AFG, AZE, KAZ, KGZ, PRC, TAJ, UZB	UNESCAP	Facilitation of international road transit transport	CPR03004 , CPR03N04	International road transport greatly stimulates the trade and economic development in the developing countries and the economies in transition. However, it is hampered by complicated and time-consuming documentation and unnecessary transshipment at border control points, which increases transportation cost and time as well as cargo damage. The international convention on transit transport (TIR Convention) provides transport operators and Customs authorities with a simple, cost-effective and safe regime for international transit transport. Adoption of the TIR system could facilitate the international transit transport system in the ESCAP region. Two participating countries of this project are not yet contracting parties of the TIR Convention and six of them recently acceded to the Convention and are implementing the initial stage of the TIR system. The overall transit systems in all the participating countries of this project are not consistent and well coordinated. The seminar being organized within this project will review key issues in transit transport including coordination of transit systems between Central Asia and adjacent countries. It is expected that the other countries will take measures to harmonize and simplify their procedures and documentation for cross-border transit transport through accession to the TIR convention or other arrangements as a result of the project. It is also expected that all collaborating bodies will take collective efforts to assist the participating countries in facilitating cross-border transport in this region.	2003-2006	0.02 + 0.01	
ESCAP-27		KAZ, KGZ, PRC, TAJ, UZB	UNESCAP	Expert group meeting on facilitation of international land transport among the members of the Shanghai Cooperation Organization	CPR04002, CPR04N02	Four of the landlocked countries in Central Asia, namely Kazakhstan, Kyrgyzstan, Tajikistan and Uzbekistan, have signed bilateral or trilateral agreements on cross-border or transit transport with China and Russian Federation respectively. Yet the agreements cannot be effectively implemented due to insufficient experience in formulating the complex arrangements and due to the fact that these agreements do not take into account regional and subregional issues. The members of the Shanghai Cooperation Organization recently proposed to adopt a more subregional and regional perspective. To work towards this, the countries of the Shanghai Cooperation Organization require a good understanding of legal regimes currently applied in the Organization's member countries and best practices in other subregions. The secretariat is undertaking a study to collate	2004-2006	0.03 + 0.02

						solutions. This process will help to formulate recommendations to improve the implementation of the agreements.			
ESCAP-32		AZE, KAZ, KGZ, MON, PRC, TAJ, UZB	UNESCAP	Logistics planning models for enterprises and logistics clusters	AG306001	The 2001 Seoul Ministerial Conference on Infrastructure stressed the importance of development in intermodal and multimodal transport, and the 2003 Almaty Programme of Action accorded high priority to the establishment of dry ports in landlocked and transit developing countries. Today an important issue in the transport sector is the globalization of logistics systems brought about by the increased need to reduce costs and lead times whilst maintaining economies of scale. Customers now require prompt delivery and custom-built products. To remain competitive, manufacturers need to strategically organize a worldwide network of branches, subsidiaries as well as distribution and/or consolidation centres. For this purpose, logistics clusters (or distribution parks) have been established in many maritime countries. These logistics clusters have well-developed logistics infrastructures and relevant supporting enterprises, including logistics and administrative service providers and material suppliers. There is presently a dearth of information on logistics developments, making it difficult for governments to adopt appropriate policies for developing logistic clusters. The present project aims to improve logistic clusters utilising multimodal transport in inland locations in the UNESCAP region. It will examine key logistics clusters in the region and the collaborative logistics business model of Northeast Asia developed by the Republic of Korea. The project will be undertaken with a view of adapting and utilizing logistics cluster concept in establishing and strengthening dry ports, which can be strategically located at key intermodal transport intersections. The project will provide governments with a clear understanding of logistics systems within the supply chain, as well as the underlying factors that drive a company's location decisions. In addition the project will define logistics planning models both for the formation of logistics clusters around seaports and at inland locations.	2006-2008	0.04

WB-36		TAJ	WB	Trade Diagnostic Study	in L 2113REG	Provide sector assessments of trade and transport facilitation, and trade and trade-related policy reforms as required by WTO accession	Ongoing		
WB-37		REG	WB USAID	Regional Trade and Transport Facilitation Study	P103073	Trade and transport facilitation performance measurements of selected transport corridors linking Central Asia through Afghanistan to Pakistan's sea ports, including: monitoring of customs posts, interview of drivers and trip diaries. Performance measurements help identify the main reasons of poor performance, quantify the impacts of these barriers and compare performance of these corridors against international benchmarks. The assessment identifies the key trade facilitation and transport bottlenecks and suggest measures to remove such barriers. Some of the outputs are: i) establishment of reliable baseline data and performance indicators for border management performance and inland customs clearance performance; ii) increased understanding and knowledge of the physical and non-physical barriers to trade and transport, including infrastructure requirements and governance problems; iii) tools such as the corridor monitoring methodology are provided to assist policy makers in streamlining local procedures and optimizing performance with a view to facilitate trade (targeted at border agencies and roads policy makers primarily); iv) priority areas are identified for improving policy and investment decisions in trade and transport facilitation through the use of these tools, including the harmonization of border crossing regulations and legislation across the region; v) local capacity is built to carry out frequent updates, monitor progress over time, and use modern methodological tools to increase transparency in trade-related processes and procedures.	2006-ongoing	0.10 0.35	0.00
