

Development & Application of E-Port in China

**——Workshop on Single Electronic Window Development
for CAREC**

**Wei Yuan
Department of S&T Development, GACC
Office of National E-Port Committee**

Contents

I. Current Status of E-Port

II. Case Study

III. Future of E-Port

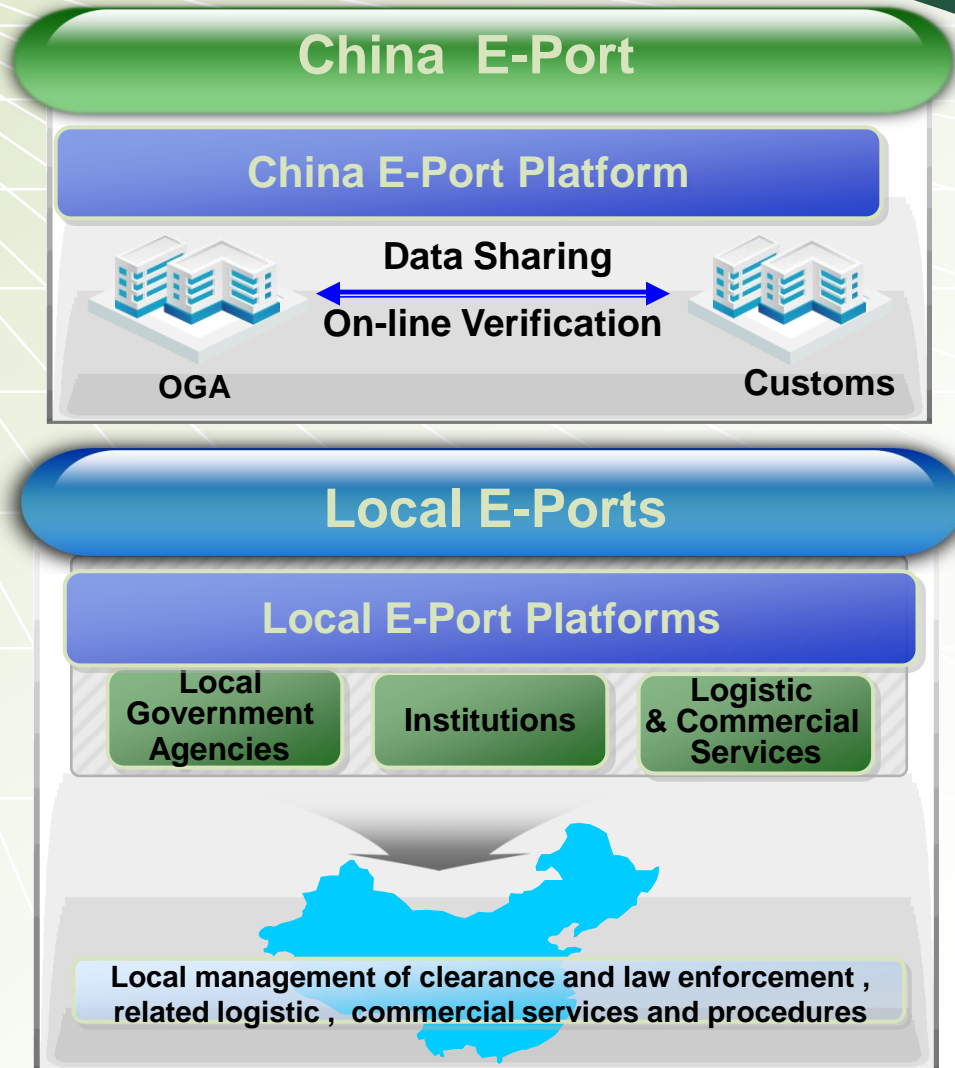

I. Current Status of E-Port

China E-Port was born in 1998, about 10 years old. After going through 3 stages of development over the last decade, it's already the most important component of the computerization effort at ports of China.

China E-Port went through 3 stages of development

What's E-Port supposed to be?

Mechanism of E-Port Management

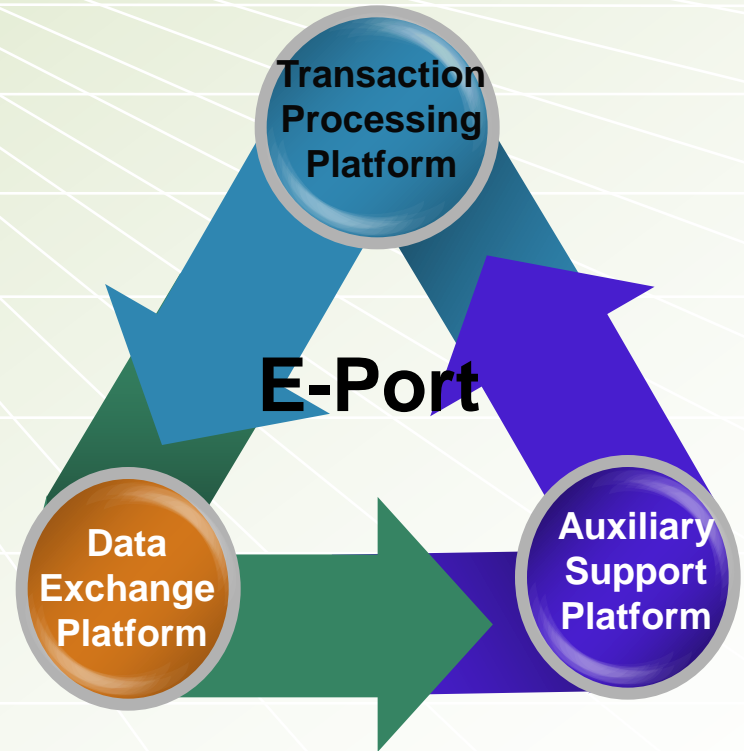

- Chinese government has established the National E-Port Coordinating and Steering Committee, coordinate the resolution of major issues during the building of E-Port.
- Administrative office under this committee to be responsible for its day-to-day affairs.
- Dedicated body to build the E-Port Systems. It is responsible for the design, development, daily operation, maintenance and management of the E-Port systems and networks.

Architecture of E-Port

E-Port comprises three components

Data Exchange Platform	Data exchange and sharing among government agencies
Transaction Processing Platform	Transaction Processing Platform oriented towards enterprises, which offers a Single Window to them
Auxiliary Support Platform	Provide information services for government agencies

Data Exchange Platform

Data Exchange and Sharing

- Among port management agencies
- Between import & export enterprises and government agencies
- Between Chinese port agencies and overseas governments

Data Conversion

- Message exchange
- Data-code conversion
- Standard Data elements

Transaction Processing Platform

A circular logo with a blue gradient and a white border, containing the text "Transaction Processing Platform".

Transaction Processing Platform

E-Port has optimized and integrated the processes of separate declaration functions originally offered to import & export enterprises by various government agencies and logistic enterprises. through this holistic Single Window, enterprises can enjoy more facilitative and more efficient “one-stop” services.

Major Function

- Enable enterprises to declare to government agencies electronically
- Government authorities can provide feedback to enterprises regarding the processing status and result of the data

Ways to Submit Data

- Standard message interface for electronic data exchange
- Standard client-end declaration software
- Declaration services based on the Internet

Auxiliary Support Platform

A circular logo with a dark blue center and a white border. The text "Auxiliary Support Platform" is written in white, bold, sans-serif font, centered within the circle.

Auxiliary Support Platform

- **Accelerate the overall process of computerization for Chinese ports, this platform provides the government agencies having such needs with the project design, development and resources for operation of the relevant systems and networks, sometimes even technical support for the daily operation and maintenance.**
- **In light of the demand of enterprises and the requirements of national port management, the Chinese government is able to develop some Single Window application projects within a short period of time, which both benefit enterprises and meet the needs of government controls.**

E-Port's Status of IT Application

1. Government Agency-to-Agency (G2G) Connections

Realized information sharing with **11** government agencies; Accomplished **17** networking application projects; Realized the information sharing and interchange between the **35** local E-Port and China E-Port .

2. Business-to-Government (B2G) Connections

470,000 traders are declaring to government agencies through China E-Port to do business in import, export, processing trade and provide intermediary services. They also use E-Port for information inquiries.

3. Business-to-Business (B2B) Connections

Traders engaging in import, export or logistics, carriers and agent companies are exchanging information through the VPN of China E-Port.

II. Case Study

Total Revenue
Collected:
916 billion CNY

Amount Paid
On-line:
**337.5 billion
CNY**

In 2008, using E-Port, import and export enterprises paid a total of **337.5 billion CNY** of customs duties, taxes and charges to **13** commercial banks. This amount accounted for **36 percent** of the total revenue collected by China Customs in that year.

III. Future of E-Port

E-Port

National Single Window Development

A unified clearance information platform combining both local management of clearance and law enforcement, and related logistic and commercial services and procedures, will be built so as to provide holistic single window services.

International Single Window Cooperation

To realize information exchange and sharing between single windows of China and other countries.

National Single Window Development

(1)

It should realize a real holistic Single Window oriented towards enterprises and provide “one-stop” services for clearance.

(2)

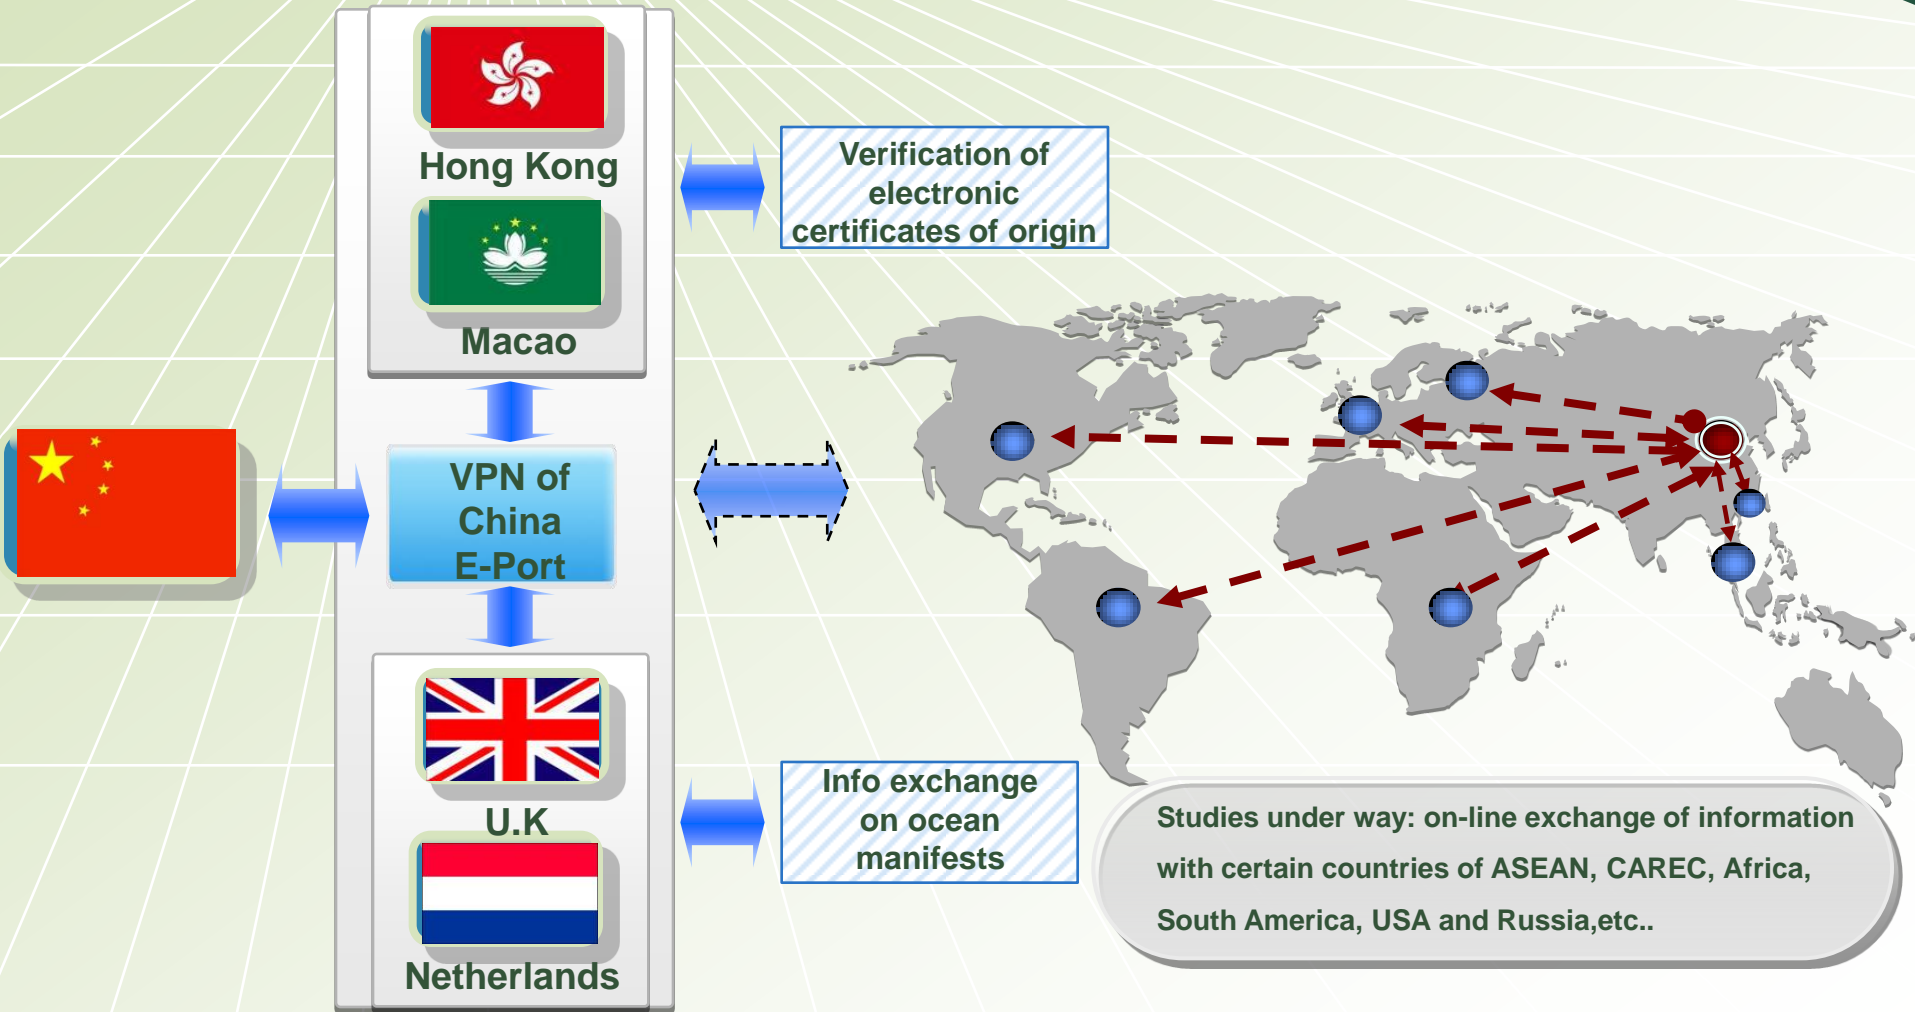

It should further enhance information exchange & sharing among different government agencies and strengthen the multi-use of data.

(3)

It should promote interconnection between local E-Ports and advance development of local economy and logistic services.

International Single Window Cooperation

Connections between China and other economies

Connections between China and international organizations

Follow up and take part in designing WCO data model version 3.0. and promote the usage in China.

Join the APEC single window working group, study the holistic programming and implementation plan of it and advance the application of single window in Asia and the Pacific.

Wish Workshop on Single Electronic Window Development for CAREC a Great Success!
