

Islamic Republic of Afghanistan

Workshop on Single Electronic Window Development in
CAREC

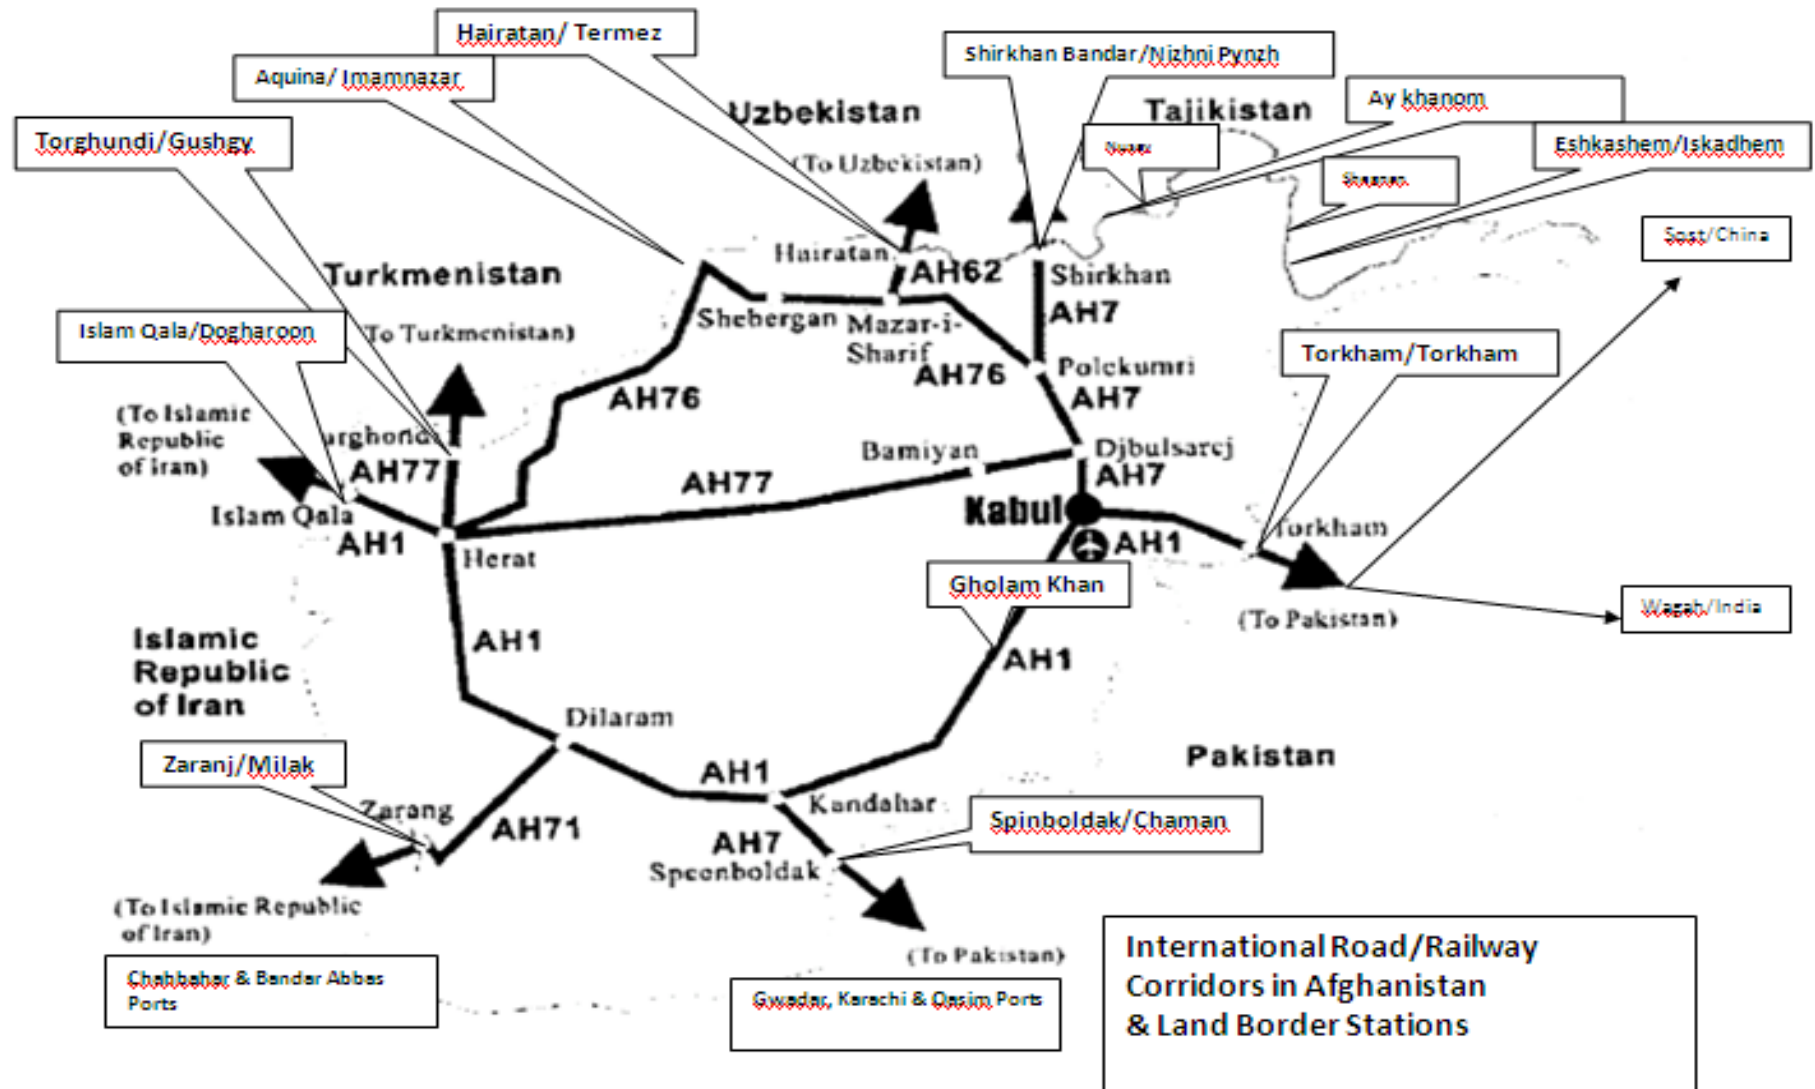

14-17 July 2009, Singapore

Waheedullah Qaderi
Advisor to the Minister
Ministry of Commerce & Industries

Nazir Nazif
Afghan Customs
Department
Ministry of Finance

Afghanistan's Map

(2)

Where Did the Silk Road Go?

3

- Private Power versus Public Power: who is enriched by trade?
- Localised controls over traffic
- The lack of standardised arrangements, in physical, procedural and administrative dimensions
- Who gains from Trade Facilitation?

Rebuilding the Road through Consensus: Regional Agreements on Trade and Transit

4

- Existing Agreements of Afghanistan :
 - Uzbekistan
 - Tajikistan
 - Turkmenistan
- Agreements currently being negotiated by Afghanistan
 - China
 - Pakistan

Ministerial Responsibility for Transit and Trade Facilitation in Afghanistan

5

- Core responsibility is MOCI
- Ministry of Finance is strongly involved, especially for customs and border ports
- Ministry of Transport and Aviation for regulation of services provision and associated conditions
- Ministry of Public Works for physical infrastructure
- Ministry of Interior for border controls
- Private sector is the prime user

Readiness of Afghanistan for Electronic Government

6

- ITU, which publishes data for more than 200 countries, has no figures on Afghanistan
- Approximately 10 % of all Government staff in Kabul may have a computer for work purposes
- If, approximately, we assume there are about 150,000 people in Government, then this would give a Kabul government stock of roughly 15,000 computers
- Elsewhere, including transit points, the stock is far smaller
- Private users interested in transit and trade are relatively more important

Key International Agencies Assisting Afghanistan in Transit and Trade Facilitation

7

- **Physical Infrastructure: ADB, World Bank**
- **Facilitation Procedures: WTO, WCO**
- **Customs Procedures: WCO, UNCTAD**
- **Scope for Electronic Upgrading: ITU**

Challenges and Trade Barriers in CAREC Countries

8

- Trade Taxes (export, import, and other trading restrictions)
- Border and Trade Transit impediments

Afghan Customs Department (ACD)

Towards SEW

9

- Adoption of Automated System (ASYCUDA)
- Development of IT Infrastructure at Customs Offices & border stations
- Automated link with Bank, traffic authorities e.t.c
- Standardization of Customs Procedures
- Signing MOUs with Border authorities.
- Implementation of one stop show at Kabul Airport for exports.

ASYCUDA Potential Benefits

10

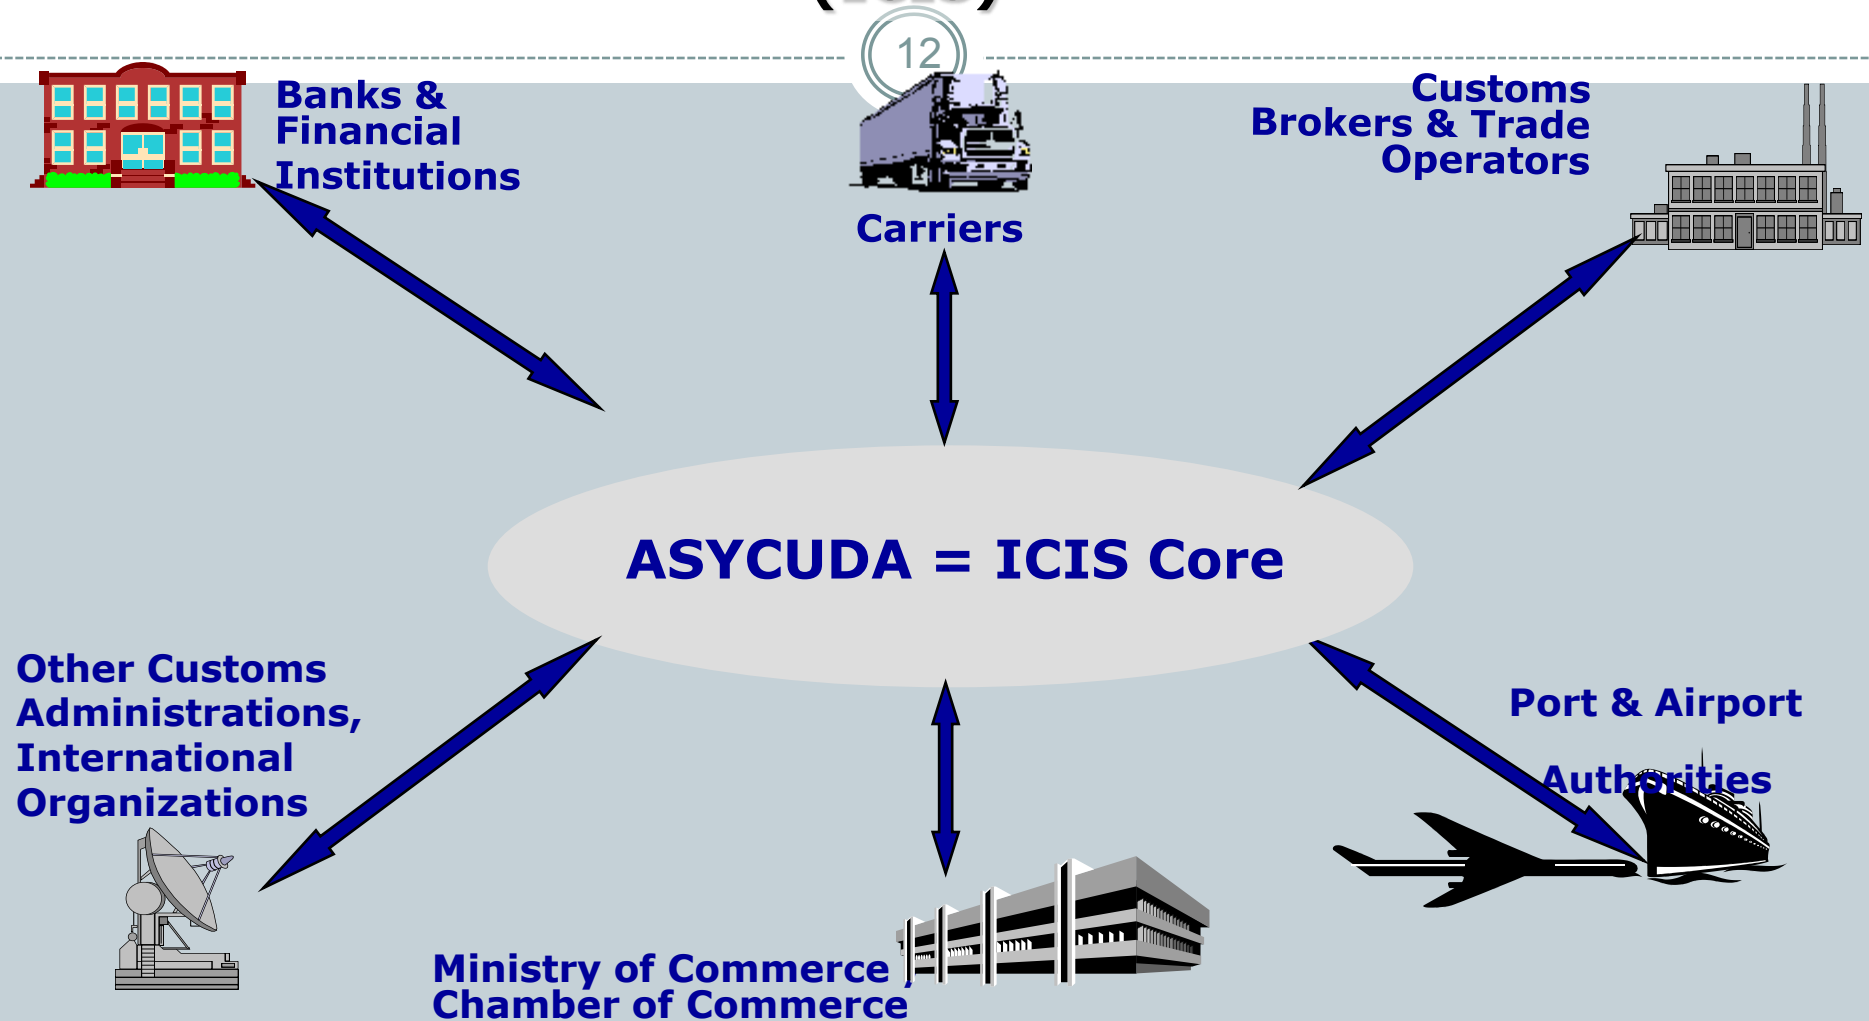

- Reduced / simplified number of documents;
- Streamlined, transparent procedures;
- Equitable decision making;
- Improved clearance times;
- Reduced trade costs;
- Timely and reliable trade statistics.
- Possibility for Trade Data Exchange
- Uses, HS Tariff, UN Layout Key & ISO standards.

ASYCUDA & Single Window Approach

11

- **Complete Customs Automation Solution (Import , Export , Transit)**
- **Full DTI (Direct Trader Input)**
- **Registration of Traders**
- **Bank & Payments**
- **Possibility of sending EDI Messages**
- **Implementation of SAD**

Integrated Customs Information System (ICIS)

Towards a Road Map for SEW: The Six Challenges

13

- The Communication Challenge: how to bring potential users (traders) and the operators (government) into a common effort
- The Investment Challenge: how to identify and carry out the most useful investments in equipment and physical facilities
- The Institutional Challenge: how to create proper governance structures among the Ministries involved in Afghanistan
- The Capacity Development Challenge: how to build up the skills required to operate and manage an SEW system
- The Regional Cooperation Challenge: how to work with neighboring countries to create a smooth system
- The Trust Challenge: how to move towards a faster, lower cost, and potentially safer trade facilitation environment in a region where mistrust has marked contemporary history

Thank You for Attention
