Ministry of Finance of the Republic Kazakhstan

Presentation materials on removing administrative barriers, facilitation of movement of goods and vehicles through the customs border of the Republic Kazakhstan and integrated control arrangements

Astana 2008

The views expressed in this presentation are the views of the author and do not necessarily reflect the views or policies of the Asian Development Bank (ADB), or its Board of Governors, or the governments they represent. ADB does not guarantee the accuracy of the data included in this presentation and accepts no responsibility for any consequences of their use. Terminology used may not necessarily be consistent with ADB official terms.

Existing technology of movement of cargos through the border crossing points (border with PRC)

Disadvantages of the current border control procedures:

- Carrying out of control functions at the border crossing point;
- -Duplication of some operations by controlling bodies;
- Delays related to multiple formal control of documents;
- «vague» responsibility of the authorities for general state of affaires at the border crossing point;
- -Lack of opportunity to ensure full control and coordination by the controlling authorities headquarters in real time mode;
- merging the passenger and transport flows.

Stages of introduction of new technologies

- I. Introduction of integrated control
- II. Setting up the inter-departmental monitoring system on the base of the Operation Administrative Center
- III. Reduction of the number of permits and timeframe for their issuance
- IV. Delegating control functions from the border crossing points (except of the BCS NSC) to the hub terminals and Customs Registration Centers

I stage Introduction of integrated control

Rational for introduction of the integrated control

International Convention «On coordination of border control procedures»

(Republic Kazakhstan has joined according to the 06.05 2002 Law № 320-II)

«Customs may, upon direct authorization by the competent authorities, carry out on their behalf all or some types of control, which the above authorities are responsible for. The authorities must ensure that the customs has been provided with all required facilities.».

Rational for introduction of integrated control

Diagnostic Mission of the World Customs Organization on introduction of the Framework Standards for Security and International Trade Facilitation

November 2006

«We recommend the notion «integrated border management», used by the CCC MF RK, to be included, to a maximal possible extent, to all future governmental and national plans ...».

Goals of integrated control at the border crossing points:

- introduction of the **«one stop shop» and «single window»** principles;
- reduction of the number of authorities located at the border crossing points and delegating their functions to the customs authorities.

Activities for introduction of integrated control

- introducing amendments to legislation of the Republic of Kazakhstan on entrusting customs authorities with the functions of transport, veterinary and phyto-sanitary, sanitary and epidemiological control at road border crossing points;
- seconding the staff from ministries and agencies in the SCC Operation Administrative Center to monitor cargos moved through border crossing points at the borders of the Republic of Kazakhstan.

Stage II. Establishment of an Interagency Monitoring System on the basis of the Operation Administrative Center

- establishment of electronic check points;
- expanding communication channels;
- technical additional equipping of Customs Control Departments and some border crossing points;
- improvement of the existing software;
- expanding the functions of the OAC;
- integration of information systems of concerned state bodies within e-government.

Electronic border crossing point

Automation of each step of processing at the border crossing point

Eliminate filling in the customs document at the border crossing point to control movement in the territory of the RK

Eliminate intermediary services (customs brokers) at the border

Technology:

- 1 automatic entry registration
- 2 radiation control
- 3 measuring vehicle parameters (ASKDT)
- 4 conducting non-intrusive control (IKD)
- 5 registration, document scanning and transfer of all information to the OAC
- 6 automatic exit clearance

Operation Administration Center of the CCC

Using the OAC as a single center for distant monitoring

Perspectives for interaction of the OAC with ministries and agencies

Customs control ☑ Sanitary and quarantine control ☑ Transport control ☑ MIT RK ☑ Road police ☑ MEMR RK ☑

Veterinary and phyto-sanitary control

✓

Perspectives for interaction of the OAC with ministries and agencies

Complete electronic interaction with ministries and agencies

Electronic confirmation of paper documents at all stages of customs clearance with a prospect to eliminate paper documents

Ministries and agencies receive necessary information on imported goods in a real-time mode

Expected outcome

Expanding possibilities for fulfilling control functions by state agencies

Acceleration of customs procedures

Improving efficiency of control over movement of goods and vehicles

Reducing documents needed for control purposes

Improving the quality of services provided to traders in line with international standards

Overall centralization of control over customs clearance

Reducing the level of corruption

Transparency of customs procedures

State III Reduction in the number of permissive documents and time for their issuance

List of documents required for customs purposes for export/import

Kazakhstan vs some countries of the world

Документы, необходимые для экспорта

IV stage (prospect)

Delegating control functions from the border crossing points (except of the BCS NSC) to the hub terminals and Customs Registration Centers

Setting up single customs terminals on the basic routes

Setting up single customs terminals on the basic routes

Goal: providing a set of services in relation to the imported goods

Placing the required authorities, departments and certification authorities for goods processing

Carrying out of laboratory tests by various authorities

Logistic support for goods processing

Banking and broker's services

High quality control procedure by governmental authorities

Improving the level and quality of service provided to the foreign trade operators

Proposed technology for processing of goods at the border crossing points with the highest level of traffic

Proposed chart for the vehicle control

- 3 transfer of information on arrival of vehicles
